WHEREAS, the applicant requested reopening of this application and amendment of the Resolution adopted March 19, 1957 by eliminating therefrom the alteration to the first and second floors and confine the work to the basement and removal of the first floor beams and flooring; and

WHEREAS, this application was reopened on July 21, 1959 and set for hearing on September 15, 1959 at 10 A. M., subject to regular procedure, waiving all requirements except a new decision of the Borough Superintendent and two publications in the Bulletin; and

WHEREAS, a public hearing was held on this application on September 15, 1959 after due notice by publication in the Bulletin; and

WHEREAS, the decision of the Borough Superintendent, dated July 9, 1959 acting on amendment to Alt. Applic. No. 1092-56, reads:

"The omission of proposed work on the 1st & 2nd floors of No. 169 Henry Street is not in accordance with BS & A Res. Cal. #752-56-BZ and Cal. #753-56-A and must therefore be referred back to the Board of Standards & Appeals."

Resolved, that the Board of Standards and Appeals does hereby amend the resolution adopted on March 19, 1957 by adding thereto:

"in the event the owner desires to perform the work in accordance with drawings filed with this application dated July 29, 1959, 3 sheets, such changes may be permitted and the alteration to the first and second floors may be omitted on condition that in structural matters and in all other respects all laws, rules and regulations applicable shall be complied with; that all permits shall be obtained and all work completed and a certificate of occupancy obtained within the requirements of Section 22A of the Zoning Resolution."

* Correction—In the resolution the date of the drawings is changed from "July 14, 1959" to "July 29, 1959."

RULES

RULES RELATING TO SMOKING IN PROTECTED PORTIONS OF FACTORIES, AND IN SPECIAL CLASSES OF OCCUPANCIES.

Adopted by the Board of Standards and Appeals August 13, 1918, effective September 9, 1918, under the powers conferred upon the Board by Section 718-a, Subsections 2 and 3 (Old Charter) to supplement Section 283 of the Labor Law (Old Section 83c).

[Cal. 1262-18-SR]

Labor Law

Section 283. Smoking.

1. No person shall smoke in a factory. A notice of such prohibition stating the penalty for violation thereof shall be kept posted in every entrance hall, elevator, stair hall and room of a factory in English, and in such other languages as the fire commissioner of the city of New York in such city and elsewhere the commissioner shall direct.

2. The board in its rules may permit smoking in protected portions of a factory, or in such classes of occupancies where in its opinion the safety of the employees will not be endangered thereby. The fire commissioner of the city of New York in such city and elsewhere the commissioner may issue such permits in accordance with rules adopted by the board.

3. The fire commissioner of the city of New York in such city and elsewhere the commissioner shall enforce this section.

RULE 1. Permit.

(a) **Prohibition.** No person shall smoke, or carry a lighted cigar or cigarette in any factory as defined in Article 1, Section 2, of the State Labor Law, nor in any portion of a factory, within the City of New York, except in such protected portions or special classes of occupancies as are specified in Rule 2 of these rules, and then only after the issuance of a permit by the administrative official.

It shall be the joint and several duty of the owner and of the lessee or lessees of the building containing such factory or factories to cause to be posted in each and every entrance hall, stair hall or room throughout the building, as well as in every elevator car, in English, and also in such other language or languages—as the administrative official shall direct, a notice of such prohibition, and the penalty for its violation.

(b) **Application.** Application for such permit shall be made only by the owner of the building on suitable blank forms to be furnished by the administrative official.

(c) **Time Limit.** Such permit shall be for a definite period, not exceeding one year, and shall not be renewed upon the expiration until a reinspection of the premises for which it is issued has been made for the purpose of determining whether existing conditions warrant a renewal.

(d) **Conditions.** The permit shall state the conditions under which the hours between which, and the place or places in such factory where smoking may be permitted, and this

permit shall be framed and kept posted in a conspicuous place in the factory.

(e) **Revocation.** Violation of any of the conditions specified in the permit in addition to incurring such penalties as are prescribed by law, shall be full and sufficient cause for the revocation of such permit by the administrative official, and shall not again issue a permit for the same premises until at least one year has elapsed.

Rule 2. Permissible Cases.

Smoking may be permitted in:

(a) Factories engaged in the manufacture of cigars, cigarettes, or smoking tobacco, when necessary for the efficient conduct of the business, provided that:

(1) No smoking other than that for sampling, testing and experimental purposes is carried on.

(2) Such smoking is conducted in a room provided especially for that purpose, separated from the rest of the building by fireproof or fireresisting partitions, with all openings therein protected by selfclosing fire doors, and further, unless the building is of fireproof construction or provided with an approved automatic sprinkler system, the floor and ceiling of such room shall be covered with fire retarding material.

(3) Such chemical fire extinguishers as the administrative official may direct are installed.

(4) All waste paper and other inflammable waste materials are deposited in fireproof receptacles.

(b) Factories devoted entirely to one of the following occupancies:

Blacksmithing or horseshoeing;
Boiler making;
Brick, terra cotta or artificial stone works;
Forge shops;
Foundries;
Iron, steel, brass or copper works;
Machine shops;
Smelting;
Stone or monumental works;

provided that in any case:

(1) The building is not of wooden construction;

(2) Such chemical fire extinguishers as the administrative official may direct are installed;

(3) All waste paper and other inflammable waste materials are deposited in fireproof receptacles.

PUBLIC HEARINGS

Tuesdays at 10 a.m. and 2 p.m.
Special meetings as published in this Bulletin.
All hearings are held at 80 Lafayette Street, 9th Floor, Borough of Manhattan.

HOURS OF CONSULTATION

10 A.M. to 1 P.M.

Any person desiring to consult the Chairman, the Commissioners, Director or the Engineers, pertaining to the work of the board, will be seen only between the hours of ten in the morning and one in the afternoon—Saturdays excepted.

NOTICE

In accordance with sound management practice and due to budgetary limitations, two changes have been instituted in the Bulletin of the Board of Standards and Appeals. These changes, in compliance with the requirements of Chapter 27, Section 665 of the Charter of the City of New York and the rules of the Board, are as follows:

1—CALENDAR: Notices of public hearing on applications for zoning variances will be published twice: first publication, listing new cases set for hearing, in the Bulletin available to the public at least 14 days before the date of hearing; second publication, in the last Bulletin available to the public immediately prior to the hearing date. The second publication will be augmented with a listing of cases laid over from previous hearings. Attention is directed to the MINUTES of such previous hearings, where the reasons for laid over cases will have been published. Notices of public hearing on applications for approval of materials and appliances will be published once, at least 10 days prior to the hearing date.

2—MINUTES: The publication of the "digest" of the applicant's statement has been discontinued, except that the administrative orders, decisions, etc., which are the subject of each application or appeal will be published. The summary of information given in the Appeal Form (Form A) shall be published for Administrative Appeals. The Board will continue to publish such other matters as it may deem advisable.

RULES OF PROCEDURE

Rules of Procedures of the Board of Standards and Appeals adopted February 15, 1927, amended December 2, 1930, April 14, 1931, June 13, 1933, April 30, 1935 and revised September 22, 1959, effective October 28, 1959.

(89-27-SR)

ARTICLE I—PUBLIC HEARINGS

1. Regular sessions designated as public hearings of the Board of Standards and Appeals shall be held on Tuesday of each week at 10 A. M. and 2 P. M., and such additional sessions on days to be set by the Board and as may be deemed necessary to facilitate the work of the Board.

2. Sessions shall be devoted to hearings on applications for variances of the Zoning Resolution; appeals from administrative orders or decisions; applications for variances of the Labor Law, Multiple Dwelling Law or Multiple Dwelling Code; applications pursuant to the General City Law; applications for approval of appliances, materials and methods of construction and consideration of rules and such other matters coming before the Board. Such sessions shall be published in the Bulletin of the Board of Standards and Appeals.

3. Special sessions may be called by the Chairman or at the request of three Commissioners, provided that notice is given to each Commissioner at least twenty-four hours before the time set for such session.

4. All hearing sessions shall be open to the public.

5. A quorum of the Board of Standards and Appeals shall consist of three Commissioners.

6. The Commissioners of the Board shall attend sessions in person, except that, during absence or disability, a substitute may act as provided by law.

ARTICLE II—CASES BEFORE THE BOARD

1. Every application under the Zoning Resolution, every administrative appeal, every application pursuant to General City Law, Multiple Dwelling Law or Multiple Dwelling Code or Labor Law, and every application for approval of any materials, appliances or methods of construction shall be made to the Board on the forms provided, and shall include the data required in such forms as to supply all information necessary for a clear understanding by the Board, the Director and the staff. The statements of essential information made by the applicant and the determination of the Board in each case will be incorporated in a resolution formally adopted and published in the Bulletin of the Board. Officials, who are charged with the enforcement of the laws, ordinances and rules relating to buildings in the City of New York shall be bound by resolutions and, before granting a permit or taking any other action, shall see that there are no misstatements as to facts and that the conditions of the resolution are observed. Any administrative official discovering any misstatement of essential information is required to notify the Board, in order that it may take such actions as the circumstances require.

2. Any communication purporting to be an application or appeal shall be regarded as a mere notice of intention to seek relief and shall have no force or effect until it is made in the form required, except as provided in Article VI.

3. Upon receipt of any such communication, the writer shall be supplied with the proper forms for presenting his application or appeal and shall file the proper form and furnish all necessary data within thirty (30) days of the date of the order or decision appealed from, except as provided in Article VI. Before such appeal or application is docketed and Calendar number assigned, he shall pay the prescribed fee.

4. A copy of each administrative appeal form required by this article shall be forwarded by the applicant, immediately upon compliance with Subdivision 3 of this article, to the administrative official from whose order or

determination the appeal is made. When such application is filed pursuant to the General City Law, a copy of each application and plans relative thereto shall simultaneously be served on the President of the Borough in which the premises are located. Proof of such service shall be filed with the Board.

5. At the public hearing of a case before the Board, the applicant shall first present the argument in support of the case and those in objection shall follow. To maintain orderly procedure, each side shall proceed without interruption by the other.

6. Every person before the rostrum shall abide by the order and direction of the Chairman. Discourteous or disorderly conduct shall be regarded as a breach of his privileges and shall be dealt with as the Chairman deems proper. Subject to the direction of the Board, the Director shall enforce these rules and supervise the Sergeant at Arms in maintaining order and decorum in the hearing room and lobbies during all public hearings.

7. Commissioners shall not proceed to question or discuss an issue, put a motion or offer a resolution until they shall have addressed the Chairman and shall have been recognized by him. During the progress of the roll call, no Commissioner shall leave his seat.

ARTICLE III—THE CALENDAR

1. Each case filed in the proper form, with the required data, shall be numbered serially except that, when a new case is filed for the same premises as a disposed-of case and the Board so directs, the original calendar number may be used and, in addition, the case shall be termed Volume I, II, or III, etc., as the case may be.

The Calendar numbers shall begin anew on January 1st of each year, and shall be hyphenated with the number of the year and the initials indicating the character of the case.

2. As soon as a case is filed and fee is paid, it shall receive a calendar number, be placed on the docket and referred to the examiners for review. When the examiners find that the applicant has properly completed his application or appeal, the applicant shall be notified of the date on which his case will be set for public hearing.

3. Each case, other than the Special Order cases, shall be listed by Calendar number and premises in the Hearing Calendar printed in the Bulletin of the Board, under the title of the respective proceedings and the date for which such case has been set.

4. The Special Order cases shall consist of applications for any extension of the time to complete the work, for any extensions of the term of the variance, for the restoration of a case to the docket, for any amendment to the resolution or for any other action in any matter coming before the Board.

ARTICLE IV—DISPOSITION OF CASES

1. The final determination of any application or appeal before the Board shall be in the form of a resolution either reversing, varying or modifying the order, requirement, decision or determination appealed from, granting the application or appeal or affirming the order or decision and denying the application or appeal, or dismissing the application or appeal for lack of jurisdiction or prosecution. The concurring vote of three Commissioners shall be necessary to a decision. If a resolution fail to receive three votes in favor of the application, the action will be deemed equivalent

RULES OF PROCEDURE

to a denial and a resolution denying such application or appeal shall be formally entered on the record unless there be a Commissioner absent at the roll call and the vote of the absentee added to the number of votes for the application would be equal to three, in which case the matter will be laid over for consideration and final determination.

2. With the consent of the Board, any applicant may withdraw his application or appeal at any time prior to determination thereon, but, if a motion has been made, and be pending, such motion shall have precedence.

3. No application or appeal which has been dismissed or denied can be considered again except on a motion adopted to reconsider the vote or to restore to the Calendar.

4. No request for a re-hearing will be granted unless substantial new evidence be submitted or an application be filed under a different provision of the law. If, on motion of a Commissioner, adopted by three affirmative votes, the request is granted, the case shall be put on the docket and calendared for rehearing.

In all cases the request for rehearing shall be in writing, reciting the reasons for the request, and shall be accompanied by the necessary data and diagrams. Such request shall be filed with the Director who shall set a date when the request for restoration to the Calendar shall be submitted to the Board, of which date the person making the request shall be notified.

5. The Board may, on the motion of any Commissioner, review any decision that it has made and may reverse or modify such decision, but no such review shall prejudice the rights of any person who has in good faith acted thereon before it is reversed or modified.

ARTICLE V—ZONING APPLICATIONS

1. No application for a variance or modification of the provisions of the Zoning Resolution shall be entertained by the Board except in a specific case, and from an order, requirement, decision or determination made by the Commissioner of Buildings or any Borough Superintendent of the Department of Buildings, on the ground that the proposed plan or use violates the Zoning Resolution, except when the Board has original jurisdiction.

2. No such application shall be entertained unless the application is filed within thirty (30) days from the date of the action of the Commissioner of Buildings or any Borough Superintendent of the Department of Buildings.

3. Every application shall be made on Form BZ and shall be accompanied by all the data required by such forms, and shall be considered subject to such rules as the Board has adopted or may adopt under the Zoning Resolution.

4. As soon as any application is completed by the filing of the data required in Form BZ and payment of the prescribed fee, the case shall receive a calendar number. After a review of the application by the Examiner, the applicant shall be notified by the Director on Form 6CC of the date set for the Public Hearing, which shall be at least thirty (30) days after the mailing of said notice. With this notice, the applicant shall be supplied with an official copy of Form 7NO, which he is required to send, **NOT LESS THAN TWENTY (20) DAYS PRIOR TO THE DATE OF SUCH HEARING**, to every property owner entitled to notice of the application. Five (5) days prior to such hearing date, the applicant must file a verified statement that he has so notified each such property owner either by personal service or by registered or certified mail. Not less than fourteen (14) days notice of the said hearing shall be given by publication in the Bulletin of the Board.

5. On the date set for the Public Hearing, the applicant, owner, his architect, engineer, agent or attorney shall state his case; then the opposition shall be heard, and both shall have an opportunity for rebuttal.

6. Any application that has been denied after a Public Hearing cannot be reheard except on new material facts or under a different section of the Zoning Resolution.

7. Property owners in the affected area of the zoning application may appear at the Public Hearing and voice their objections in person, or by agent or attorney. Each person shall give his or her name after being recognized by the Chairman, the block and lot of the property owned by him or her and then briefly state his or her objections. In lieu of a personal appearance, or by an agent or attorney, he may file his or her views in writing on Form 9C, which is obtainable at the offices of the Board. Briefs will be accepted only if filed at least five (5) days before the Public Hearing.

ARTICLE VI—APPEALS

1. No appeal from any order, requirement, decision or determination of the Commissioner of Buildings, or any Borough Superintendent of the Department of Buildings or the Fire Commissioner or from any rule or regulation relating to the construction, alteration, demolition, structural changes, equipment, occupancy or use of any building or structure or premises under the Charter or the General City Law or any other law under which the Board has jurisdiction shall be entertained unless such appeal is filed on Form A with all the data required in such form, within thirty (30) days from the date of the order, requirement, decision or determination, appealed from, except that minor appeals from orders or decisions may be filed on Form A accompanied by a written description of the premises and a copy of the order or decision. What constitutes minor appeals from orders or decisions shall be determined by the Director.

ARTICLE VII—LABOR LAW VARIANCES

1. No application for a variance of the Labor Law, or of any rule adopted thereunder, affecting the demolition, construction or alteration of buildings, exits therefrom, the installation of fixtures or apparatus, as authorized by Section 666 of Chapter 27 of the New York City Charter, shall be entertained unless it is made on Form A, with all the data required on such form within thirty (30) days of the date of the administrative order.

ARTICLE VIII—MATERIALS, APPLIANCES AND METHODS OF CONSTRUCTION

1. No application for and approval of a material, appliance or method of construction shall be entertained unless it is filed on Form SA/SM, with all the data required.

ARTICLE IX—ADOPTION OF RULES

1. No application for the adoption or amendment to any of the rules of the Board shall be entertained unless the application is made in writing.

2. No proposed rule or regulation or amendment thereto, originating with the Board or submitted to the Board for adoption, shall be published in the Bulletin, until such publication is authorized by at least three (3) Commissioners.

3. No resolution of the Board of Standards and Appeals adopting or amending any rule or regulation under Section 666 of the Charter or any other law shall be adopted unless such proposed rule or regulation shall have been published in the Bulletin of the Board for at least ten days prior to a public hearing thereon. Three (3) affirmative votes of the Board shall be necessary for the adoption of such resolution. No such rule shall become effective until twenty (20) days after publication in the Bulletin.

ARTICLE X—ADOPTION OF OTHER RESOLUTIONS

1. Every resolution of the Board of Standards and Appeals suggesting changes or amendments to the law and every resolution not otherwise provided for, shall require at least three (3) affirmative votes for its adoption.

RULES OF PROCEDURE

ARTICLE XI—INSPECTIONS

1. In any case in which the Board may deem it necessary, inspection of the premises in question may be ordered by the Board. Inspection in connection with zoning applications and administrative appeals shall be made by a Committee of not less than two (2) Commissioners and they shall report their findings to the Board at any executive session, prior to the public hearing at which the vote will be cast. The committee may include the Director and/or a staff engineer as designated by the Board. Any Commissioner of the Board shall be included in the Committee, upon his request.

ARTICLE XII—TESTS

1. The five (5) Commissioners of the Board shall constitute the Supervisory Committee on materials, appliances and methods of construction. In any case in which a test is required, the Director shall order such test of any material, appliance or method of construction. Such tests shall be conducted according to the rules adopted by the Board, or directives of the Supervisory Committee, and in accordance with the requirements of law for the use of such material, appliance or method of construction. Tests shall be conducted in the presence of such member of the engineering staff as the Director may designate. In lieu of the above, tests made of the material, appliance or method of construction, by a recognized standard testing laboratory, City or State department, may be acceptable, but the Board reserves the right to be represented at tests by a member of the Engineering Staff or Board or any other person designated by the Supervisory Committee. The complete report of such tests shall be made to the Board in writing.

2. All expenses, including laboratory and traveling expenses, of such tests shall be borne by the applicant and no cost of such tests shall be borne by the Board.

3. Three (3) affirmative votes of the Board shall be necessary for the approval of such material, appliance or method of construction.

ARTICLE XIII—RECORDS

1. All applications and appeals shall be on the required forms, and all communications, reports, etc., relating thereto shall be on sheets approximately 8½ inches by 11 inches in size. Plans shall be on sheets 8½ inches by 11 inches or double thereof unless otherwise accepted by the Director. After final disposition, all applications and appeals and other papers appertaining thereto shall be suitably bound and indexed and filed numerically in cabinets. All applications and appeals, shall upon application to the clerk in charge, be accessible to the public at all reasonable hours.

2. All drawings shall be properly titled, numbered, dimensioned, dated, and otherwise shall conform with the instruction sheet. No drawings shall be accepted unless they bear the seal of a registered architect or licensed professional engineer.

ARTICLE XIV—THE BULLETIN

1. The Bulletin of the Board of Standards and Appeals shall be published each week except during recess. It shall contain:

- (1) Directory of the Board.
- (2) Docket of cases filed since the last publication of the Bulletin.
- (3) The Hearing Calendar.
- (4) Notice of Hearing on proposed rules or the amendment of rules.
- (5) An abstract of the minutes of each meeting, including a brief statement of the action in each case, with the roll call thereon and the full text of the resolutions adopted.
- (6) Index of rules adopted.
- (7) Such other information as may be of value to the public and within the scope of the work of the Board.

2. The preparation and editing of material for the Bulletin shall be in charge of such members of the staff as shall be designated by the Director.

3. The Bulletin of the Board of Standards and Appeals is the official publication of the Board in accordance with Section 665 of the New York City Charter. Notice of hearings published in such Bulletin constitutes required legal notice.

ARTICLE XV—OFFICERS

1. The Chairman, or in his absence, the Vice-Chairman shall preside at all sessions. The Chairman, or in his absence, the Vice Chairman, may designate another Commissioner of the Board to preside and perform the duties of the Chair at public sessions or hearings. If the Chairman and Vice Chairman are absent and a quorum is present, they shall choose a presiding officer from among their number.

2. The Chairman, subject to these rules, shall decide all points of order or procedure, at public hearings, unless otherwise directed by a majority of the Board in session at that time.

3. The Chairman shall, subject to these rules, designate the Commissioners of the Board to make inspections and, unless otherwise directed by the vote of three (3) Commissioners of the Board, shall appoint any committee that may be deemed necessary, except as otherwise provided in Article XI.

4. The Chairman, any Commissioner and the Director shall report at executive sessions all pertinent official transactions that do not otherwise come to the attention of the Board.

5. Administrative authority is vested in the Director, who shall, subject to these rules, transact all administrative business of the Board, engage the necessary employees and direct the work of the office. Official correspondence relating to administrative matters shall be signed by the Director. All official correspondence relating to any matters pending before the Board on the Hearing Calendar shall be signed by the Chairman or a member of the Board or staff designated by him. Incoming official correspondence may be sent to the Chairman, the Commissioners and/or the Director.

6. Subject to these rules and the supervision of the Director, the Chief Clerk shall have charge of all accounts and shall see that the files and indices are kept in proper order and up to date and generally supervise the clerical work of the office force.

7. Subject to these rules and the supervision of the Director, the Engineering Staff shall examine and report on all applications and appeals, prepare proposed rules or revised rules assigned to them by the Director, and shall report on the desirability, reasons and necessity for action. They shall supervise and witness the tests conducted under the auspices of the Board.

8. A complete stenographic record of the transactions at public sessions shall be made for the files, and there shall be prepared after each meeting for publication in the Bulletin the abstract of the minutes which are to appear in such Bulletin. Verbatim transcripts of the record or any part thereof may be made as directed by the Chairman or the Director.

ARTICLE XVI—RULES OF PROCEDURE

1. Amendments to these Rules of Procedure may be made by the Board of Standards and Appeals at any public hearing, provided notice of such amendment has been given to each Commissioner of the Board at least three (3) days prior to such session, either in writing or by publication in the Bulletin. Any Rule of Procedure may be suspended at any session by the concurring vote of three (3) Commissioners.

RULES

Fire Drill Rules, Adopted by the Board of Standards and Appeals, October 5, 1923

(593-23-SR)

DEFINITION OF "FIRE DRILL"

The method and practice of the systematic and orderly vacating of a building by its occupants in case of emergency, panic or fire in the least possible time—by the nearest safe means of exit—and the use of fire appliances which shall be provided for the extinguishing or retarding of fire and the safeguarding of human life.

Rule 1.

In all buildings as defined in Article 1, Section 10 of the Labor Law in which fire drills are required pursuant to Section 279 thereof and in any other building in which such drills are required by the Fire Commissioner pursuant to the power conferred in section 491 of the New York City Charter, it shall be the duty of the owners, lessees or tenants to conduct fire drills monthly and at such other times as the Fire Commissioner may direct.

For the purpose of conducting such fire drills the owner or tenants shall appoint from among their employees such responsible and dependable persons, male or female, who shall efficiently perform the duties of the various positions of the fire drill organization, as specified on the accompanying chart.

It shall be the duty of the owner or tenant to enter in the blank spaces provided for that purpose in said chart the names of persons so selected and post said chart and copies of the rules in a conspicuous place.

Rule 2. Duties of Foreman.

The Foreman or Person in Charge shall direct, enforce and have full charge of the "Fire Drill" in every factory on each floor. Each day before work is begun he shall see that extinguishers, fire hose, fire buckets, etc., are in readiness for use, exit doors are unlocked, aisles are free from obstruction, that stairways, halls, etc., are properly lighted, and shall remedy any dangerous condition found to exist. Immediately after work is commenced he shall check up the Fire Drill Organization list and note if the regularly assigned persons are present; if any are found to be absent, he shall assign other employees (if practicable) to perform their duties.

He shall immediately notify new employees of the existence of the Fire Drill Organization and give them the necessary instructions as to the duties they are to perform, etc.

He shall be familiar with the operation and location of the interior alarm signal box on his floor.

He shall listen for the test signal each morning at the appointed hour and in the event of the test signal not being heard he shall communicate with the superintendent or other person in charge of the building and advise him of the fact. The (Floor Captain's) Foreman's orders are final as to the carrying out of the fire drill on his particular floor.

Rule 3. Duties of Watchmen.

The WATCHMEN shall see that all doors and windows are closed so as to prevent the spread of fire. The WATCHMEN shall be the only persons permitted to remain on the floor during the progress of a fire drill and do so at their own risk. For ordinary purposes only one watchman and a substitute shall be designated. In special cases, however, extra watchmen may be assigned by consent in writing from Fire Commissioner.

Rule 4. Duties of Searchers.

The MALE AND FEMALE SEARCHERS shall search all toilets, dressing rooms and emergency rooms used and frequented by their sex and all other portions of the floor and order all persons, except those authorized to remain, to leave the premises. They are to take care of and assist all persons who may faint or be disabled.

SEARCHERS shall leave the floor immediately after the last squad leaves.

Rule 5. Duties of Street Alarm Box Runner.

The STREET-ALARM-BOX-RUNNER shall be familiar with the location of the nearest city fire alarm box and know how it is operated.

In ordinary practice fire drills the STREET-ALARM-BOX-RUNNER shall report to the Foreman for orders, and if his services are not required he shall promptly file out of the premises with the other occupants.

Only when a fire actually occurs on his floor, or when ordered to do so by the Foreman, shall the STREET-ALARM-BOX-RUNNER proceed to the street alarm box and send in the fire alarm.

RULES

Rule 6. Duties of Fire Brigade.

The fire brigade shall have full charge of the operation of all auxiliary fire fighting apparatus and shall endeavor to extinguish, or at least hold in check until the arrival of the Fire Department, any fire that may occur. When it is necessary for the fire brigade to respond to different floors in the building they shall not use the stairways or fire escapes while the occupants are escaping from the premises.

Rule 7. Duties of Exit Guards.

The EXIT GUARDS shall station themselves at all exit doors leading to fire escapes, stairways, and other means of escape immediately upon the sounding of the alarm. There shall be two guards for each exit, if practicable; one to stand in the hallway holding back the door and the other directly inside on the floor. They are to keep the exit doors open and direct the movements of the persons using these exits and prevent congestion.

EXIT GUARDS shall remain at their stations until all of the occupants of the building have passed their station. Then close their doors and pass out of the building. Upon signal for the occupants to return, EXIT GUARDS shall take their designated stations and remain there until all persons have returned to their respective floors.

Rule 8. Duties of Squad Monitors.

The SQUAD MONITORS, as soon as the alarm is sounded, shall see that the employees under their charge quickly form into line, two abreast, and numbering not more than thirty to each squad. They shall see that all aisles and passageways are cleared of obstructions.

Note: Chairs, stools, baskets, etc., should be pushed under or placed on top of work benches.

MONITORS shall proceed at the head of their respective squads to the exit assigned, and then march up or down the stairs or to other exits as directed by the EXIT GUARDS.

On reaching the sidewalk MONITORS shall keep their squads in order and lead them a reasonable distance from the building, so as not to cause congestion and interference with fire apparatus. When the proper signal is given they shall return to their respective floors at head of their squads.

MONITORS will at all times see that those under their charge conduct themselves in a respectable and orderly manner.

Rule 9. Holding of Drills.

FIRE DRILLS shall be held at least once each month at varied hours of the day, and all of the occupants shall participate therein simultaneously. Such drills shall conduct all occupants to a place of safety.

Where dual operation interior fire alarm systems are installed as permitted under Rule 11 of the interior fire alarm rules of the Board of Standards and Appeals, the fire drill conducted each month shall include all of the

persons on the premises engaged at work for a factory, and drills shall be conducted at least twice, each year in which all of the persons on the premises shall participate simultaneously.

Rule 10. Duties of Owner.

It shall be the duty of the OWNER, LESSEE OR TENANT OF THE BUILDING or his authorized agent or their representatives to personally observe that the "Fire Drill" is held simultaneously on every floor of the building and the participation therein of every occupant of such building. Any FIRE DRILL in which all of the occupants do not participate shall not be considered as complying with the LAW, except as otherwise provided in these rules.

The person or persons representing the OWNERS, LESSEE OR TENANT, who supervises the FIRE DRILL at the building shall submit to an examination by the Division of Fire Prevention as to their experience and general fitness for such duties, and shall be so certified in writing by the FIRE COMMISSIONER.

It shall be the duty of the ENGINEER, SUPERINTENDENT or other PERSON IN CHARGE of a building having an interior fire alarm system to test such system daily immediately after the beginning of business, and to see that all apparatus operated by springs, requiring winding are rewound after each alarm and kept in normal condition for operation.

Rule 11. Duties of Engineer.

Whenever it is necessary to test the fire alarm system at any other time of the day, owing to repairs, etc., being made, the PERSON IN CHARGE OF BUILDING will first notify all Foremen of the several floors of the intended test and likewise notify them when the repairs, etc. are completed. This precaution is taken to prevent confusion and excitement, also misunderstanding of the alarm signals.

It shall also be the duty of the PERSON IN CHARGE OF BUILDING to sound the interior alarm system at irregular intervals, but not less than once each calendar month, for the purpose of holding practice fire drills. He shall keep on the premises a record of such drills, showing the date when held and the required time for all occupants to reach the street or a point of safety outside the building.

The PERSON IN CHARGE OF BUILDING must immediately acquaint new tenants of the existence of the "Fire Drill" Organization and its purport.

Rule 12. Registration.

The name and address of every person, corporation or co-partnership, that will, under professional service, carry on the trade, business or calling of establishing, maintaining or supervising the "Fire Drill" shall be registered in the Fire Department, which Department shall, upon evidence of fitness, grant a certificate to that effect.

RULES

RULES RELATING TO SMOKING IN PROTECTED PORTIONS OF FACTORIES, AND IN SPECIAL CLASSES OF OCCUPANCIES.

Adopted by the Board of Standards and Appeals August 13, 1918, effective September 9, 1918, under the powers conferred upon the Board by Section 718-a, Subsections 2 and 3 (Old Charter) to supplement Section 283 of the Labor Law (Old Section 83c).

[Cal. 1262-18-SR]

Labor Law

Section 283. Smoking.

1. No person shall smoke in a factory. A notice of such prohibition stating the penalty for violation thereof shall be kept posted in every entrance hall, elevator, stair hall and room of a factory in English, and in such other languages as the fire commissioner of the city of New York in such city and elsewhere the commissioner shall direct.

2. The board in its rules may permit smoking in protected portions of a factory, or in such classes of occupancies where in its opinion the safety of the employees will not be endangered thereby. The fire commissioner of the city of New York in such city and elsewhere the commissioner may issue such permits in accordance with rules adopted by the board.

3. The fire commissioner of the city of New York in such city and elsewhere the commissioner shall enforce this section.

RULE 1. Permit.

(a) **Prohibition.** No person shall smoke, or carry a lighted cigar or cigarette in any factory as defined in Article 1, Section 2, of the State Labor Law, nor in any portion of a factory, within the City of New York, except in such protected portions or special classes of occupancies as are specified in Rule 2 of these rules, and then only after the issuance of a permit by the administrative official.

It shall be the joint and several duty of the owner and of the lessee or lessees of the building containing such factory or factories to cause to be posted in each and every entrance hall, stair hall or room throughout the building, as well as in every elevator car, in English, and also in such other language or languages—as the administrative official shall direct, a notice of such prohibition, and the penalty for its violation.

(b) **Application.** Application for such permit shall be made only by the owner of the building on suitable blank forms to be furnished by the administrative official.

(c) **Time Limit.** Such permit shall be for a definite period, not exceeding one year, and shall not be renewed upon the expiration until a reinspection of the premises for which it is issued has been made for the purpose of determining whether existing conditions warrant a renewal.

(d) **Conditions.** The permit shall state the conditions under which the hours between which, and the place or places in such factory where smoking may be permitted, and this

permit shall be framed and kept posted in a conspicuous place in the factory.

(e) **Revocation.** Violation of any of the conditions specified in the permit in addition to incurring such penalties as are prescribed by law, shall be full and sufficient cause for the revocation of such permit by the administrative official, and shall not again issue a permit for the same premises until at least one year has elapsed.

Rule 2. Permissible Cases.

Smoking may be permitted in:

(a) Factories engaged in the manufacture of cigars, cigarettes, or smoking tobacco, when necessary for the efficient conduct of the business, provided that:

(1) No smoking other than that for sampling, testing and experimental purposes is carried on.

(2) Such smoking is conducted in a room provided especially for that purpose, separated from the rest of the building by fireproof or fireresisting partitions, with all openings therein protected by selfclosing fire doors, and further, unless the building is of fireproof construction or provided with an approved automatic sprinkler system, the floor and ceiling of such room shall be covered with fire retarding material.

(3) Such chemical fire extinguishers as the administrative official may direct are installed.

(4) All waste paper and other inflammable waste materials are deposited in fireproof receptacles.

(b) Factories devoted entirely to one of the following occupancies:

Blacksmithing or horseshoeing;
Boiler making;
Brick, terra cotta or artificial stone works;
Forge shops;
Foundries;
Iron, steel, brass or copper works;
Machine shops;
Smelting;
Stone or monumental works;

provided that in any case:

(1) The building is not of wooden construction;

(2) Such chemical fire extinguishers as the administrative official may direct are installed;

(3) All waste paper and other inflammable waste materials are deposited in fireproof receptacles.

Rules Pertaining to Fire Drills.

COURT DECISION

Matter of North American Holding Corporation vs. Board:—On January 31, 1956, the Board denied an application under Section 21 of the Zoning Resolution to permit in a residence and business use district a proposed change of use to stores in cellar, which is in the residence use district; Cal. No. 225-36-BZ—Vol. III; premises 1180-1188 Grand Concourse, 180-188 East 167th Street, southeast corner, Borough of The Bronx.

At Special Term, Supreme Court, Bronx County, Mr. Justice Flynn directed that the determination of the Board be set aside and the matter submitted to the Board for rehearing. (N. Y. Law Journal of July 16, 1957, p. 4.)

In view of the interpretation of the law as enunciated by the court, notice of appeal to the Appellate Division has been filed.

Upon further appeal to the Appellate Division of the First Department, (Proceeding No. 899), the appeal unanimously dismissed, as a matter of law, with \$20 costs and disbursements to petitioner-respondent. Opinion by Breitel, J. Order filed. (N. Y. Law Journal, December 10, 1958, page 11.)

Mr. Justice Breitel, speaking for the court, called attention to the order remitted by the court at Special Term for a rehearing in accordance with the views expressed and he discussed at length as to whether the order entered at Special Term is intermediate or final in character, stating in part:

"The judicial process here is not the petition it is the order; or, in the traditional practice in certiorari, the writ. To the extent that the Administrative Code is not specific in its procedural directions, the procedure set up by Article 78 of the Civil Practice Act controls, since it is there provided that, whenever 'in any statute reference is made to a writ or order of certiorari . . . such reference shall, so far as applicable, be deemed to refer to the proceeding authorized by the article' (Civil Practice Act, sec. 1283)" (p. 69). "Since Article 78 is applicable, the appeal must be dismissed if the order appealed from is intermediate rather than final. This would follow because of the failure by appellant Board to first obtain leave to appeal, as required by Section 1304 of the Civil Practice Act." "Accordingly, the appeal should be dismissed as a matter of law. . . . All concur." (N. Y. Law Journal, December 10, 1958.)

In the Law Journal of December 19, 1958, page 1, the Appellate Division, First Department, discussed final and intermediate appeals from order remanding proceedings to the Board, stating as follows:

"A proceeding to review a determination of the Board of Standards and Appeals is not controlled exclusively by the provisions relating to such proceedings in the City Charter and the Administrative Code of the City of New York. The provisions in Article 78 of the Civil Practice Act apply, including the provision in section 1134 that, unless the court directs otherwise, an appeal from an intermediate order may be taken only in connection with an appeal from the final order. Whether an order reviewing a determination of an administrative agency, which annuls that determination and remits the matter to the agency for further action, is final or intermediate depends on whether the further action required is merely ministerial or involves the exercise of quasi-judicial responsibility. Since the Board of Standards and Appeals, under an order remanding a proceeding to it for a 'rehearing in accordance with the views set forth in the opinion' of the court, will be required to exercise judgment and discretion with respect to the matters presented at the rehearing, the order is intermediate, and, leave not having been obtained, an appeal from the order must be dismissed."

The Court of Appeals (Proceeding No. 154) affirmed without opinion the lower courts' decision, reversing the Board and requiring a rehearing of this case. (N. Y. Law Journal, July 10, 1959, page 3.)

* Correction—In the next to the last line of the resolution, the word "local" deleted, so that portion of the resolution shall read: "within a retail district."

PUBLIC HEARING

Cal. No. 353-30-SR

NOTICE IS HEREBY GIVEN that a public hearing November 20, 1959 at 10 A.M. in Room 909, at 80 Lafayette Street, Manhattan, on the following proposed amendments to the Rules governing the use of equipment for Spraying and Drying of Paints, Varnishes, Lacquers and other inflammable surface Coatings and Storage of such Materials. New Matter in Italics, Matter to be deleted in Brackets.

4. Specification for Spray Booths, Spray Rooms, Dip and Immersing Rooms, Drying Equipment and Material Storage Rooms.

4.1.1 Spray, dip and immersing rooms shall be enclosed on all sides with partitions constructed of incombustible materials with floors in such rooms of concrete where such rooms are located over wooden floors, such wood floors shall be surfaced with 1" of grout adequately reinforced or a mixture of Portland cement, asphalt and sand similarly reinforced. Ceilings over such rooms shall be protected by $\frac{5}{8}$ " unsanded gypsum plaster or $\frac{7}{8}$ " of cement or sanded gypsum plaster on approved 3.0 lb. metal lath or other equivalent fire resisting ceiling protection. Ventilation, lighting and heating for these rooms shall comply with the requirements of these rules. Where additional fire fighting equipment is necessary such equipment shall be furnished in accordance with the direction of the Fire Commissioner. Floor drains leading to the house draining system or the public sewer shall not be permitted. [All] Dip tanks shall be provided with hinged metal covers held open by a fusible link, such covers to be equipped with an opening to permit automatic flooding of the tank with fire extinguishing media of a type and so located as the Fire Commissioner shall direct. *Where the work process, such as conveyorized operation, makes the use of a cover impractical, the dip tank and drain boards shall be protected by an adequate extinguishing system designed for manual and automatic operation and satisfactory to the Fire Commissioner.*

4.3 Drying Equipment.

4.3.1 Gas Fired Drying Ovens. Gas fired drying ovens shall be of a type as approved by the Board. Such ovens shall be constructed of metal and incombustible materials so designed as to preclude the direct application of flame to the materials in process. [The exhausts from both the heating compartments and the drying compartment shall be individually equipped with adequate fans and exhaust piping connected directly to the outer air]. *Ventilation shall be provided for each oven of sufficient capacity to maintain an oven vapor concentration at all times during the drying process of less than $\frac{1}{4}$ the low explosive limit of the solvent used. All oven openings shall be maintained at a negative pressure to maintain inward flow. The controls for the safety exhaust and recirculating fans shall be [so] properly interlocked with the gas supply line so that when the gas is flowing the fans are in operation. A time delay relay shall be installed to provide a minimum of four oven volume changes with fresh air and in the case of an indirect fired type of oven simultaneous purging of the combustion chamber before the ignition system may be operated.*

[An extra switch shall be provided to permit the operation of the fans when the gas supply is off]. Each oven shall be equipped with approved gas burning equipment with electrical controls so arranged as to shut off the gas valve when ignition fails or the gas supply pressure drops to 2 inches of water.

The use of a continuous gas pilot light is prohibited unless an automatic gas shut off valve is provided which will shut the gas off at the pilot light when the flame is extinguished or the supply of gas cut off. Electrical pilot ignition shall be of the continuous type or equal in performance, designed for use in high temperatures, with controls so interlocked as to shut off the gas supply when current is interrupted. An auxiliary manually operated gas shut off valve shall be located not nearer than 25 feet from the oven so as to control the gas supply in the event of an emergency. Such ovens shall be adequately insulated on all sides, including the base, which will have the equivalent of a double thickness of such insulation unless the floor is protected by a 3 inch mat of reinforced concrete placed over and bonded into the existing concrete floor and projecting not less than 6 inches outside the projected area of the equipment or unless an unenclosed clear air space not less than 4 inches above the floor is maintained between the floor and the underside of the oven.

4.3.1.1 *The burner section of gas fired drying ovens shall not be located nearer than 25 feet from spraying or dipping spaces. [Unless such oven is approved for use in explosive atmospheres].*

4.3.2 Electric Infra-red Ray Drying Ovens.

4.3.2.1 In drying processed material the evaporation of considerable amounts of flammable solvents by infra-red lamps, such installations shall not be confined in small rooms unless such rooms are thoroughly ventilated by a power driven ventilation system of sufficient capacity to provide 100 linear feet of air per minute *over the entire surface of the processed material*; the controls of the ventilation system to be so interlocked with the Infra-Red Ray System that the latter cannot function unless the ventilating system is in operation. When equipped with duct ventilating system, the Infra-Red Ray Oven shall be adequately secured so as to prevent moving.

4.3.2.1.4 *Lamp and resistance heater type drying units shall be separated from spraying and dipping processes complying with these rules by a distance of at least 15 feet or shall be installed in a separate fireproof room.*

4.3.2.1.6 Where there are no conveyors and the material being processed is left stationary in the dryer there shall be an excessive temperature switch to shut off the lamps *or resistance heaters* to avoid overheating the material being processed if it is not removed from the dryer in time.

4.3.3 [The use of these processes shall be limited to metal or other incombustible material requiring paint processing]. *The temperature of the air contacting the processed material shall not be higher than that to which such material can be safely subjected, but not over 350°.*

RULES

Fire Drill Rules, Adopted by the Board of Standards and Appeals, October 5, 1923

(593-23-SR)

DEFINITION OF "FIRE DRILL"

The method and practice of the systematic and orderly vacating of a building by its occupants in case of emergency, panic or fire in the least possible time—by the nearest safe means of exit—and the use of fire appliances which shall be provided for the extinguishing or retarding of fire and the safeguarding of human life.

Rule 1.

In all buildings as defined in Article 1, Section 10 of the Labor Law in which fire drills are required pursuant to Section 279 thereof and in any other building in which such drills are required by the Fire Commissioner pursuant to the power conferred in section 491 of the New York City Charter, it shall be the duty of the owners, lessees or tenants to conduct fire drills monthly and at such other times as the Fire Commissioner may direct.

For the purpose of conducting such fire drills the owner or tenants shall appoint from among their employees such responsible and dependable persons, male or female, who shall efficiently perform the duties of the various positions of the fire drill organization, as specified on the accompanying chart.

It shall be the duty of the owner or tenant to enter in the blank spaces provided for that purpose in said chart the names of persons so selected and post said chart and copies of the rules in a conspicuous place.

Rule 2. Duties of Foreman.

The Foreman or Person in Charge shall direct, enforce and have full charge of the "Fire Drill" in every factory on each floor. Each day before work is begun he shall see that extinguishers, fire hose, fire buckets, etc., are in readiness for use, exit doors are unlocked, aisles are free from obstruction, that stairways, halls, etc., are properly lighted, and shall remedy any dangerous condition found to exist. Immediately after work is commenced he shall check up the Fire Drill Organization list and note if the regularly assigned persons are present; if any are found to be absent, he shall assign other employees (if practicable) to perform their duties.

He shall immediately notify new employees of the existence of the Fire Drill Organization and give them the necessary instructions as to the duties they are to perform, etc.

He shall be familiar with the operation and location of the interior alarm signal box on his floor.

He shall listen for the test signal each morning at the appointed hour and in the event of the test signal not being heard he shall communicate with the superintendent or other person in charge of the building and advise him of the fact. The (Floor Captain's) Foreman's orders are final as to the carrying out of the fire drill on his particular floor.

Rule 3. Duties of Watchmen.

The WATCHMEN shall see that all doors and windows are closed so as to prevent the spread of fire. The WATCHMEN shall be the only persons permitted to remain on the floor during the progress of a fire drill and do so at their own risk. For ordinary purposes only one watchman and a substitute shall be designated. In special cases, however, extra watchmen may be assigned by consent in writing from Fire Commissioner.

Rule 4. Duties of Searchers.

The MALE AND FEMALE SEARCHERS shall search all toilets, dressing rooms and emergency rooms used and frequented by their sex and all other portions of the floor and order all persons, except those authorized to remain, to leave the premises. They are to take care of and assist all persons who may faint or be disabled.

SEARCHERS shall leave the floor immediately after the last squad leaves.

Rule 5. Duties of Street Alarm Box Runner.

The STREET-ALARM-BOX-RUNNER shall be familiar with the location of the nearest city fire alarm box and know how it is operated.

In ordinary practice fire drills the STREET-ALARM-BOX-RUNNER shall report to the Foreman for orders, and if his services are not required he shall promptly file out of the premises with the other occupants.

Only when a fire actually occurs on his floor, or when ordered to do so by the Foreman, shall the STREET-ALARM-BOX-RUNNER proceed to the street alarm box and send in the fire alarm.

Rule 6. Duties of Fire Brigade.

The fire brigade shall have full charge of the operation of all auxiliary fire fighting apparatus and shall endeavor to extinguish, or at least hold in check until the arrival of the Fire Department, any fire that may occur. When it is necessary for the fire brigade to respond to different floors in the building they shall not use the stairways or fire escapes while the occupants are escaping from the premises.

Rule 7. Duties of Exit Guards.

The EXIT GUARDS shall station themselves at all exit doors leading to fire escapes, stairways, and other means

of escape immediately upon the sounding of the alarm. There shall be two guards for each exit, if practicable; one to stand in the hallway holding back the door and the other directly inside on the floor. They are to keep the exit doors open and direct the movements of the persons using these exits and prevent congestion.

EXIT GUARDS shall remain at their stations until all of the occupants of the building have passed their station. Then close their doors and pass out of the building. Upon signal for the occupants to return, EXIT GUARDS shall take their designated stations and remain there until all persons have returned to their respective floors.

Rule 8. Duties of Squad Monitors.

The SQUAD MONITORS, as soon as the alarm is sounded, shall see that the employees under their charge quickly form into line, two abreast, and numbering not more than thirty to each squad. They shall see that all aisles and passageways are cleared of obstructions.

Note: Chairs, stools, baskets, etc., should be pushed under or placed on top of work benches.

MONITORS shall proceed at the head of their respective squads to the exit assigned, and then march up or down the stairs or to other exits as directed by the EXIT GUARDS.

On reaching the sidewalk MONITORS shall keep their squads in order and lead them a reasonable distance from the building, so as not to cause congestion and interference with fire apparatus. When the proper signal is given they shall return to their respective floors at head of their squads.

MONITORS will at all times see that those under their charge conduct themselves in a respectable and orderly manner.

Rule 9. Holding of Drills.

FIRE DRILLS shall be held at least once each month at varied hours of the day, and all of the occupants shall participate therein simultaneously. Such drills shall conduct all occupants to a place of safety.

Where dual operation interior fire alarm systems are installed as permitted under Rule 11 of the interior fire alarm rules of the Board of Standards and Appeals, the fire drill conducted each month shall include all of the persons on the premises engaged at work for a factory, and drills shall be conducted at least twice, each year in which all of the persons on the premises shall participate simultaneously.

Rule 10. Duties of Owner.

It shall be the duty of the OWNER, LESSEE OR

TENANT OF THE BUILDING or his authorized agent or their representatives to personally observe that the "Fire Drill" is held simultaneously on every floor of the building and the participation therein of every occupant of such building. Any FIRE DRILL in which all of the occupants do not participate shall not be considered as complying with the LAW, except as otherwise provided in these rules.

The person or persons representing the OWNERS, LESSEE OR TENANT, who supervises the FIRE DRILL at the building shall submit to an examination by the Division of Fire Prevention as to their experience and general fitness for such duties, and shall be so certified in writing by the FIRE COMMISSIONER.

It shall be the duty of the ENGINEER, SUPERINTENDENT or other PERSON IN CHARGE of a building having an interior fire alarm system to test such system daily immediately after the beginning of business, and to see that all apparatus operated by springs, requiring winding are rewound after each alarm and kept in normal condition for operation.

Rule 11. Duties of Engineer.

Whenever it is necessary to test the fire alarm system at any other time of the day, owing to repairs, etc., being made, the PERSON IN CHARGE OF BUILDING will first notify all Foremen of the several floors of the intended test and likewise notify them when the repairs, etc. are completed. This precaution is taken to prevent confusion and excitement, also misunderstanding of the alarm signals.

It shall also be the duty of the PERSON IN CHARGE OF BUILDING to sound the interior alarm system at irregular intervals, but not less than once each calendar month, for the purpose of holding practice fire drills. He shall keep on the premises a record of such drills, showing the date when held and the required time for all occupants to reach the street or a point of safety outside the building.

The PERSON IN CHARGE OF BUILDING must immediately acquaint new tenants of the existence of the "Fire Drill" Organization and its purport.

Rule 12. Registration.

The name and address of every person, corporation or co-partnership, that will, under professional service, carry on the trade, business or calling of establishing, maintaining or supervising the "Fire Drill" shall be registered in the Fire Department, which Department shall, upon evidence of fitness, grant a certificate to that effect.

NOTICE

In accordance with sound management practice and due to budgetary limitations, two changes have been instituted in the Bulletin of the Board of Standards and Appeals. These changes, in compliance with the requirements of Chapter 27, Section 665 of the Charter of the City of New York and the rules of the Board, are as follows:

1—CALENDAR: Notices of public hearing on applications for zoning variances will be published twice: first publication, listing new cases set for hearing, in the Bulletin available to the public at least 14 days before the date of hearing; second publication, in the last Bulletin available to the public immediately prior to the hearing date. The second publication will be augmented with a listing of cases laid over from previous hearings. Attention is directed to the MINUTES of such previous hearings, where the reasons for laid over cases will have been published. Notices of public hearing on applications for approval of materials and appliances will be published once, at least 10 days prior to the hearing date.

2—MINUTES: The publication of the "digest" of the applicant's statement has been discontinued, except that the administrative orders, decisions, etc., which are the subject of each application or appeal will be published. The summary of information given in the Appeal Form (Form A) shall be published for Administrative Appeals. The Board will continue to publish such other matters as it may deem advisable.

Correction Affecting Calendar Numbers 244-59-BZ, 337-59-BZ, 338-59-BZ.

WHEREAS, the report of a Committee on Test reads:

Re: Calendar Number 178-33-SA-Vols. I & II.

Subject: To reopen and amend resolution to include new model fire alarm station.

Acme Fire Alarm Co., Inc., New York, N. Y., requested by letter dated August 25, 1959 that the resolution adopted October 17, 1933 under Calendar Number 178-33-SA, Vol. I and amended October 18, 1955 as Vol. II, be amended to include the new Decorline Coded Fire Alarm Stations.

Description

The mechanical and electrical features of the new Decorline Coded Fire Alarm Stations are identical to those in the stations previously approved under Calendar Number 178-33-SA, Vols. I & II. The change was made in the door to give the station a more streamlined appearance. The door, which is held closed by a friction catch, is hinged at the bottom and opens downward. A fire alarm signal code card is placed on the inside of the door.

Recommendation

The Committee on Test recommends that the resolution

adopted October 17, 1933 under Calendar Number 178-33-SA, Vol. I and amended October 18, 1955 as Vol. II be amended so as to include the Decorline Coded Fire Alarm Stations for installation in premises, in accordance with the Rules of the Board for fire alarm signal systems and on condition that the requirements of the resolution adopted October 17, 1933 under Calendar Number 178-33-SA be complied with.

THE RESOLUTION—

WHEREAS, the report of a Committee on Test reads:

Re: Calendar Number 80-50-SA.

Subject: Amendment to resolution as to additional models.

General Electric Company, 570 Lexington Avenue, New York, N. Y., requested by letter dated March 25, 1959 that the resolution adopted January 16, 1951 under Calendar Number 80-50-SA be amended so as to include new model ammonia dissociators identified by catalogue numbers 221L520, 221L521, 221L522, 221L523, and 221L525. The resolution was reopened by a vote of the Board, April 28, 1959.

Description

The new model ammonia dissociators are similar to those previously approved under Calendar Number 80-50-SA except that the design of the dissociating element has been changed from a coiled tube design to a tube type retort as shown on drawing 668C491 submitted by the applicant and the two larger units have increased capacity.

The capacities of the new models are:

Number	Capacity
221 L 520	500 CFH
221 L 521	1000 CFH
221 L 522	2000 CFH
221 L 523	4000 CFH
221 L 525	8000 CFH

Recommendation

The Committee on Test recommends that the resolution adopted January 16, 1951 under Calendar Number 80-50-SA be amended so as to include the additional General Electric Ammonia Dissociators, Models 221L520, 221L521, 221L522, 221L523 and 221L525, on condition that the requirements of the resolution adopted January 16, 1951 under Calendar Number 80-50-SA be complied with.

Subject: Reopen and amend resolution as to include a new Spee-Flo Pressurematic, Model 600-A-HA Heater equipped with the manganese bronze cover plates (Paint Preheater).

The Spee-Flo Company, Houston, Texas, requested by letter August 29, 1958 that the resolution adopted October 5, 1954 under Calendar Number 92-54-SA be reopened and amended so as to include the additional appliance. Spee-Flo Pressurematic, Model 600-A-HA Heater equipped with the manganese bronze cover plates (Paint Preheater). The application was reopened by a vote of the Board, October 15, 1958.

Purpose

The appliance is intended to preheat paint being fed to paint spray guns.

Description

The Spee-Flo Pressurematic, Model 600-A-HA Heater equipped with the manganese bronze cover plates (Paint Preheater) is the identical equipment as Model 600-A previously approved by the Board under Calendar Number 92-54-SA, October 5, 1954, except that it is designed to operate at higher fluid pressures.

Inspection and Test

The details of construction were examined by Ass't. Engr. J. A. Darts, Committee on Test.

This preheater was tested and approved by the Underwriters' Laboratories under Application #53C4323.

Recommendation

The Committee on Test recommends that the resolution adopted October 5, 1954 under Calendar Number 92-54-SA be reopened and amended so as to include the appliance known as Spee-Flo Pressurematic, Model 600-A-HA Heater equipped with the manganese bronze cover plates, on condition that the requirements of the resolution adopted October 5, 1954 under Calendar Number 92-54-SA be complied with.

Re: Calendar Number 863-54-SA

Subject: Amendment of resolution as to additional models of gasoline dispensers.

The John Wood Company, Bennett Pump Division, Muskegon, Michigan, requested by letters dated December 18, 1956 and October 6, 1958 that the resolution adopted February 5, 1957 under Calendar Number 863-54-SA be amended to include new model gasoline dispensers 1076-D, 1076, 1077D, 1077, 2076 and 2077. The resolution was reopened by a vote of the Board, April 2, 1957.

Description

The Models 1076-D, 1076, 1077-D and 1077 replace the Models 976-D, 976, 977-D and 977 respectively, previously approved under Calendar Number 863-54-SA.

The principle changes only involve appearance. Only one visi-gage is employed on the nozzle side of the pump. The interlock is a new Veeder-Root push button type which automatically returns the computer to zero by pushing a button instead of turning a crank.

The Models 1076-D and 1076 as the 976-D and 976 have a computer, the Models 1077-D and 1077 as the 977-D and 977 have no computer.

The Models 2076 and 2077 are single product twin meter dispensers similar to the Models 976 and 977 previously approved under Calendar Number 863-54-SA except that the exterior casing has been changed and the dispensers are lower in height.

General Gas Light Co., Kalamazoo, Michigan, filed June 17, 1955 an application with the Board of Standards and Appeals for approval of the Humphrey Radiantfire Gas Heater, Model 405 for use in New York City under the provisions of Article 12, Administrative Building Code.

Purpose

Gas fired space heaters for domestic and commercial use.

Description

The Humphrey Radiantfire Gas Heater, Model 405 is a floor type room or space heater made with a steel base and outer cabinet in which is installed an atmospheric burner with port type openings, all of cast iron. Above the burner are installed 5 ceramic radiants and a ceramic backwall with a chrome hearth deflector plate.

Gas shut-off and control is manual and a safety pilot can be installed.

The heat input rating of the unit is 20,000 Btu per hour.

Inspection and Test

All details were examined by Ass't. Engr. G. F. Sklenarik, Committee on Test.

The Model 405 has been tested and approved by the American Gas Association.

Recommendation

On the basis of the examination and the data filed by the applicant, the Committee on Test recommends the approval of the Humphrey Radiantfire Gas Heater, Model 405, for use in New York City under the provisions of Article 12, Administrative Building Code but not in garages or other occupancies where their use is prohibited by law, provided that they be installed with a minimum clearance of 6 inches from back and sides to combustible construction and further provided that each heater shall bear a label, permanently affixed, reading "Approved by the Board of Standards and

Vacuum Gas Burner Co., Olean, New York, filed August 12, 1955 an application with the Board of Standards and Appeals for approval of the Blu-Flame Gas Fired Space Heater, Models VGU-30, VGU-50, VGU-75 and VGU-100 for use in New York City under the provisions of Article 12, Administrative Building Code.

Purpose

Gas-fired space heaters for commercial use.

Description

The Blu-Flame Gas Fired Space Heaters are suspended type heaters consisting of a steel cabinet enclosing a number of "wedge-tube" heat exchangers, electrically welded into a gas tight assembly. A flat drilled port cast iron burner is installed to burn beneath each exchanger tube. All heaters come with gas controls assembled including a safety pilot with automatic valve. Also a motor and blade fan are provided for forced circulation of air past the heat exchangers and through the front louvers. A high limit switch is installed on each heater.

The Blu-Flame heaters are designed for venting combustion products to outdoors and have built-in draft diverters.

The capacity of each model is:

Re: Calendar Number 496-58-SA

Subject: A. O. Smith, Permaglas and Burkay Glass Lined Water Heaters.

C. W. Johnson for A. O. Smith Corporation, Kankakee, Illinois, filed August 22, 1958 an application with the Board of Standards and Appeals for approval of the A. O. Smith, Permaglas and Burkay Glass Lined Water Heaters, Models PG-30, PG-30V, PG-50, PG-65, PGCL-30, B-180, B-50, B-65, B-97, PGCA-30, PGCA-40, PGO-30, PGO-30V, PGO-40, PGO-40V, PGO-50, PGO-65, PGCD-30, PGCD-40 and PGCA-20 for use in New York City under the provisions of Article 12, Administrative Building Code.

Purpose

Gas fired hot water heaters for domestic and commercial use.

Description

These gas fired water heaters are of the self-contained type.

A glass lined steel tank is mounted on a combustion chamber in which is located the gas burner. The tank is filled with water, at main pressure. Heat is transferred to the water through the bottom head of the tank and through the flue passages. These flue passages vary with the models as described below. Into each tank extends the temperature sensitive element of the main gas valve. This is a bi-metal element, expanding on rise of temperature to close gas valve and contracting on drop of temperature to open gas valve. Ignition is by way of a constant flame gas pilot equipped with a 100% safety shut-off. If the pilot goes out all gas is shut off to the heater. Hot water is drawn off at the top of the tank and displaced by cold water which enters the bottom of the tank either by a low inlet or a dip tube. The entire unit is insulated with fiber glass and an outside shell placed over the insulation. The transfer of heat to the water through the flue passages is accomplished by:

1. In Model PGCD, PGCA and PGCL by a center flue. The flue pipe extends from the combustion chamber up through the tank and is in contact with the water.

2. In Model PG, PGO, B-50 and B-65 by means of a "heat wall" external flue. Approximately $\frac{1}{3}$ of the outside shell of the tank is covered with a flue liner and this is the flue passage and heat transfer area.

3. In Model B-180 and B-97 these are so called full floater tanks. The outside wall of the tank is encased by a flue liner which makes the outside wall of the tank a heat transfer area.

All Models are designed for flue connection.

Inspection and Test

All details were examined by Ass't. Engr. G. F. Sklenarik, Committee on Test.

All heaters listed in this application were tested and approved by the American Gas Association.

Recommendation

On the basis of the examination and the data submitted by the applicant, the Committee on Test recommends the approval of the A. O. Smith, Permaglas and Burkay Glass Lined Water Heaters, Models PG-30, PG-30V, PG-50, PG-65, PGCL-30, B-180, B-50, B-65, B-97, PGCA-30, PGCA-40, PGO-30, PGO-30V, PGO-40, PGO-40V, PGO-50, PGO-65, PGCD-30, PGCD-40 and PGCA-20, for use in New York City when installed in accordance with the requirements of Article 12, Administrative Building Code and, where applicable, the Multiple Dwelling Code, provided that each heater shall bear a label, permanently affixed, reading "Approved by the Board of Standards and Appeals for use in New York City under Calendar Number 496-58-SA."

Re: Calendar Number 72-59-SM

Subject: Reopen and amend resolution as to additional method of construction.

Armstrong Cork Company, New York, requested by letter dated August 19, 1959 that the resolution adopted June 2, 1959 under Calendar Number 72-59-SM be reopened so as to include an additional method of construction.

Purpose

The material is to be used as a fire resistive ceiling and floor construction.

Description

The material is mineral wool acoustical tile, $\frac{5}{8}$ inches in thickness, used in conjunction with steel joists, a reinforced concrete slab and a Zee Spline Mechanical Suspension System to afford a two hour fire resistive floor and ceiling construction.

Inspection and Test

The construction was tested at the Underwriters' Laboratory under the provisions of C26-599.0 Administrative Building Code.

The open web joists were spaced 2'-0" on centers and the 3.4 lb./sq.yd. metal lath is placed on top of the joists and wire tied to each joist on approximately 0'-7" on center, concrete is then poured to a depth of 0'-2" over the steel joists, but because of the bow of the lath, the depth of concrete between joists was 0'-3". The Zee runners of 25 gauge galvanized steel spaced 1'-0" on centers are attached to the lower flange of the steel joists by means of No. 11 galvanized

MINUTES

wire, 0'-6 $\frac{1}{4}$ " long clips spaced 4'-0" on centers or every alternate joist. The tile is then installed by inserting the kerfed edge of the tile into the leg of the Zee runner and mutually support each other by means of a tongue and groove interlock.

The system during the fire test was loaded to 148 p.s.f. and the end point of the test was reached at 2 hours 51 minutes at which time the transmitted temperature reached the limiting maximum. The temperature of the steel joists was below 850°F which was well below the limiting maximum 1000°F.

The complete report of the Underwriters' Laboratory 4177-3 is on file with and is part of the record.

Recommendation

On the basis of the test and the data filed by the applicant, the Committee on Test recommends that the resolution adopted June 2, 1959 under Calendar Number 72-59-SM be reopened and amended so as to include the additional form of construction as herein described for use in New York City as a two hour fire resistive floor and ceiling construction, on condition that the requirements of the resolution adopted June 2, 1959 under Calendar Number 72-59-SM be complied with.

Models 822-2005, 822-2006, 823-2540, 823-2550 and
823-2560.

Air Reduction Co., Inc., New York, N. Y., filed March 16, 1959 an application with the Board of Standards and Appeals for approval of the Airco Cutting Torches, Models 822-2005, 822-2006, 823-2540, 823-2550, and 823-2560 for use in New York City under the provisions of Article 17, Chapter 19, Administrative Code.

Purpose

Torches designed for use with propane, natural or manufactured gas with oxygen.

Description

The 822-2005 and 822-2006 Models are hand type cutting torches designed for use with propane, natural or manufactured gas and oxygen mixtures. They are not intended for use with acetylene. They differ from each other only in that the 2005 Model has a head angle of 75° while the 2006 has head angle of 90°.

The torch consists essentially of a head, mixer assembly, gas tubes, front end, rear end and cutting and preheat valve assemblies. The torch materials are mainly of brass or stainless steel except for the head which is silicon bronze. The cutting oxygen valve is of the plunger type with neoprene

seat. An O ring seal is used to prevent leakage of oxygen to atmosphere.

All joints are silver brazed.

The Style 250 cutting tips used with this torch are suitable for low pressure (less than $\frac{1}{4}$ psi), or medium pressure (more than $\frac{1}{4}$ psi) fuel gas pressure. Medium fuel gas pressure should not exceed approximately 2 psi.

The 823-2540, 823-2550 and 823-2560 cutting torches are machine type cutting torches designed for use with propane, natural or manufactured gas but not for acetylene.

Each torch consists essentially of a head, gas tubes, mixer body, rear end, handle and valve assemblies. A gear rack for height adjustment is provided on the handle. All joints are silver brazed.

The torch materials are of brass, except for valve stem ends (stainless steel balls), cutting valve spring (phosphor bronze), preheat valve packing (teflon) and sealing rings (compounded rubber). The cutting valve is of the threaded stem type and the stem is of stainless steel.

The style 250 or 350 cutting tips used with these torches are suitable for low or medium fuel gas pressure as in the case of the 822-2005 and 822-2006 hand torches.

The 823-2540 is provided with two hose connections, the 823-2550 and 823-2560 are provided with an additional cutting hose nipple for three hose operation otherwise the three torches differ from each other in length.

Inspection and Test

All details were examined by Ass't. Engr. G. F. Sklenarik, Committee on Test.

These torches were tested and approved by the Underwriters' Laboratories, Application 58C4892A and 58C5689.

Recommendation

On the basis of the examination and the data filed by the applicant, the Committee on Test recommends the approval of the Airco Cutting Torches, Models 822-2005, 822-2006, 823-2550 and 823-2560 for use in New York City in accordance with this report, the requirements of the Fire Commissioner and Article 17, Chapter 19, Administrative Code, provided that each torch shall bear a label, permanently affixed, reading "Approved by the Board of Standards and Appeals for use in New York City under Calendar Number 157-59-SA".

MINUTES

of Standards and Appeals for approval of the appliance known as Armstrong Gas-fired Heaters, under the provisions of Article 12, Administrative Building Code.

Purpose

The appliance is a gas-fired space heater. Not to be used in garages or places of explosive atmospheres.

Description

The Unvented Bathroom Heater Model 10A and Utility Heater Models 12 and 16 are constructed of 22 gauge steel finished in white porcelain enamel for Models 10A and 12 and white or brown porcelain for Model 16. The burners are drilled port cast iron. The air shutters are made of 20 gauge zinc plated steel. All units have bottom shields or baffles. Louvered openings are provided in the upper portion of the jackets. All heaters are equipped with solid brass valves and are designed for manual ignition. These heaters have an input rating from 10,000 BTU per hour to 16,000 BTU per hour.

The Models 230, 240, 250 and 270 Gas-fired Vented Circulator Type Room Heaters consist of a cast iron slotted port burner, firing into the bottom of a stamped steel combustion chamber. The combustion chamber is connected to a secondary heat exchanger or radiator by means of two flue ways. The flue products then empty into a draft hood which is provided with a collar to attach the flue. The complete heat exchanger is constructed of sheet steel of 20 gauge minimum thickness and finished in a heat resisting black silicone finish.

The heat exchanger is enclosed in a rectangular steel cabinet, the top of which is perforated. The entire front is constructed of expanded steel and is hinged at the top for easy access for cleaning or service. The cabinet is constructed of 18 gauge steel and is finished in tan, heat resisting, baked on enamel and the front in gold silicone enamel.

The heaters are provided with constant burning automatic safety shut-off pilots and with optional thermostatic control. The control knobs are accessible at the top rear of the heater. The pilot is accessible for lighting through the hinged front.

The heaters are also available with an optional automatic hour to 70,000 BTU per hour.

The heaters are also available with an optional automatic blower, Model B1, for forced air circulating except for Model 230.

Suffixes M, S-1, ST-1, ST-2 and ST-3 indicate control arrangements.

Suffix M —Manual operation.

" S-1—Automatic Pilot.

" ST-1—Self-contained snap action thermostat.

" ST-3—Wall thermostat.

The Models 3200, 3300, 3400 Unvented Circulator and 3244, 3305 Unvented Radiant Circulator Room Heaters are constructed of 22 gauge steel. The cast iron drilled port burners are mounted in a baffle pan or shield which is secured to the bottom of the heater. The air shutter is 20 gauge zinc plated steel. Models 3244 and 3305 are similar but have ceramic radiants mounted over the burners on a 20 gauge steel holder. The heater jackets are finished in tan baked-on enamel. Also with aluminum enamel finish on Models 3200, 3300 and 3400. All heaters are equipped with solid brass valves and designated for automatic or manual ignition.

Inspection and Test

Details of construction were examined by Asst. Architect T. W. Farricker, Committee on Test. The appliances have been approved by the American Gas Association. The report is on file and is part of the record.

Recommendation

On the basis of the test, examination and data filed by the applicant the Committee on Test recommends the approval of the appliance known as Armstrong Gas-fired Heaters, Unvented Circulator, Models 10A, 12, 16, 3200, 3300 and 3400—Unvented Radiant Circulators 3244 and 3305—Vented Circulators 9120, 230, 240, 250, 270, 7150, 7170, 7200 and 7220 for use in New York City when installed in accordance with the requirements of Article 12, Administrative Building Code with a minimum clearance of 6 inches to be maintained between the sides and rear of the heaters and adjacent combustible construction and provided that each heater shall bear a label permanently affixed reading as follows: "Approved by the Board of Standards and Appeals for use in New York City under Calendar Number 196-59-SA."

The Committee further recommends that these room heaters should not be installed in sleeping rooms.

PUBLIC HEARING

Cal. No. 353-30-SR

NOTICE IS HEREBY GIVEN that a public hearing November 20, 1959 at 10 A.M. in Room 909, at 80 Lafayette Street, Manhattan, on the following proposed amendments to the Rules governing the use of equipment for Spraying and Drying of Paints, Varnishes, Lacquers and other inflammable surface Coatings and Storage of such Materials. New Matter in Italics, Matter to be deleted in Brackets.

4. Specification for Spray Booths, Spray Rooms, Dip and Immersing Rooms, Drying Equipment and Material Storage Rooms.

4.1.1 Spray, dip and immersing rooms shall be enclosed on all sides with partitions constructed of incombustible materials with floors in such rooms of concrete. Where such rooms are located over wooden floors, such wooden floors shall be surfaced with 1" of grout adequately reinforced or a mixture of Portland cement, asphalt and sand similarly reinforced. Ceilings over such rooms shall be protected by $\frac{5}{8}$ " unsanded gypsum plaster or $\frac{7}{8}$ " of cement or sanded gypsum plaster on approved 3.0 lb. metal lath or other equivalent fire resisting ceiling protection. Ventilation, lighting and heating for these rooms shall comply with the requirements of these rules. Where additional fire fighting equipment is necessary such equipment shall be furnished in accordance with the direction of the Fire Commissioner. Floor drains leading to the house draining system or the public sewer shall not be permitted. [All] Dip tanks shall be provided with hinged metal covers held open by a fusible link, such covers to be equipped with an opening to permit automatic flooding of the tank with fire extinguishing media of a type and so located as the Fire Commissioner shall direct. *Where the work process, such as conveyorized operation, makes the use of a cover impractical, the dip tank and drain boards shall be protected by an adequate extinguishing system designed for manual and automatic operation and satisfactory to the Fire Commissioner.*

4.3 Drying Equipment.

4.3.1 Gas Fired Drying Ovens Gas fired drying ovens shall be of a type as approved by the Board. Such ovens shall be constructed of metal and incombustible materials so designed as to preclude the direct application of flame to the materials in process. [The exhausts from both the heating compartments and the drying compartment shall be individually equipped with adequate fans and exhaust piping connected directly to the outer air]. *Ventilation shall be provided for each oven of sufficient capacity to maintain an oven vapor concentration at all times during the drying process of less than $\frac{1}{4}$ the low explosive limit of the solvent used. All oven openings shall be maintained at a negative pressure to maintain inward flow. The controls for the safety exhaust and recirculating fans shall be [so] properly interlocked with the gas supply line so that when the gas is flowing the fans are in operation. A time delay relay shall be installed to provide a minimum of four oven volume changes with fresh air and in the case of an indirect fired type of oven simultaneous purging of the combustion chamber before the ignition system may be operated.*

[An extra switch shall be provided to permit the operation of the fans when the gas supply is off]. Each oven shall be equipped with approved gas burning equipment with electrical controls so arranged as to shut off the gas valve when ignition fails or the gas supply pressure drops to 2 inches of water.

The use of a continuous gas pilot light is prohibited unless an automatic gas shut off valve is provided which will shut the gas off at the pilot light when the flame is extinguished or the supply of gas cut off. Electrical pilot ignition shall be of the continuous type or equal in performance, designed for use in high temperatures, with controls so interlocked as to shut off the gas supply when current is interrupted. An auxiliary manually operated gas shut off valve shall be located not nearer than 25 feet from the oven so as to control the gas supply in the event of an emergency. Such ovens shall be adequately insulated on all sides, including the base, which shall have the equivalent of a double thickness of such insulation unless the floor is protected by a 3 inch mat of reinforced concrete placed over and bonded into the existing concrete floor and projecting not less than 6 inches outside the projected area of the equipment or unless an unenclosed clear air space not less than 4 inches above the floor is maintained between the floor and the underside of the oven.

4.3.1.1 *The burner section of gas fired drying ovens shall not be located nearer than 25 feet from spraying or dipping spaces. [Unless such oven is approved for use in explosive atmospheres].*

4.3.2 Electric Infra-red Ray Drying Ovens.

4.3.2.1.1 In drying processed material involving the evaporation of considerable amounts of flammable solvents by infra-red lamps, such installations shall not be confined in small rooms unless such rooms are thoroughly ventilated by a power driven ventilation system of sufficient capacity to provide 100 linear feet of air per minute *over the entire surface of the processed material*: the controls of the ventilation system to be so interlocked with the Infra-Red Ray System that the latter cannot function unless the ventilating system is in operation. When equipped with duct ventilating system, the Infra-Red Ray Oven shall be adequately secured so as to prevent moving.

4.3.2.1.4 *Lamp and resistance heater type drying units shall be separated from spraying and dipping processes complying with these rules by a distance of at least 15 feet or shall be installed in a separate fireproof room.*

4.3.2.1.6 Where there are no conveyors and the material being processed is left stationary in the dryer there shall be an excessive temperature switch to shut off the lamps *or resistance heaters* to avoid overheating the material being processed if it is not removed from the dryer in time.

4.3.3 [The use of these processes shall be limited to metal or other incombustible material requiring paint processing]. *The temperature of the air contacting the processed material shall not be higher than that to which such material can be safely subjected, but not over 350°.*

RULES

Fire Drill Rules, Adopted by the Board of Standards and Appeals, October 5, 1923

(593-23-SR)

DEFINITION OF "FIRE DRILL"

The method and practice of the systematic and orderly vacating of a building by its occupants in case of emergency, panic or fire in the least possible time—by the nearest safe means of exit—and the use of fire appliances which shall be provided for the extinguishing or retarding of fire and the safeguarding of human life.

Rule 1.

In all buildings as defined in Article 1, Section 10 of the Labor Law in which fire drills are required pursuant to Section 279 thereof and in any other building in which such drills are required by the Fire Commissioner pursuant to the power conferred in section 491 of the New York City Charter, it shall be the duty of the owners, lessees or tenants to conduct fire drills monthly and at such other times as the Fire Commissioner may direct.

For the purpose of conducting such fire drills the owner or tenants shall appoint from among their employees such responsible and dependable persons, male or female, who shall efficiently perform the duties of the various positions of the fire drill organization, as specified on the accompanying chart.

It shall be the duty of the owner or tenant to enter in the blank spaces provided for that purpose in said chart the names of persons so selected and post said chart and copies of the rules in a conspicuous place.

Rule 2. Duties of Foreman.

The Foreman or Person in Charge shall direct, enforce and have full charge of the "Fire Drill" in every factory on each floor. Each day before work is begun he shall see that extinguishers, fire hose, fire buckets, etc., are in readiness for use, exit doors are unlocked, aisles are free from obstruction, that stairways, halls, etc., are properly lighted, and shall remedy any dangerous condition found to exist. Immediately after work is commenced he shall check up the Fire Drill Organization list and note if the regularly assigned persons are present; if any are found to be absent, he shall assign other employees (if practicable) to perform their duties.

He shall immediately notify new employees of the existence of the Fire Drill Organization and give them the necessary instructions as to the duties they are to perform, etc.

He shall be familiar with the operation and location of the interior alarm signal box on his floor.

He shall listen for the test signal each morning at the appointed hour and in the event of the test signal not being heard he shall communicate with the superintendent or other person in charge of the building and advise him of the fact. The (Floor Captain's) Foreman's orders are final as to the carrying out of the fire drill on his particular floor.

Rule 3. Duties of Watchmen.

The WATCHMEN shall see that all doors and windows are closed so as to prevent the spread of fire. The WATCHMEN shall be the only persons permitted to remain on the floor during the progress of a fire drill and do so at their own risk. For ordinary purposes only one watchman and a substitute shall be designated. In special cases, however, extra watchmen may be assigned by consent in writing from Fire Commissioner.

Rule 4. Duties of Searchers.

The MALE AND FEMALE SEARCHERS shall search all toilets, dressing rooms and emergency rooms used and frequented by their sex and all other portions of the floor and order all persons, except those authorized to remain, to leave the premises. They are to take care of and assist all persons who may faint or be disabled.

RULES

SEARCHERS shall leave the floor immediately after the last squad leaves.

Rule 5. Duties of Street Alarm Box Runner.

The STREET-ALARM-BOX-RUNNER shall be familiar with the location of the nearest city fire alarm box and know how it is operated.

In ordinary practice fire drills the STREET-ALARM-BOX-RUNNER shall report to the Foreman for orders, and if his services are not required he shall promptly file out of the premises with the other occupants.

Only when a fire actually occurs on his floor, or when ordered to do so by the Foreman, shall the STREET-ALARM-BOX-RUNNER proceed to the street alarm box and send in the fire alarm.

Rule 6. Duties of Fire Brigade.

The fire brigade shall have full charge of the operation of all auxiliary fire fighting apparatus and shall endeavor to extinguish, or at least hold in check until the arrival of the Fire Department, any fire that may occur. When it is necessary for the fire brigade to respond to different floors in the building they shall not use the stairways or fire escapes while the occupants are escaping from the premises.

Rule 7. Duties of Exit Guards.

The EXIT GUARDS shall station themselves at all exit doors leading to fire escapes, stairways, and other means of escape immediately upon the sounding of the alarm. There shall be two guards for each exit, if practicable; one to stand in the hallway holding back the door and the other directly inside on the floor. They are to keep the exit doors open and direct the movements of the persons using these exits and prevent congestion.

EXIT GUARDS shall remain at their stations until all of the occupants of the building have passed their station. Then close their doors and pass out of the building. Upon signal for the occupants to return, EXIT GUARDS shall take their designated stations and remain there until all persons have returned to their respective floors.

Rule 8. Duties of Squad Monitors.

The SQUAD MONITORS, as soon as the alarm is sounded, shall see that the employees under their charge quickly form into line, two abreast, and numbering not more than thirty to each squad. They shall see that all aisles and passageways are cleared of obstructions.

Note: Chairs, stools, baskets, etc., should be pushed under or placed on top of work benches.

MONITORS shall proceed at the head of their respective squads to the exit assigned, and then march up or down the stairs or to other exits as directed by the EXIT GUARDS.

On reaching the sidewalk MONITORS shall keep their squads in order and lead them a reasonable distance from the building, so as not to cause congestion and interference with fire apparatus. When the proper signal is given they shall return to their respective floors at head of their squads.

MONITORS will at all times see that those under their charge conduct themselves in a respectable and orderly manner.

Rule 9. Holding of Drills.

FIRE DRILLS shall be held at least once each month at varied hours of the day, and all of the occupants shall

participate therein simultaneously. Such drills shall conduct all occupants to a place of safety.

Where dual operation interior fire alarm systems are installed as permitted under Rule 11 of the interior fire alarm rules of the Board of Standards and Appeals, the fire drill conducted each month shall include all of the persons on the premises engaged at work for a factory, and drills shall be conducted at least twice, each year in which all of the persons on the premises shall participate simultaneously.

Rule 10. Duties of Owner.

It shall be the duty of the OWNER, LESSEE OR TENANT OF THE BUILDING or his authorized agent or their representatives to personally observe that the "Fire Drill" is held simultaneously on every floor of the building and the participation therein of every occupant of such building. Any FIRE DRILL in which all of the occupants do not participate shall not be considered as complying with the LAW, except as otherwise provided in these rules.

The person or persons representing the OWNERS, LESSEE OR TENANT, who supervises the FIRE DRILL at the building shall submit to an examination by the Division of Fire Prevention as to their experience and general fitness for such duties, and shall be so certified in writing by the FIRE COMMISSIONER.

It shall be the duty of the ENGINEER, SUPERINTENDENT or other PERSON IN CHARGE of a building having an interior fire alarm system to test such system daily immediately after the beginning of business, and to see that all apparatus operated by springs, requiring winding are rewound after each alarm and kept in normal condition for operation.

Rule 11. Duties of Engineer.

Whenever it is necessary to test the fire alarm system at any other time of the day, owing to repairs, etc., being made, the PERSON IN CHARGE OF BUILDING will first notify all Foremen of the several floors of the intended test and likewise notify them when the repairs, etc. are completed. This precaution is taken to prevent confusion and excitement, also misunderstanding of the alarm signals.

It shall also be the duty of the PERSON IN CHARGE OF BUILDING to sound the interior alarm system at irregular intervals, but not less than once each calendar month, for the purpose of holding practice fire drills. He shall keep on the premises a record of such drills, showing the date when held and the required time for all occupants to reach the street or a point of safety outside the building.

The PERSON IN CHARGE OF BUILDING must immediately acquaint new tenants of the existence of the "Fire Drill" Organization and its purport.

Rule 12. Registration.

The name and address of every person, corporation or co-partnership, that will, under professional service, carry on the trade, business or calling of establishing, maintaining or supervising the "Fire Drill" shall be registered in the Fire Department, which Department shall, upon evidence of fitness, grant a certificate to that effect.

RULES

RULES RELATING TO SMOKING IN PROTECTED PORTIONS OF FACTORIES, AND IN SPECIAL CLASSES OF OCCUPANCIES.

Adopted by the Board of Standards and Appeals August 13, 1918, effective September 9, 1918, under the powers conferred upon the Board by Section 718-a, Subsections 2 and 3 (Old Charter) to supplement Section 283 of the Labor Law (Old Section 83c).

[Cal. 1262-18-SR]

Labor Law

Section 283. Smoking.

1. No person shall smoke in a factory. A notice of such prohibition stating the penalty for violation thereof shall be kept posted in every entrance hall, elevator, stair hall and room of a factory in English, and in such other languages as the fire commissioner of the city of New York in such city and elsewhere the commissioner shall direct.

2. The board in its rules may permit smoking in protected portions of a factory, or in such classes of occupancies where in its opinion the safety of the employees will not be endangered thereby. The fire commissioner of the city of New York in such city and elsewhere the commissioner may issue such permits in accordance with rules adopted by the board.

3. The fire commissioner of the city of New York in such city and elsewhere the commissioner shall enforce this section.

RULE 1. Permit.

(a) **Prohibition.** No person shall smoke, or carry a lighted cigar or cigarette in any factory as defined in Article 1, Section 2, of the State Labor Law, nor in any portion of a factory, within the City of New York, except in such protected portions or special classes of occupancies as are specified in Rule 2 of these rules, and then only after the issuance of a permit by the administrative official.

It shall be the joint and several duty of the owner and of the lessee or lessees of the building containing such factory or factories to cause to be posted in each and every entrance hall, stair hall or room throughout the building, as well as in every elevator car, in English, and also in such other language or languages—as the administrative official shall direct, a notice of such prohibition, and the penalty for its violation.

(b) **Application.** Application for such permit shall be made only by the owner of the building on suitable blank forms to be furnished by the administrative official.

(c) **Time Limit.** Such permit shall be for a definite period, not exceeding one year, and shall not be renewed upon the expiration until a reinspection of the premises for which it is issued has been made for the purpose of determining whether existing conditions warrant a renewal.

(d) **Conditions.** The permit shall state the conditions under which the hours between which, and the place or places in such factory where smoking may be permitted, and this

permit shall be framed and kept posted in a conspicuous place in the factory.

(e) **Revocation.** Violation of any of the conditions specified in the permit in addition to incurring such penalties as are prescribed by law, shall be full and sufficient cause for the revocation of such permit by the administrative official, and shall not again issue a permit for the same premises until at least one year has elapsed.

Rule 2. Permissible Cases.

Smoking may be permitted in:

(a) Factories engaged in the manufacture of cigars, cigarettes, or smoking tobacco, when necessary for the efficient conduct of the business, provided that:

(1) No smoking other than that for sampling, testing and experimental purposes is carried on.

(2) Such smoking is conducted in a room provided especially for that purpose, separated from the rest of the building by fireproof or fire-resisting partitions, with all openings therein protected by self-closing fire doors, and further, unless the building is of fireproof construction or provided with an approved automatic sprinkler system, the floor and ceiling of such room shall be covered with fire-retarding material.

(3) Such chemical fire extinguishers as the administrative official may direct are installed.

(4) All waste paper and other inflammable waste materials are deposited in fireproof receptacles.

(b) Factories devoted entirely to one of the following occupancies:

Blacksmithing or horseshoeing;
Boiler making;
Brick, terra cotta or artificial stone works;
Forge shops;
Foundries;
Iron, steel, brass or copper works;
Machine shops;
Smelting;
Stone or monumental works;

provided that in any case:

(1) The building is not of wooden construction;

(2) Such chemical fire extinguishers as the administrative official may direct are installed;

(3) All waste paper and other inflammable waste materials are deposited in fireproof receptacles.

COURT DECISION

Matter of Central Queens Allied Civic Council, Inc. (Children's Bus Service, Inc.) vs. Board:—On October 29, 1957, the Board granted a variance under Section 7, subdivision h, of the Zoning Resolution, to permit a portion of the premises in a residential use district to be occupied for parking of drivers' cars, substantially as proposed and as indicated on the plans filed with this application; and also to permit under Section 7, subdivision e, of the Zoning Resolution, for a term of twenty years the driveways for proposed garage, which are located wholly within the unrestricted district, to 141st Avenue, as shown on plans; Calendar Number 146-57-BZ; Premises 219-29 141st Avenue, north side, 100.24 feet east of 219th Street, Springfield, Borough of Queens.

At Special Term, Supreme Court, Mr. Justice Daly sustained the Board and dismissed the petition in the following opinion:

"In re Central Queens Allied Civic Council, Inc. (Children's Bus Service, Inc.)—Application for an order reviewing and annulling a determination of the respondent Board of Standards and Appeals. Said respondent granted a variance to the intervenor respondent with respect to the use of certain real property in Laurelton, Queens County, New York. The property in question is located on the northerly side of One Hundred and Forty-first Avenue about 100 feet east of Two Hundred and Nineteenth Street. It is an irregular plot having a frontage of 294 feet on One Hundred and Forty-first Avenue and a maximum depth of 450 feet. The land at present is vacant and most of it is zoned for unrestricted use. A strip of 100 feet along One Hundred and Forty-first Avenue is zoned as residential. Along the rear of the property the Long Island Railroad has a right of way on which there is a double track railroad slightly above grade. To the east of the premises the land is used for storage and delivery of fuel oil. North of that property are coal silos. The variance granted by the respondent gave the owner the right, for a limited time, of ingress and egress to a garage which will be built entirely on that portion of the premises which is zoned 'unrestricted' and for the parking of employees' cars. Respondent board imposed certain conditions with respect to the planting of hedges, &c. There appears to be no other practicable means of ingress and egress to the garage except from One Hundred and Forty-first Avenue. Under the circumstances it cannot be said that respondent board was arbitrary or capricious in its determination. Accordingly, the application is denied and the petition dismissed. Submit order." (N. Y. Law Journal, July 30, 1959, page 7).

NOTICE

In accordance with sound management practice and due to budgetary limitations, two changes have been instituted in the Bulletin of the Board of Standards and Appeals. These changes, in compliance with the requirements of Chapter 27, Section 665 of the Charter of the City of New York and the rules of the Board, are as follows:

1—CALENDAR: Notices of public hearing on applications for zoning variances will be published twice: first publication, listing new cases set for hearing, in the Bulletin available to the public at least 14 days before the date of hearing; second publication, in the last Bulletin available to the public immediately prior to the hearing date. The second publication will be augmented with a listing of cases laid over from previous hearings. Attention is directed to the MINUTES of such previous hearings, where the reasons for laid over cases will have been published. Notices of public hearing on applications for approval of materials and appliances will be published once, at least 10 days prior to the hearing date.

2—MINUTES: The publication of the "digest" of the applicant's statement has been discontinued, except that the administrative orders, decisions, etc., which are the subject of each application or appeal will be published. The summary of information given in the Appeal Form (Form A) shall be published for Administrative Appeals. The Board will continue to publish such other matters as it may deem advisable.

PUBLIC HEARING

Cal. No. 353-30-SR

NOTICE IS HEREBY GIVEN that a public hearing November 20, 1959 at 10 A.M. in Room 909, at 80 Lafayette Street, Manhattan, on the following proposed amendments to the Rules governing the use of equipment for Spraying and Drying of Paints, Varnishes, Lacquers and other inflammable surface Coatings and Storage of such Materials. New Matter in Italics, Matter to be deleted in Brackets.

4. Specification for Spray Booths, Spray Rooms, Dip and Immersing Rooms, Drying Equipment and Material Storage Rooms.

4.1.1 Spray, dip and immersing rooms shall be enclosed on all sides with partitions constructed of incombustible materials with floors in such rooms of concrete. Where such rooms are located over wooden floors, such wooden floors shall be surfaced with 1" of grout adequately reinforced or a mixture of Portland cement, asphalt and sand similarly reinforced. Ceilings over such rooms shall be protected by $\frac{5}{8}$ " unsanded gypsum plaster or $\frac{7}{8}$ " of cement or sanded gypsum plaster on approved 3.0 lb. metal lath or other equivalent fire resisting ceiling protection. Ventilation, lighting and heating for these rooms shall comply with the requirements of these rules. Where additional fire fighting equipment is necessary such equipment shall be furnished in accordance with the direction of the Fire Commissioner. Floor drains leading to the house draining system or the public sewer shall not be permitted. [All] Dip tanks shall be provided with hinged metal covers held open by a fusible link, such covers to be equipped with an opening to permit automatic flooding of the tank with fire extinguishing media of a type and so located as the Fire Commissioner shall direct. *Where the work process, such as conveyorized operation, makes the use of a cover impractical, the dip tank and drain boards shall be protected by an adequate extinguishing system designed for manual and automatic operation and satisfactory to the Fire Commissioner.*

4.3 Drying Equipment.

4.3.1 Gas Fired Drying Ovens Gas fired drying ovens shall be of a type as approved by the Board. Such ovens shall be constructed of metal and incombustible materials so designed as to preclude the direct application of flame to the materials in process. [The exhausts from both the heating compartments and the drying compartment shall be individually equipped with adequate fans and exhaust piping connected directly to the outer air]. *Ventilation shall be provided for each oven of sufficient capacity to maintain an oven vapor concentration at all times during the drying process of less than $\frac{1}{4}$ the low explosive limit of the solvent used. All oven openings shall be maintained at a negative pressure to maintain inward flow. The controls for the safety exhaust and recirculating fans shall be [so] properly interlocked with the gas supply line so that when the gas is flowing the fans are in operation. A time delay relay shall be installed to provide a minimum of four oven volume changes with fresh air and in the case of an indirect fired type of oven simultaneous purging of the combustion chamber before the ignition system may be operated.*

[An extra switch shall be provided to permit the operation of the fans when the gas supply is off]. Each oven shall be equipped with approved gas burning equipment with electrical controls so arranged as to shut off the gas valve when ignition fails or the gas supply pressure drops to 2 inches of water.

The use of a continuous gas pilot light is prohibited unless an automatic gas shut off valve is provided which will shut the gas off at the pilot light when the flame is extinguished or the supply of gas cut off. Electrical pilot ignition shall be of the continuous type or equal in performance, designed for use in high temperatures, with controls so interlocked as to shut off the gas supply when current is interrupted. An auxiliary manually operated gas shut off valve shall be located not nearer than 25 feet from the oven so as to control the gas supply in the event of an emergency. Such ovens shall be adequately insulated on all sides, including the base, which shall have the equivalent of a double thickness of such insulation unless the floor is protected by a 3 inch mat of reinforced concrete placed over and bonded into the existing concrete floor and projecting not less than 6 inches outside the projected area of the equipment or unless an unenclosed clear air space not less than 4 inches above the floor is maintained between the floor and the underside of the oven.

4.3.1.1 *The burner section of gas fired drying ovens shall not be located nearer than 25 feet from spraying or dipping spaces. [Unless such oven is approved for use in explosive atmospheres].*

4.3.2 Electric Infra-red Ray Drying Ovens.

4.3.2.1.1 In drying processed material involving the evaporation of considerable amounts of flammable solvents by infra-red lamps, such installations shall not be confined in small rooms unless such rooms are thoroughly ventilated by a power driven ventilation system of sufficient capacity to provide 100 linear feet of air per minute *over the entire surface of the processed material*: the controls of the ventilation system to be so interlocked with the Infra-Red Ray System that the latter cannot function unless the ventilating system is in operation. When equipped with duct ventilating system, the Infra-Red Ray Oven shall be adequately secured so as to prevent moving.

4.3.2.1.4 *Lamp and resistance heater type drying units shall be separated from spraying and dipping processes complying with these rules by a distance of at least 15 feet or shall be installed in a separate fireproof room.*

4.3.2.1.6 Where there are no conveyors and the material being processed is left stationary in the dryer there shall be an excessive temperature switch to shut off the lamps or resistance heaters to avoid overheating the material being processed if it is not removed from the dryer in time.

4.3.3 [The use of these processes shall be limited to metal or other incombustible material requiring paint processing]. *The temperature of the air contacting the processed material shall not be higher than that to which such material can be safely subjected, but not over 350°.*

RULES

Fire Drill Rules, Adopted by the Board of Standards and Appeals, October 5, 1923

(593-23-SR)

DEFINITION OF "FIRE DRILL"

The method and practice of the systematic and orderly vacating of a building by its occupants in case of emergency, panic or fire in the least possible time—by the nearest safe means of exit—and the use of fire appliances which shall be provided for the extinguishing or retarding of fire and the safeguarding of human life.

Rule 1.

In all buildings as defined in Article 1, Section 10 of the Labor Law in which fire drills are required pursuant to Section 279 thereof and in any other building in which such drills are required by the Fire Commissioner pursuant to the power conferred in section 491 of the New York City Charter, it shall be the duty of the owners, lessees or tenants to conduct fire drills monthly and at such other times as the Fire Commissioner may direct.

For the purpose of conducting such fire drills the owner or tenants shall appoint from among their employees such responsible and dependable persons, male or female, who shall efficiently perform the duties of the various positions of the fire drill organization, as specified on the accompanying chart.

It shall be the duty of the owner or tenant to enter in the blank spaces provided for that purpose in said chart the names of persons so selected and post said chart and copies of the rules in a conspicuous place.

Rule 2. Duties of Foreman.

The Foreman or Person in Charge shall direct, enforce and have full charge of the "Fire Drill" in every factory on each floor. Each day before work is begun he shall see that extinguishers, fire hose, fire buckets, etc., are in readiness for use, exit doors are unlocked, aisles are free from obstruction, that stairways, halls, etc., are properly lighted, and shall remedy any dangerous condition found to exist. Immediately after work is commenced he shall check up the Fire Drill Organization list and note if the regularly assigned persons are present; if any are found to be absent, he shall assign other employees (if practicable) to perform their duties.

He shall immediately notify new employees of the existence of the Fire Drill Organization and give them the necessary instructions as to the duties they are to perform, etc.

He shall be familiar with the operation and location of the interior alarm signal box on his floor.

He shall listen for the test signal each morning at the appointed hour and in the event of the test signal not being heard he shall communicate with the superintendent or other person in charge of the building and advise him of the fact. The (Floor Captain's) Foreman's orders are final as to the carrying out of the fire drill on his particular floor.

Rule 3. Duties of Watchmen.

The WATCHMEN shall see that all doors and windows are closed so as to prevent the spread of fire. The WATCHMEN shall be the only persons permitted to remain on the floor during the progress of a fire drill and do so at their own risk. For ordinary purposes only one watchman and a substitute shall be designated. In special cases, however, extra watchmen may be assigned by consent in writing from Fire Commissioner.

Rule 4. Duties of Searchers.

The MALE AND FEMALE SEARCHERS shall search all toilets, dressing rooms and emergency rooms used and frequented by their sex and all other portions of the floor and order all persons, except those authorized to remain, to leave the premises. They are to take care of and assist all persons who may faint or be disabled.

SEARCHERS shall leave the floor immediately after the last squad leaves.

Rule 5. Duties of Street Alarm Box Runner.

The STREET-ALARM-BOX-RUNNER shall be familiar with the location of the nearest city fire alarm box and know how it is operated.

In ordinary practice fire drills the STREET-ALARM-BOX-RUNNER shall report to the Foreman for orders, and if his services are not required he shall promptly file out of the premises with the other occupants.

Only when a fire actually occurs on his floor, or when ordered to do so by the Foreman, shall the STREET-ALARM-BOX-RUNNER proceed to the street alarm box and send in the fire alarm.

RULES

Rule 6. Duties of Fire Brigade.

The fire brigade shall have full charge of the operation of all auxiliary fire fighting apparatus and shall endeavor to extinguish, or at least hold in check until the arrival of the Fire Department, any fire that may occur. When it is necessary for the fire brigade to respond to different floors in the building they shall not use the stairways or fire escapes while the occupants are escaping from the premises.

Rule 7. Duties of Exit Guards.

The EXIT GUARDS shall station themselves at all exit doors leading to fire escapes, stairways, and other means of escape immediately upon the sounding of the alarm. There shall be two guards for each exit, if practicable; one to stand in the hallway holding back the door and the other directly inside on the floor. They are to keep the exit doors open and direct the movements of the persons using these exits and prevent congestion.

EXIT GUARDS shall remain at their stations until all of the occupants of the building have passed their station. Then close their doors and pass out of the building. Upon signal for the occupants to return, EXIT GUARDS shall take their designated stations and remain there until all persons have returned to their respective floors.

Rule 8. Duties of Squad Monitors.

The SQUAD MONITORS, as soon as the alarm is sounded, shall see that the employees under their charge quickly form into line, two abreast, and numbering not more than thirty to each squad. They shall see that all aisles and passageways are cleared of obstructions.

Note: Chairs, stools, baskets, etc., should be pushed under or placed on top of work benches.

MONITORS shall proceed at the head of their respective squads to the exit assigned, and then march up or down the stairs or to other exits as directed by the EXIT GUARDS.

On reaching the sidewalk MONITORS shall keep their squads in order and lead them a reasonable distance from the building, so as not to cause congestion and interference with fire apparatus. When the proper signal is given they shall return to their respective floors at head of their squads.

MONITORS will at all times see that those under their charge conduct themselves in a respectable and orderly manner.

Rule 9. Holding of Drills.

FIRE DRILLS shall be held at least once each month at varied hours of the day, and all of the occupants shall participate therein simultaneously. Such drills shall conduct all occupants to a place of safety.

Where dual operation interior fire alarm systems are installed as permitted under Rule 11 of the interior fire alarm rules of the Board of Standards and Appeals, the fire drill conducted each month shall include all of the

persons on the premises engaged at work for a factory, and drills shall be conducted at least twice, each year in which all of the persons on the premises shall participate simultaneously.

Rule 10. Duties of Owner.

It shall be the duty of the OWNER, LESSEE OR TENANT OF THE BUILDING or his authorized agent or their representatives to personally observe that the "Fire Drill" is held simultaneously on every floor of the building and the participation therein of every occupant of such building. Any FIRE DRILL in which all of the occupants do not participate shall not be considered as complying with the LAW, except as otherwise provided in these rules.

The person or persons representing the OWNERS, LESSEE OR TENANT, who supervises the FIRE DRILL at the building shall submit to an examination by the Division of Fire Prevention as to their experience and general fitness for such duties, and shall be so certified in writing by the FIRE COMMISSIONER.

It shall be the duty of the ENGINEER, SUPERINTENDENT or other PERSON IN CHARGE of a building having an interior fire alarm system to test such system daily immediately after the beginning of business, and to see that all apparatus operated by springs, requiring winding are rewound after each alarm and kept in normal condition for operation.

Rule 11. Duties of Engineer.

Whenever it is necessary to test the fire alarm system at any other time of the day, owing to repairs, etc., being made, the PERSON IN CHARGE OF BUILDING will first notify all Foremen of the several floors of the intended test and likewise notify them when the repairs, etc. are completed. This precaution is taken to prevent confusion and excitement, also misunderstanding of the alarm signals.

It shall also be the duty of the PERSON IN CHARGE OF BUILDING to sound the interior alarm system at irregular intervals, but not less than once each calendar month, for the purpose of holding practice fire drills. He shall keep on the premises a record of such drills, showing the date when held and the required time for all occupants to reach the street or a point of safety outside the building.

The PERSON IN CHARGE OF BUILDING must immediately acquaint new tenants of the existence of the "Fire Drill" Organization and its purport.

Rule 12. Registration.

The name and address of every person, corporation or co-partnership, that will, under professional service, carry on the trade, business or calling of establishing, maintaining or supervising the "Fire Drill" shall be registered in the Fire Department, which Department shall, upon evidence of fitness, grant a certificate to that effect.

PUBLIC HEARINGS

Tuesdays at 10 a.m. and 2 p.m.

Special meetings as published in this Bulletin.

All hearings are held at 80 Lafayette Street, 9th Floor, Borough of Manhattan.

HOURS OF CONSULTATION

10 A.M. to 1 P.M.

Any person desiring to consult the Chairman, the Commissioners, Director or the Engineers, pertaining to the work of the board, will be seen only between the hours of ten in the morning and one in the afternoon—Saturdays excepted.

NOTICE

In accordance with sound management practice and due to budgetary limitations, two changes have been instituted in the Bulletin of the Board of Standards and Appeals. These changes, in compliance with the requirements of Chapter 27, Section 665 of the Charter of the City of New York and the rules of the Board, are as follows:

1—CALENDAR: Notices of public hearing on applications for zoning variances will be published twice: first publication, listing new cases set for hearing, in the Bulletin available to the public at least 14 days before the date of hearing; second publication, in the last Bulletin available to the public immediately prior to the hearing date. The second publication will be augmented with a listing of cases laid over from previous hearings. Attention is directed to the MINUTES of such previous hearings, where the reasons for laid over cases will have been published. Notices of public hearing on applications for approval of materials and appliances will be published once, at least 10 days prior to the hearing date.

2—MINUTES: The publication of the "digest" of the applicant's statement has been discontinued, except that the administrative orders, decisions, etc., which are the subject of each application or appeal will be published. The summary of information given in the Appeal Form (Form A) shall be published for Administrative Appeals. The Board will continue to publish such other matters as it may deem advisable.

THE RESOLUTION—

WHEREAS, the report of a Committee on Test reads:

831-47-SA—Amendment to resolution as to additional models of dispensing pumps.

A. O. Smith requested by letter dated April 21, 1959 that the resolution adopted November 18, 1947 and amended through December 13, 1955 under Calendar Number 831-47-SA be amended so as to include additional gasoline pumps. The application was reopened by a vote of the Board, May 19, 1959.

PURPOSE: For dispensing gasoline.

DESCRIPTION: The requested Model, Series 480, is basically the same as the Model L-3, approved by the Board December 13, 1955 under Calendar Number 831-47-SA except that the cabinet has been shortened and the lights have been removed. The components have not been changed. The requested model has been approved by the Underwriters' Laboratory, under MH 1912.

RECOMMENDATION: The Committee on Test recommends that the resolution adopted November 18, 1947 and amended through December 13, 1955 under Calendar Number 831-47-SA be amended so as to include the additional Model—Series 480, Gasoline Dispensing Pump on condition that the requirements of the resolution adopted December 13, 1955 under Calendar Number 831-47-SA be complied with.

THE RESOLUTION—

WHEREAS, the report of a Committee on Test reads:
146-53-SM—Wilson Albrecht Co., Inc., Minneapolis, Minn.,
filed February 20, 1953 for approval of the Waco Steel Scaffolding for use in New York City under the provisions of the Demolition Rules of the Board. The application was set for dismissal October 7, 1958 but was removed from the dismissal list at the request of the applicant.

USE: Scaffold on construction jobs.

DESCRIPTION: The scaffold consists of four basic parts; and frames, cross braces, guard rails and guard rail posts. The frames are fabricated from tubing supplied by Republic Steel having an outside diameter of $1\frac{1}{8}$ " and a wall thickness of 0.09" and 1.05" outside diameter and a wall thickness of 0.072. The cross braces are of angles in the following sizes: $1\frac{1}{4}$ " x $1\frac{1}{4}$ " x $\frac{1}{8}$ "; $1\frac{1}{2}$ " x $1\frac{1}{2}$ " x $\frac{1}{8}$ "; $1\frac{3}{4}$ " x $1\frac{3}{4}$ " x $\frac{1}{8}$ " and $1\frac{1}{2}$ " x $1\frac{1}{2}$ " x $\frac{3}{16}$ " and are made of rail steel.

INSPECTION & TEST: A scaffold consisting of three panels—four frames, two tiers high was tested in the presence of Ass't. Engr. J. A. Darts.

The frames were spaced 7'-0" on centers giving a total of 21'-0" of length and as each frame was 5'-0" wide, the test scaffold was 105 sq. ft. in area and 10'-0" high.

The ultimate load reached was 19,000 lbs. which was held for approximately 20 minutes and then the test structure collapsed.

Evaluation of test results:

Imposed load	=	19,000
Tare weight, 105 sq. ft. of planking @		
5 lbs. per sq. ft.	=	525
Frames & Braces	=	460
		19,985 lbs.

Load carried on each frame = $19985 \div 4 = 4996$ lbs.

The Committee has set up the following factors of safety:

Heavy Duty Scaffold 75 lbs. per sq. ft. F.S of 2.5 on live load and F.S of 2 on the dead load.

Medium Duty—50 lbs. per sq. ft. and Light Duty—25 lbs. per sq. ft. F.S of 2.5 for live load and 1.5 for dead load.

Computation for Heavy Duty:

7'-0" Bent Spacing — Area carried =	35 sq. ft.
Live Load = 35 sq. ft. x 75 lbs.	
sq. ft.	= 2625
F. S of 2.5 = 2625 x 2.5	= 6562
Dead Load	= 450

Total Load 7012 lbs.

Following the same method of computation changing only the bent spacing to 6'-0" and 5'-0", it was noted that in all cases for the heavy duty use the scaffold did not measure up to the computed loads.

Medium Duty:

7'-0" Bent spacing — areas carried =	35 sq. ft.
Live Load = 1750 lbs. = 35 x 50	
F.S of 2.5 = 1750 x 2.5	4375
Dead Load with F.S of 1.5	338

Total Load 4713 lbs.

Useable Load to be carried on 1 frame:

4996-4713	=	283 lbs.
Added Frames = 283 ÷ 75		3 frames
6'-0" Bent Spacing — Total Load — Live & Dead =	4050	
Useable Load = 4996 — 4050 =	946	
Added Frames = 946 ÷ 75 =	12 frames	
5'-0" Bent Spacing — Total Load — Live & Dead =	3391	
Useable Load = 4996 — 3391 =	1605	
Added Frames = 1605 ÷ 75 =	21 frames	
Light Duty:		
10'-0" — Total Load — Live & Dead =	3575	
Useable Load = 4996 — 3575 =	1421	
Added Frames = 1421 ÷ 75 =	19 frames	
9'-0" — Total Load — Live & Dead =	3325	
Useable Load = 4996 — 3325 =	1671	
Added Frames = 1671 ÷ 75 =	22 frames	

RECOMMENDATION: On the basis of tests, the Committee on Test recommends the approval, under the provisions of C26-191.0 Administrative Building Code and Rule 7.5.18 of the Demolition Rules of the Board, of the Waco Steel Scaffolding as herein described with the following limitation.

1. The scaffold shall not be used for heavy duty loads, or any load over 50 lbs. having a maximum of 75 lbs./sq.ft. as defined under Rule 1.24.3 of the Demolition Rules.

2. Medium Duty Scaffold — Maximum Load 50 lbs/sq.ft. as defined under Rules 1.24.10.

Bent Spacing	7'-0"	6'-0"	5'-0"
Max. Height	20'-0"	65'-0"	110'-0"

Light Duty Scaffold — Maximum Load — 25 lbs./sq.ft. as defined under Rule 1.24.7.

Bent Spacing	10'-0"	9'-0"	8'-0"
Max. Height	100'-0"	115'-0"	125'-0"

The Committee further recommends that during the course of erection, and all times thereafter, the scaffold shall be adequately tied to the building every two stories but not more than 25'-0" vertically and 28'-0" horizontally in a manner as shown on drawings which are on file with and are part of the record.

The Committee further recommends that the frames shall be set on suitable sills of a minimum size 2" x 12" but in all cases the owner-manufacturer shall submit his erection plans to the Department of Buildings so that the methods of construction outlined in the resolution and the subsurface conditions may be investigated and checked, that signs shall be conspicuously posted every 50 feet along the planked platform level showing the allowable live load per sq.ft. and further that all component parts of the scaffold shall be kept in perfect state of repair, properly painted or otherwise treated to prevent corrosion.

The Committee further recommends that the erection and design of the scaffold shall be under the responsible supervision of the owner-manufacturer and all scaffolds shall be stamped "Approved by the Board of Standards and Appeals for use in New York City under Calendar Number 146-53-SM."

THE RESOLUTION—

WHEREAS, the report of a Committee on Test reads: 502-53-SM—Amendment to resolution as to change of thickness of SprayCraft Fire Retardant.

Smith & Kanzler Corp., Linden, New Jersey, requested by letter dated August 26, 1958 that the resolution adopted December 4, 1956 under Calendar Number 502-53-SM be amended so as to show a change of thickness of Spray Craft Fire Retardant (Sprayed Asbestos) as a component part of a fire resistive floor and ceiling construction. The application was reopened by a vote of the Board, October 7, 1958.

PURPOSE: To be used as a fire retardant for floor and ceiling construction.

DESCRIPTION: There has been no change in the material from that previously approved; the difference being in the thickness to which it is applied on the steel beam and the underside of the cellular steel floor.

INSPECTION AND TEST: The material was tested, as part of a complete floor and ceiling construction, in accordance with the requirements of C26-588.0 through C26-590 and C26-596 through C26-599.0 Administrative Building Code at the Underwriters' Laboratory.

The construction was similar to the construction approved December 4, 1956 under Calendar Number 502-53-SM except that the material SprayCraft was applied to a thickness of 1/2 inch to the underside of the cellular steel floor units instead of 1 1/2 inches and 1 7/8 inches of Spraycraft from the flanges and face of the beam instead of 3 1/8 inches.

The test was discontinued at the end of 5 hours, 7 minutes and at that time the transmitted temperature through the floor assembly was still below the limiting maximum. The average temperature on the beam was also below the limiting maximum of 1000°F but one thermocouple reached the limiting maximum of 1200°F at 4 hours, 30 minutes. The complete report Underwriters' Laboratory Retardant 2923-4 is on file with and is part of the record.

RECOMMENDATION: The Committee on Test recommends that the resolution adopted December 4, 1956 under Calendar Number 502-53-SM be amended so as to include the type of construction, as herein described, namely, the reduction in the thickness of the material SprayCraft to the underside of the steel deck to 1/2 inch and to 1 7/8 inches from the flange and faces of the steel beam, as a four hour fire resistive floor and ceiling construction, on condition that the requirements of the resolution adopted December 4, 1956 under Calendar Number 502-53-SM are complied with.

WHEREAS, the report of a Committee on Test reads: 489-54-SA—Amendment as to additional oil burner and marketing under additional trade names.

Delco Appliance Division, General Motors Corp., requested by letter dated May 28, 1959 that the resolution adopted September 25, 1956 and amended at various times through October 28, 1958 under Calendar No. 489-54-SA be reopened and amended so as to include additional models of oil burners and permission to market under additional trade names.

DESCRIPTION: The requested Model Delco Oil Burner, Model 700 has been approved by the Board under Cal. #551-51-SA and the request to transfer to Cal. #489-54-SA is based on the standardizing of one name plate and company efficiency. The Model 600 is similar to the Model 700, difference being in the gph, the 700 having a capacity of 7 gph and the 600 having 6 gph.

RECOMMENDATION: The Committee on Test recommends that the resolution adopted September 25, 1956 and amended through October 28, 1958 be reopened and amended so as to include the Delco Oil Burner, Models 600 and 700 and permission to market under the additional trade names of HM 2.5-6 by the General Automatics Product Corp. and the trade name of D-6 by Petroleum Heat and Power Co., Inc., on condition that the requirements of the resolution adopted September 25, 1956 under Calendar No. 489-54-SA are complied with.

THE RESOLUTION—

WHEREAS, the report of a Committee on Test reads: 484-56-SA—Bryant Gas-fired Warm Air Gravity Furnace, Model 90-GS-57, approval of.

The Bryant Division of Carrier Corp., Mineola, N. Y., filed June 15, 1956 an application with the Board of Standards and Appeals for approval of the appliance known as Bryant Gas-fired Warm Air Gravity Furnace, Model 90-GS-57 for use in New York City under the provisions of Article 12, Administrative Building Code.

PURPOSE: Gas-fired warm air gravity furnace for domestic use.

DESCRIPTION: The furnace is an assembly of parts, namely a cabinet, burner, heat exchanger, draft diverter and controls.

The heat exchanger is of the drum-tube design, constructed of 16 gauge steel with continuous weld, 16 gauge burner shield on both sides of axial burner, touching the rounded back of combustion chamber.

The heater cabinet is a heavy gauge with Bryant gray

finish and is lined with aluminum foil fiber-glas insulation. Has cast iron axial burners with raised drilled ports. Draft hood-rear panel easily removed for access to exchanger tubes.

The controls are Bryant #634 Thermac, Diaphragm valve, gas pressure regulator, Bryant 2H automatic pilot. Pilot gas filter (mfg. gas only) for Natural, Manufactured and Mixed Gases. Diaphragm valve, thermocouple pilot with automatic 100% shut-off valve for L. P. gas and gas pressure regulator for L. P. air/gas.

Standard equipment Manual Pilot Valve and Manual Shut-off valve.

INSPECTION AND TEST: Details of construction were examined by Ass't. Architect T. W. Farricker, Committee on Test. The furnace has been tested and approved by the American Gas Association. The complete report is on file with, and is part of the record.

RECOMMENDATION: On the basis of the examination, test and data filed by the applicant, the Committee on Test recommends the approval of the appliance known as Bryant Gas-fired Warm Air Gravity Furnace, Model 90-GS-57, for the use in New York City when installed in accordance with this report and the requirements of Article 12, Administrative Building Code with a minimum of 6 inches (on all sizes) between adjacent combustible building structure.

The Committee on Test also recommends that the units shall not be installed in garages or places of explosive atmosphere and further that the appliance bear a label permanently affixed reading, "Approved by the Board of Standards and Appeals for use in New York City under Calendar Number 484-56-SA."

THE RESOLUTION—

WHEREAS, the report of a Committee on Test reads:

644-56-SA—The Stewart-Warner Corp., Lebanon, Ind., filed Sept. 6, 1956 for approval of Winkler Sectional Gas-fired Forced Air Furnaces, Models WBG 90, 120, 150—WCG 90, 120, 150—WVG 90, 120, 150 for use in New York City under the provisions of Article 12, of the Administrative Building Code.

USE: For domestic control heating. Not to be used in garages or places of explosive atmosphere.

DESCRIPTION: These furnaces are of the conventional warm air type and are made in three basic styles, namely.

1. Basement or Lo-Boy known as the WBG model, having 19 gauge steel casing with a Hammerloid gray baked-on enamel finish and pan type bottom with two heavy gauge steel skids. Casing interior lined with foil-faced cellular asbestos sheets. Heat exchanger of 14 gauge sectional steel continuously welded, each section having removable aluminized steel flue baffles and its own pressed steel ribbon type burners with stainless steel ports handling 30,000 BTU per hour, and a built-in draft diverter. Winkler automatic gas

controls are completely encased in cabinet. Pilot failure results in immediate 100% shutdown of main gas valve. Blower-LAU No. A12-3-22T7, Delco Motor No. A8280-115V, 60CY, 1 phase, rubber mounted in rear of heat exchanger, also provided with oversized filters inside casing.

2. The Vertical type or upflow known as the WVG Model, has an LAU No. A10 or Viking W1110 blower with a Delco Motor No. A8280, 115V, 60CY 1 phase, mounted beneath the heat exchanger. The casing is 21 gauge steel, same finish as WBG Model. Also provided with an oversized filter installed in rack near the bottom on either side or on the bottom. The WBG and WVG Models has the burners mounted beneath the heat exchanger.

3. The Counterflow type known as the WCG Models, has a blower and motor similar to Models WBG and WVG. The casing is 16 gauge steel, same finish as on above mentioned models. Filter may be put on upper left or right sides or top inlet filter consists of two triangular filter supports and two filters. This Model has the burner mounted above the heat exchanger.

The WBG (Lo-Boy) and WVG (Vertical) Models are approved for installation for combustible flooring without any revision. The WCG (Counterflow) Model is approved for installation on combustible flooring provided a special combustible flooring base is used which is supplied as optional equipment.

The above furnaces are made in three, four and five section units with inputs of 90,000 BTU, 120,000 BTU and 150,000 BTU respectively.

INSPECTION AND TEST: All details of construction were examined by Ass't. Architect, T. W. Farricker, Committee on Test. The furnaces listed in this application were tested and approved by the American Gas Association. The report is on file and is part of the record.

RECOMMENDATION: The Committee on Test recommends the approval of the appliance known as Winkler Sectional Gas-Fired Air Furnace, Models WBG 90, 120, 150—WCG 90, 120, 150—WVG 90, 120, 150 for use in New York City under the provisions of Article 12 of the Administrative Building Code, and that the Winkler Gas-fired Furnaces may be installed with the approved minimum reduced clearances in inches from combustible construction in accordance with the test of the American Gas Association as stated on the tags affixed to the units.

In all cases however, adequate ventilation shall be provided for and clearances shall be sufficient to allow for proper servicing of the furnace. These furnaces shall not be installed in garages or places of explosive atmosphere and each furnace shall bear a label, permanently affixed, reading "Approved by the Board of Standards and Appeals for use in New York City under Calendar Number 644-56-SA".

THE RESOLUTION—

WHEREAS, the report of a Committee on Test reads:
873-56-SA APPLICANT Maytag Co., Newton, Iowa Filed December 11, 1956 FOR APPROVAL OF: Maytag Automatic Washer, Models 123 & 123S & 123CM for use in New York City under the provisions of the Submerged Inlet Rules of the Board.

USE: Automatic Washing Machine, 9 lb. capacity.

DESCRIPTION: The requested washing machine is similar to the washing machine Model AMP approved by the Board for the same company under Cal. No. 286-49-SA the difference being in the cabinet styling. There has been no change in the internal construction of the machine.

INSPECTION AND TESTS: Details of construction were examined by Ass't Engr. J. A. Darts and the details of the requested models were compared with the details of the previously approved model.

RECOMMENDATION: The Committee on Test recommends the approval of the Maytag Automatic Washer, Models 123 & 123S & 123 CM under C26-191.0 Administrative Building Code as meeting the requirements of the Submerged Inlet Rules of the Board, on condition that each appliance bear a label, permanently fixed, reading "Approved by the Board of Standards and Appeals for use in New York City under Cal. No. 873-56-SA."

The washers may be installed in battery installation provided the connections to the waste line shall be in accordance with the following:

Maximum No. per Battery	Waste Line Diameter
3	2"
12	3"
30	4"

Slop Sink Requirements: Water line diameter 2½ in. to 4 in. slop sink 3 ft. x 3 ft. x 3 ft. All slop sinks to have mushroom strainers having a diameter the same size as the waste line.

The foregoing table is based upon there being no specific provisions for this type of equipment in C26-1291.0 wherein the fixture equivalents can be determined from the table contained therein for this equipment when connected in batteries and in addition, the discharge pump on each individual washing machine unit greatly facilitates the rate of discharge to the waste line. In all cases the size of the trap and branch to the soil stack from the slop sink, to be one commercial size larger than the branch line header connection in the battery units and the requirements of the Electric Code shall be met.

THE RESOLUTION—

WHEREAS, the report of a Committee on Test reads:
507-57-SM—Armstrong Cork Co., Lancaster, Pa., filed June 27, 1957 for approval of Armalite for use in New York City

under the provisions of C26-191.0 Administrative Building Code.

USE: Low temperature combustible insulation.

DESCRIPTION: Armalite is a white foamed plastic insulation in board form and is used for insulation at temperature range from 50°F below zero to 160°F. The board is formed from beads of polystyrene which are expanded into light pellets each having an outer skin and a core of microscopic pores. In a secondary expansion operation, these pellets are confined in a mold and further expanded while at the same time the pellets are fused one to another and an essentially solid foam is produced as this process is conducted at a temperature where the entire mass is plastic.

INSPECTION: The applicant has submitted test results conducted in accordance with the requirements of Military Specifications MIL-p-16591D and A.S.T.M. specifications and successfully met the requirements. The complete report is on file with and is part of the record.

RECOMMENDATION: The Committee on Test recommends the approval of Armalite for voluntary installation as a combustible insulation below 100°F under the provisions of C26-191.0 Administrative Building Code. The Committee further recommends the approval of this material as an insulating material which may be applied by means of an approved cold setting adhesive or mortar to the inside surface of an exterior masonry wall without applying the furring as set forth under C26-467.0.d and further that this material may be used as combustible insulation material as set forth under C26-619.0 and as a roof insulation as set forth under C26-680.2.2, on condition that the cartons in which the material is marketed shall be tagged, stamped or labeled "Approved by the Board of Standards and Appeals for use in New York City under Calendar Number 507-57-SM."

THE RESOLUTION—

WHEREAS, the report of a Committee on Test reads:

155-58-SM—American Welding & Manufacturing Company filed March 6, 1958 for approval of the Amweld 1¾ Commercial Fire Door for use in New York City under the provisions of C26-610.0 Administrative Building Code.

USE: Three hour fire resistive opening protective assembly.

DESCRIPTION: The door is designed for single opening not exceeding 8'-0" wide by 7'-0" high and consists of a pair of hollow metal doors in a pressed steel frame.

The panels of both active and inactive leaves are constructed of 18 gauge steel and the top and bottom rail is of 16 gauge steel.

The door is insulated with two layers of ⅛ inch asbestos millboard separated with 1½ inch blocks of cellular asbestos.

The leaf is provided with three 4½ inch full mortise steel hinges secured to the door and frame with machine screws.

The active leaf has a single point latch of the mortise type having a latch throw of ¾ inch. The inactive door had top and bottom bolts of the flush type with a throw of ¾ inch.

The applicant also requested approval of a door designated as a ¾ hour fire resistive opening protective assembly which is constructed of 18 gauge metal insulated with Johns Manville Asbestos cell and having a glass light of 35 inches by 35 inches.

The complete description of the doors are contained in the Underwriters' Laboratory report, Retardant 3331-3 and 3331-4, and these reports are on file with and are part of the record.

INSPECTION AND TEST: The doors were tested at the Underwriters' Laboratory, Chicago, Illinois with the following results and successfully met the requirements of C26-610.0

The door with the glass panel was only tested structurally and no heat transmission was recorded.

RECOMMENDATION: On the basis of the tests and the data filed by the applicant, the Committee on Test recommends the approval of the Amweld 1¾ Fire Door when constructed as herein described with two layers of ⅛ inch asbestos millboard and 1½ inch of aircell asbestos as a three hour fire resistive opening protective assembly and that the door may have glass light as permitted under the pertinent sections of the Administrative Building Code and further that all doors recommended for approval under this resolution shall comply with the requirements of the Rules of the Board for Inspection of Opening Protective Assemblies

and that all inspections of doors for this manufacturer shall be in accordance with such rules.

USE: To provide a Flexible Connection between the Gas inlet supply and appliance.

DESCRIPTION: The connector is made of seamless corrugated 53/64" x .016 yellow brass tubing. The tubing is sized to accept 5/8" x 1/2" x .036 copper insert flared to form flared seat which is phoscopper soldered (.0156 cubic inches solder per joint) to tubing. The 3/4" female I.P.S. x 5/8" O.D. tube flare fitting—steel brass plated is assembled to soldered unit. The 3/4" x 14 external thread male I.P.S. x 5/8" O.D. tube flare fitting steel brass plated is inserted in the female fitting and made flush with the flared seat of the copper insert. The head of the male portion has 3/4" NPT—female thread. This flexible tubing with ends fitted as above will be furnished in lengths from 18" to 60" in 6" increments.

INSPECTION AND TEST: Samples of the connector were inspected by Ass't. Architect T. W. Farricker. The device has been tested and approved by the American Gas Association under Certificate No. N-141-1.031.

RECOMMENDATION: The Committee on Test recommends the approval of the material known as "Jamaco" Brass Gas Range Connector for voluntary use in New York City when fabricated of material as herein described and installed in accordance with the requirements of Article 12, Chapter 26, Administrative Building Code on condition that each appliance be stamped as follows: "Approved by the Board of Standards and Appeals for use in New York City under Calendar Number 515-58-SM."

THE RESOLUTION—

WHEREAS, the report of a Committee on Test reads: 41-59-SA—Wheelock Signals Inc., for Commercial Radio-Sound Corp., New York, filed December 31, 1958 for approval of their Fire Line Telephone System and Strap Key for use in New York City under the provisions of C26-1429.0 Administrative Code and the Standpipe Rules of the Board.

USE: A fire line telephone system and a push button signal station.

DESCRIPTION: The telephone system is designed to allow two-way conversation between the master station and any submaster station or between submaster stations or between any outlying telephone station and the master or any submaster station.

The system consists of a surface mounted master station, one or more wall mounted sub-master stations and any required number of wall mounted outlying telephone stations with vibrating type signalling bells installed at the master and sub-master stations. The master station also has a horn speaker mounted on top of the cabinet. This is finished in a Fire Department red. Power for the telephone and bell system is supplied at 24 volts from storage batteries connected with a battery recharger.

The strap keys installed in conjunction with the telephone system, are normally closed push button signal switches used in case of telephone failure. They are rated at 15 amps. 125 volts A.C. The push button is accessible only after unlocking the hinged cast iron door on the enclosing box with a N.Y.F.D. #1620 or #2 key.

INSPECTION AND TEST: This equipment was inspected at the Commercial Radio-Sound Corp., 652 1st Avenue, New York City, by Assistant Engr. G. F. Sklenarik and Elect. Insp. Richard Lent, N.Y.F.D. Certain changes were suggested which subsequently were incorporated into the equipment as stated in the report submitted by Elec. Insp. W. Mangin, N.Y.F.D. which is part of the record.

RECOMMENDATION: The Committee on Test recommends the approval of the Commercial Radio-Sound Corp., Fire Line Telephone System and Strap Key for use in New York City when installed in accordance with this report and the provisions of C26-1429.0 Administrative Code and the Standpipe Rules of the Board, provided that the telephone equipment and each strap key box bear a label, permanently affixed, reading "Approved by the Board of Standards and Appeals for use in New York City under Calendar Number 41-59-SA."

APPLICANT—James A. Phillips, Incorporated, owner Phillips Anchor Bar Insert and Self-Locking Hanger.

APPEARANCES—

For Applicant: Robert W. Phillips.

ACTION OF BOARD—Material approved in accordance with the report and recommendation of Committee on Test.

THE VOTE—

Affirmative: Chairman Foley, Commissioner Sleeper, Commissioner Fox and Commissioner Becker 4
Negative: Vice Chairman Kleinert 1

THE RESOLUTION—

WHEREAS, the report of a Committee on Test reads: 114-59-SM—James A. Phillips, Inc., New York, filed February 26, 1959 an application for approval of the Phillips Anchor Bar Insert and Self Locking Hanger for use in New York City under the provisions of C26-461.0 Administrative Building Code.

USE: Insert and hanger for suspending ceilings, etc.

DESCRIPTION: The system consists of bar and self locking hanger. The bar is basically the same as approved for the Famco System, approved by the Board under Calendar Number 79-53-SM except that the weight of the bar has been increased with the addition of a concrete dam cap of 0.01" in thickness. The self locking hanger is made of 16 gauge galvanized steel, 1 7/8 inches wide and the length depends on the suspension depth required. This hanger has a pyramid shaped wedge punched on each side of the strip and extends .01" off the sides of the hanger.

In installation the bar is attached to the concrete forms, with the opening face down, the concrete slab is poured, imbedding the bar but leaving the continuous opening of the bar exposed, the hanger is then driven into the bar insert and the wedges on the hanger hold the hanger in place.

INSPECTION AND TEST: A load test was conducted at Manhattan College on an insert and hanger cast in 1:2:5 cinder concrete with a 1" x 1/3" bar bolted to the hanger by means of a 1/4" bolt. The bolt sheared at 1,200 lbs. and there was no distortion of the bar or hanger. The complete report is on file with and is part of the record.

RECOMMENDATION: The Committee on Test recommends the approval of the Phillips Anchor Bar Insert and Self Locking Hanger as a hanger under the provisions of C26-461.0 Administrative Building Code, on condition that the system shall be used in conjunction with structural concrete made of aggregates approved by the Board but not to be used in cinder concrete and when used in conjunction with suspended ceilings the inserts shall be spaced not more than 5'-0" on centers and the hanger shall not be spaced more than 5'-0" on centers along the hanger and when used as a hanging system for conduits, sprinkler system, ducts, etc. that the maximum load on one hanger shall not exceed 125 lbs. and that all cartons in which the material is marketed shall be tagged, stamped or labeled "Approved by the Board of Standards and Appeals for use in New York City under Calendar Number 114-59-SM."

THE RESOLUTION—

WHEREAS, the report of a Committee on Test reads:
201-59-SA—The Heil-Quaker Corp., Nashville, Tenn., filed March 30, 1959, for approval of Quaker Vented Gas-fired Wall Heater, WCVA-256, WCVA-258, WCVA-406-B and WCVA-408-B Heil Direct Vent Gas-fired Recess Wall Heater WG-30, Quaker WDV-306, 308 A or B, Homart (Sears, Roebuck & Co.) 867.60462, 867.60463, 867.60466 and 867.60467, Quaker Direct Vent Gas-fired Wall Heater DV-206, DV-208, DVS-206 and DVS-208 for use in New York City under the provisions of Article 12 of the Administrative Building Code.

USE: Room heaters. Not to be used in garages or places of explosive atmosphere.

DESCRIPTION: The Quaker Vented Gas-fired Wall Heaters, Models WCVA-256, WCVA-258, WCVA-406-B and WCVA-408-B designed so that it can be attached to a wall. The casing is 22 gauge steel with #14 gold silicone, 22 gauge steel mesh screen. The combustion chamber is 20 gauge steel electrically welded, and finished in ground coat porcelain enamel. The burner is cast iron with raised drilled ports. There is an automatic pilot, together with a 100% safety shut-off valve (shuts off both the pilot and the main burner gas if the pilot should become extinguished).

The WCVA-256 for LP gas, 25,000 BTU/hr. input.

The WCVA-258 for natural, mixed or mfd. gases, 25,000 BTU/hr. input.

The WCVA-406-B for LP gas, 40,000 BTU/hr. input. Equipped with thermostatically control air circulating fan.

The WCVA-408-B for natural, mixed or mfd. gases—40,000 BTU/hr. input. Equipped with thermostatically controlled air circulating fan.

The Heil Direct Vent Gas-fired Recess Wall Heater, Models WG-30, 30,000 BTU/hr. input natural or LP gas. These are similar to the 867.60462 and 867.60463 Homart heaters and to the WDV-306-A and WDV-308-A Quaker Heaters. It differs from the Homart line in the style front and it differs only from the Quaker line in color and medallion. It is designed so that it can be attached to a wall. The outer casing is 20 gauge steel finished in tan enamel. The upper door is 22 gauge steel (8 louvers), front panel 22 gauge steel, lower door 22 gauge steel (18 louvers) casing back 22 gauge steel. Front heat baffle 24 gauge steel finished in Hi-Heat Aluminum. The burner is cast iron with raised ports having a 20 gauge steel, air shutter. The combustion chamber assembly is 20 gauge steel finished in porcelain enamel. The top body tube 3" 1D, 20 gauge steel finished in ground coat porcelain enamel. The bottom body tube 4 $\frac{1}{2}$ " 1D of 20 gauge steel finished in Hi-Heat Aluminum. The air duct, 20 gauge steel finished in Hi-Heat Aluminum. Direct vent for up to 12" walls or special length up to 20" walls. Heater can be recessed from 0" (hung on) up to 8 $\frac{1}{2}$ " in wall. The heater is equipped with a Torrington Fan, LU-8730-3 driven by a Redmond Motor AM-4218A or GE-1E99, suspended from $\frac{5}{32}$ " dia. wire bracket. Fan turns on and off automatically. Limit switches prevent over-heating of the unit. It has an easily changed thermo-couple and pilot burner orifice (from outside of combustion chamber); equipped with controls including M-H safety with T-88 Cadet wall-mounted thermostat, electric operator and transformer. Pressure regulator on natural gas models.

Quaker Models WDV-306-A and 308-B—Direct Vent Gas-fired Recessed Wall Heater, 30,000 BTU/hr. input. These heaters are similar to the 867.60462 and 867.60463 Homart Heaters and the Heil WG-30 heaters. The Models 306-B and 308-B are the same as the Quaker WDV-306-A and 308-A except the controls have been changed from Minneapolis-Honeywell to Robertshaw 110E. Several parts such as tubing, burner fitting, control support and transformer as changed to accommodate the new control.

TYPES OF GASES: WDV-306-A—L.P. Gases; WDV-

308-A—Natural or mixed gases. WDV-306-B—L.P. Gases; WDV-308-B—Natural or mixed gases. Sears (Homart) Direct Vent Gas-fired Recessed Wall Heaters, Models 867.60462 (not mixed) and 867.60463 (L.P.). These heaters are similar to the Quaker 306 and 308 A or B and Heil WG-30 heaters. The Models 867.60466 (not mixed) and 867.60467 L.P. gas are the same as the 867.60462 and 867.60463 except the controls are changed to the M-H "Junior" type. The transformer has been relocated and one junction box has been eliminated. The burner fitting and tubing are changed to accept control.

The Quaker Direct Vent Gas-fired Wall Heater, Models DV-206 and DV-208 are attached to any outside wall for individual room heating—air for combustion purposes are drawn from outside the building and returned outside, combustion chamber of 20 gauge steel is welded construction with A-19 Ceramic finish, all joints are tightly sealed. Heater has a removable casing of 20 gauge steel finished in Hammertone Blond Paint. The burner is cast iron, drilled with raised ports. With automatic pilot safety control and thermostat are standard equipment. Natural gas model is equipped with a pressure regulator.

Accessories: (A) T-1 Snap Action Thermostat or T-3 (wall type) Thermostats are available (B) GB-3 Fan Package.

Controls: Equipped with automatic pilot, M-H Adatrol Safety and M-H Modulating Thermostat. Snap action or M-H Wall Thermostats are available.

The Model DV-206—L.P. gas—20,000 BTU/hr. input. Approved when equipped with an optional blower; model DVS-206 also is approved and is the same as model DV-206 except it is equipped with the following controls.

Manual Main Control Valve

$\frac{3}{8}$ " Lincoln Brass No. 5114, or $\frac{3}{8}$ " Roberts Brass No. 7958A.

Automatic Pilot Valve

$\frac{1}{2}$ " Robertshaw, No. TS-11F.

The Model DV-208—natural, mfg. and mixed gases also approved when equipped with the following gas pressure regulators, in addition to the $\frac{1}{2}$ " Major No. 200; $\frac{1}{2}$ " Thermac Thod, $\frac{1}{2}$ " Thermac TH, $\frac{1}{2}$ " Major 250, approved when equipped with an optional blower also approved for use with the above gases and liquefied petroleum gases when a web is incorporated between the burner ports.

Model DVS-208 also is approved and is the same as model DV-208 except it is equipped with the following controls;

Manual Main Control Valve

$\frac{3}{8}$ " Lincoln Brass No. 5114 or $\frac{3}{8}$ " Roberts Brass No. 7958A.

Gas Pressure Regulator

$\frac{3}{8}$ " Thermac No. Thod.

THE RESOLUTION—

WHEREAS, the report of a Committee on Test reads:
524-59-SM—Kemp Corporation, Birmingham, Michigan,
filed August 10, 1959 for approval of Soundlock Acoustical
Panels A & B for use in New York City under the provi-
sions of C26-461.0 Administrative Building Code.

USE: Incombustible Acoustical Ceiling.

DESCRIPTION: Panels are composed of 30 gauge steel
perforated on the face and another sheet of 30 gauge un-
perforated steel forming the back. The panel is insulated
by means of flame resistant honeycomb core; the cells
of this honeycomb are filled with a fiberglass insulation.
The face and back steel plates are locked together by means
of a lock seam traveling the entire length of the panel. The
applicant has requested the Board to approve various means
of suspension of the system.

1. The panel may be suspended by means of the Beehive
anchor slot, Bee nut and the 1/4 inch suspension rod; pre-
viously approved by the Board under Calendar Number
369-57-SM. To this assembly is attached the KCR clip
which assembly was approved by the Board under Calendar
Number 50-56-SM. To this clip is attached, by a camming
action, a .050 T hanger to the shoulder of the panel by in-
serting a tab through the slot in the T and turning the tab
90°.

2. The panels are attached to a standard 1 1/2 inch channel
grid system by means of a wire clip hanger. The wire
hanger is inserted through holes which are punched into
the web of the panel.

3. The panel may rest on an approved exposed T grid
system.

INSPECTION AND TEST: The applicant has submitted
test reports conducted by Pittsburg Testing Laboratory
which showed that the tension pull out of the clips was an
average of 370 lbs. and a deflection test on an 8'-0" span
showed a deflection of .26 under a load of 1 lb. per sq. ft.

RECOMMENDATION: The Committee on Test recom-
mends the approval, for voluntary use in New York City,
of the Sound Lock Acoustical Panel A & B as an incom-
bustible acoustical panel, under the provisions of C26-461.0
Administrative Building Code, on the following condition:

System 1. The suspension system shall be spaced not
greater than 5'-0" on centers in both directions.

System 2. The 1 1/2 inch channels shall be spaced not
greater than 5'-0" on centers in both directions.

System 3. When used in conjunction with an approved
exposed T grid system, the grid system shall be installed
in accordance with the approval granted to such system
and further all plans submitted to the Department of Build-
ings showing the proposed use of this construction shall be

PREMISES AFFECTED—2228-2250 Linden Boulevard, south side, from Cleveland Street to Ashford Street, Block 4359, Lots 1 and 6, Borough of Brooklyn.

APPEARANCES—

For Applicant: Leonard F. Rothkrug.

For Opposition: None.

ACTION OF BOARD—Application granted on condition.

THE VOTE—

Affirmative: Chairman Foley, Vice Chairman Kleinert,
Commissioner Sleeper, Commissioner Fox and
Commissioner Becker 5
Negative: 0

THE RESOLUTION—

WHEREAS, this application was reopened as Vol. III on June 23, 1959 subject to regular procedure; and

WHEREAS, a public hearing was held on this application on September 29, 1959 after due notice by publication in the Bulletin; laid over to October 14, 1959, for inspection and decision; hearing closed; and

WHEREAS, the decision of the Borough Superintendent, dated June 8, 1959 acting on N.B. Applics. 1513-59 and 1514-59, reads:

"1. Proposed retail store and accessory parking in a residence use district is contrary to Art. II Sec. 3 of the Zoning Resolution.

2. In a D-D area district the proposed building occupies more than the area permitted by Art. IV Sec. 14B subdiv. (c) of the Zoning Resolution.

3. In a D-D area district the proposed building is not provided with setbacks from the building line required by Art. IV Sec. 14B subdiv. (d) of the Zoning Resolution."

and

WHEREAS, the premises and surrounding area were inspected by a committee of the Board; and

WHEREAS, the Board found that this was an appropriate case in which to exercise discretion to grant under Section 7, Subdivision e of the Zoning Resolution, as to use, and that the applicant had substantiated a basis to warrant exercise of discretion to grant under Section 21, and is therefore entitled to relief, as to area, on the grounds of practical difficulty and unnecessary hardship.

Resolved, that the Board of Standards and Appeals does hereby make a variation in the application of the use and area district regulation of the Zoning Resolution and that the application be and it hereby is granted under Sections 7e and 21, to permit in a residence use, DD area district, the erection and maintenance of three retail stores with accessory customer and employee parking, with the building occupying more than the permitted area and without the required setback, for a term of twenty-one years, on condition that the work shall be done in accordance with drawings filed with this application dated June 9, 1959, 5 sheets; that all laws, rules and regulations applicable shall be complied with; and that all permits, including a certificate of occupancy shall be obtained and all work completed within the requirements of Section 22A of the Zoning Resolution.

* Correction. In the resolution, the term of variance corrected to read "twenty-one" years instead of "ten" years.

PUBLIC HEARING

Cal. No. 353-30-SR

NOTICE IS HEREBY GIVEN that a public hearing will be held by the Board of Standards and Appeals Friday, November 20, 1959 at 10 A.M. in Room 909, at 80 Lafayette Street, Manhattan, on the following proposed amendments to the Rules governing the use of equipment for Spraying and Drying of Paints, Varnishes, Lacquers and other inflammable surface Coatings and Storage of such Materials. New Matter in Italics, Matter to be deleted in Brackets.

4. Specification for Spray Booths, Spray Rooms, Dip and Immersing Rooms, Drying Equipment and Material Storage Rooms.

4.1.1 Spray, dip and immersing rooms shall be enclosed on all sides with partitions constructed of incombustible materials with floors in such rooms of concrete. Where such rooms are located over wooden floors, such wooden floors shall be surfaced with 1" of grout adequately reinforced or a mixture of Portland cement, asphalt and sand similarly reinforced. Ceilings over such rooms shall be protected by $\frac{5}{8}$ " unsanded gypsum plaster or $\frac{7}{8}$ " of cement or sanded gypsum plaster on approved 3.0 lb. metal lath or other equivalent fire resisting ceiling protection. Ventilation, lighting and heating for these rooms shall comply with the requirements of these rules. Where additional fire fighting equipment is necessary such equipment shall be furnished in accordance with the direction of the Fire Commissioner. Floor drains leading to the house draining system or the public sewer shall not be permitted. [All] Dip tanks shall be provided with hinged metal covers held open by a fusible link, such covers to be equipped with an opening to permit automatic flooding of the tank with fire extinguishing media of a type and so located as the Fire Commissioner shall direct. *Where the work process, such as conveyerized operation, makes the use of a cover impractical, the dip tank and drain boards shall be protected by an adequate extinguishing system designed for manual and automatic operation and satisfactory to the Fire Commissioner.*

4.3 Drying Equipment.

4.3.1 Gas Fired Drying Ovens. Gas fired drying ovens shall be of a type as approved by the Board. Such ovens shall be constructed of metal and incombustible materials so designed as to preclude the direct application of flame to the materials in process. [The exhausts from both the heating compartments and the drying compartment shall be individually equipped with adequate fans and exhaust piping connected directly to the outer air]. *Ventilation shall be provided for each oven of sufficient capacity to maintain an oven vapor concentration at all times during the drying process of less than $\frac{1}{4}$ the low explosive limit of the solvent used. All oven openings shall be maintained at a negative pressure to maintain inward flow. The controls for the safety exhaust and recirculating fans shall be [so] properly interlocked with the gas supply line so that when the gas is flowing the fans are in operation. A time delay relay shall be installed to provide a minimum of four oven volume changes with fresh air and in the case of an indirect fired type of oven simultaneous purging of the combustion chamber before the ignition system may be operated.*

[An extra switch shall be provided to permit the operation of the fans when the gas supply is off]. Each oven shall be equipped with approved gas burning equipment with electrical controls so arranged as to shut off the gas valve when ignition fails or the gas supply pressure drops to 2 inches of water.

The use of a continuous gas pilot light is prohibited unless an automatic gas shut off valve is provided which will shut the gas off at the pilot light when the flame is extinguished or the supply of gas cut off. Electrical pilot ignition shall be of the continuous type or equal in performance, designed for use in high temperatures, with controls so interlocked as to shut off the gas supply when current is interrupted. An auxiliary manually operated gas shut off valve shall be located not nearer than 25 feet from the oven so as to control the gas supply in the event of an emergency. Such ovens shall be adequately insulated on all sides, including the base, which shall have the equivalent of a double thickness of such insulation unless the floor is protected by a 3 inch mat of reinforced concrete placed over and bonded into the existing concrete floor and projecting not less than 6 inches outside the projected area of the equipment or unless an unenclosed clear air space not less than 4 inches above the floor is maintained between the floor and the underside of the oven.

4.3.1.1 *The burner section of gas fired drying ovens shall not be located nearer than 25 feet from spraying or dipping spaces. [Unless such oven is approved for use in explosive atmospheres].*

4.3.2 Electric Infra-red Ray Drying Ovens.

4.3.2.1.1 In drying processed material involving the evaporation of considerable amounts of flammable solvents by infra-red lamps, such installations shall not be confined in small rooms unless such rooms are thoroughly ventilated by a power driven ventilation system of sufficient capacity to provide 100 linear feet of air per minute *over the entire surface of the processed material*: the controls of the ventilation system to be so interlocked with the Infra-Red Ray System that the latter cannot function unless the ventilating system is in operation. When equipped with duct ventilating system, the Infra-Red Ray Oven shall be adequately secured so as to prevent moving.

4.3.2.1.4 *Lamp and resistance heater type drying units shall be separated from spraying and dipping processes complying with these rules by a distance of at least 15 feet or shall be installed in a separate fireproof room.*

4.3.2.1.6 Where there are no conveyors and the material being processed is left stationary in the dryer there shall be an excessive temperature switch to shut off the lamps *or resistance heaters* to avoid overheating the material being processed if it is not removed from the dryer in time.

4.3.3 [The use of these processes shall be limited to metal or other incombustible material requiring paint processing]. *The temperature of the air contacting the processed material shall not be higher than that to which such material can be safely subjected, but not over 350°.*

RULES

Fire Drill Rules, Adopted by the Board of Standards and Appeals, October 5, 1923

(593-23-SR)

DEFINITION OF "FIRE DRILL"

The method and practice of the systematic and orderly vacating of a building by its occupants in case of emergency, panic or fire in the least possible time—by the nearest safe means of exit—and the use of fire appliances which shall be provided for the extinguishing or retarding of fire and the safeguarding of human life.

Rule 1.

In all buildings as defined in Article 1, Section 10 of the Labor Law in which fire drills are required pursuant to Section 279 thereof and in any other building in which such drills are required by the Fire Commissioner pursuant to the power conferred in section 491 of the New York City Charter, it shall be the duty of the owners, lessees or tenants to conduct fire drills monthly and at such other times as the Fire Commissioner may direct.

For the purpose of conducting such fire drills the owner or tenants shall appoint from among their employees such responsible and dependable persons, male or female, who shall efficiently perform the duties of the various positions of the fire drill organization, as specified on the accompanying chart.

It shall be the duty of the owner or tenant to enter in the blank spaces provided for that purpose in said chart the names of persons so selected and post said chart and copies of the rules in a conspicuous place.

Rule 2. Duties of Foreman.

The Foreman or Person in Charge shall direct, enforce and have full charge of the "Fire Drill" in every factory on each floor. Each day before work is begun he shall see that extinguishers, fire hose, fire buckets, etc., are in readiness for use, exit doors are unlocked, aisles are free from obstruction, that stairways, halls, etc., are properly lighted, and shall remedy any dangerous condition found to exist. Immediately after work is commenced he shall check up the Fire Drill Organization list and note if the regularly assigned persons are present; if any are found to be absent, he shall assign other employees (if practicable) to perform their duties.

He shall immediately notify new employees of the existence of the Fire Drill Organization and give them the necessary instructions as to the duties they are to perform, etc.

He shall be familiar with the operation and location of the interior alarm signal box on his floor.

He shall listen for the test signal each morning at the appointed hour and in the event of the test signal not being heard he shall communicate with the superintendent or other person in charge of the building and advise him of the fact. The (Floor Captain's) Foreman's orders are final as to the carrying out of the fire drill on his particular floor.

Rule 3. Duties of Watchmen.

The WATCHMEN shall see that all doors and windows are closed so as to prevent the spread of fire. The WATCHMEN shall be the only persons permitted to remain on the floor during the progress of a fire drill and do so at their own risk. For ordinary purposes only one watchman and a substitute shall be designated. In special cases, however, extra watchmen may be assigned by consent in writing from Fire Commissioner.

RULES

Duties of Searchers.

MALE AND FEMALE SEARCHERS shall search closets, dressing rooms and emergency rooms used and occupied by their sex and all other portions of the floor for all persons, except those authorized to remain, to leave the premises. They are to take care of and assist persons who may faint or be disabled.

SEARCHERS shall leave the floor immediately after the last squad leaves.

Rule 5. Duties of Street Alarm Box Runner.

The STREET-ALARM-BOX-RUNNER shall be familiar with the location of the nearest city fire alarm box and know how it is operated.

In ordinary practice fire drills the STREET-ALARM-BOX-RUNNER shall report to the Foreman for orders, and if his services are not required he shall promptly file out of the premises with the other occupants.

Only when a fire actually occurs on his floor, or when ordered to do so by the Foreman, shall the STREET-ALARM-BOX-RUNNER proceed to the street alarm box and send in the fire alarm.

Rule 6. Duties of Fire Brigade.

The fire brigade shall have full charge of the operation of all auxiliary fire fighting apparatus and shall endeavor to extinguish, or at least hold in check until the arrival of the Fire Department, any fire that may occur. When it is necessary for the fire brigade to respond to different floors in the building they shall not use the stairways or fire escapes while the occupants are escaping from the premises.

Rule 7. Duties of Exit Guards.

The EXIT GUARDS shall station themselves at all exit doors leading to fire escapes, stairways, and other means of escape immediately upon the sounding of the alarm. There shall be two guards for each exit, if practicable; one to stand in the hallway holding back the door and the other directly inside on the floor. They are to keep the exit doors open and direct the movements of the persons using these exits and prevent congestion.

EXIT GUARDS shall remain at their stations until all of the occupants of the building have passed their station. Then close their doors and pass out of the building. Upon signal for the occupants to return, EXIT GUARDS shall take their designated stations and remain there until all persons have returned to their respective floors.

Rule 8. Duties of Squad Monitors.

The SQUAD MONITORS, as soon as the alarm is sounded, shall see that the employees under their charge quickly form into line, two abreast, and numbering not more than thirty to each squad. They shall see that all aisles and passageways are cleared of obstructions.

Note: Chairs, stools, baskets, etc., should be pushed under or placed on top of work benches.

MONITORS shall proceed at the head of their respective squads to the exit assigned, and then march up or down the stairs or to other exits as directed by the EXIT GUARDS.

On reaching the sidewalk MONITORS shall keep their squads in order and lead them a reasonable distance from the building, so as not to cause congestion and interference with fire apparatus. When the proper signal is given they shall return to their respective floors at head of their squads.

MONITORS will at all times see that those under their charge conduct themselves in a respectable and orderly manner.

Rule 9. Holding of Drills.

FIRE DRILLS shall be held at least once each month at varied hours of the day, and all of the occupants shall participate therein simultaneously. Such drills shall conduct all occupants to a place of safety.

Where dual operation interior fire alarm systems are installed as permitted under Rule 11 of the interior fire alarm rules of the Board of Standards and Appeals, the fire drill conducted each month shall include all of the persons on the premises engaged at work for a factory, and drills shall be conducted at least twice, each year in which all of the persons on the premises shall participate simultaneously.

Rule 10. Duties of Owner.

It shall be the duty of the OWNER, LESSEE OR TENANT OF THE BUILDING or his authorized agent or their representatives to personally observe that the "Fire Drill" is held simultaneously on every floor of the building and the participation therein of every occupant of such building. Any FIRE DRILL in which all of the occupants do not participate shall not be considered as complying with the LAW, except as otherwise provided in these rules.

The person or persons representing the OWNERS, LESSEE OR TENANT, who supervises the FIRE DRILL at the building shall submit to an examination by the Division of Fire Prevention as to their experience and general fitness for such duties, and shall be so certified in writing by the FIRE COMMISSIONER.

It shall be the duty of the ENGINEER, SUPERINTENDENT or other PERSON IN CHARGE of a building having an interior fire alarm system to test such system daily immediately after the beginning of business, and to see that all apparatus operated by springs, requiring winding are rewound after each alarm and kept in normal condition for operation.

Rule 11. Duties of Engineer.

Whenever it is necessary to test the fire alarm system at any other time of the day, owing to repairs, etc., being made, the PERSON IN CHARGE OF BUILDING will first notify all Foremen of the several floors of the intended test and likewise notify them when the repairs, etc. are completed. This precaution is taken to prevent confusion and excitement, also misunderstanding of the alarm signals.

It shall also be the duty of the PERSON IN CHARGE OF BUILDING to sound the interior alarm system at irregular intervals, but not less than once each calendar month, for the purpose of holding practice fire drills. He shall keep on the premises a record of such drills, showing the date when held and the required time for all occupants to reach the street or a point of safety outside the building.

The PERSON IN CHARGE OF BUILDING must immediately acquaint new tenants of the existence of the "Fire Drill" Organization and its purport.

Rule 12. Registration.

The name and address of every person, corporation or co-partnership, that will, under professional service, carry on the trade, business or calling of establishing, maintaining or supervising the "Fire Drill" shall be registered in the Fire Department, which Department shall, upon evidence of fitness, grant a certificate to that effect.

RULES

RULES RELATING TO SMOKING IN PROTECTED PORTIONS OF FACTORIES, AND IN SPECIAL CLASSES OF OCCUPANCIES.

Adopted by the Board of Standards and Appeals August 13, 1918, effective September 9, 1918, under the powers conferred upon the Board by Section 718-a, Subsections 2 and 3 (Old Charter) to supplement Section 283 of the Labor Law (Old Section 83c).

[Cal. 1262-18-SR]

Labor Law

Section 283. Smoking.

1. No person shall smoke in a factory. A notice of such prohibition stating the penalty for violation thereof shall be kept posted in every entrance hall, elevator, stair hall and room of a factory in English, and in such other languages as the fire commissioner of the city of New York in such city and elsewhere the commissioner shall direct.

2. The board in its rules may permit smoking in protected portions of a factory, or in such classes of occupancies where in its opinion the safety of the employees will not be endangered thereby. The fire commissioner of the city of New York in such city and elsewhere the commissioner may issue such permits in accordance with rules adopted by the board.

3. The fire commissioner of the city of New York in such city and elsewhere the commissioner shall enforce this section.

RULE 1. Permit.

(a) **Prohibition.** No person shall smoke, or carry a lighted cigar or cigarette in any factory as defined in Article 1, Section 2, of the State Labor Law, nor in any portion of a factory, within the City of New York, except in such protected portions or special classes of occupancies as are specified in Rule 2 of these rules, and then only after the issuance of a permit by the administrative official.

It shall be the joint and several duty of the owner and of the lessee or lessees of the building containing such factory or factories to cause to be posted in each and every entrance hall, stair hall or room throughout the building, as well as in every elevator car, in English, and also in such other language or languages—as the administrative official shall direct, a notice of such prohibition, and the penalty for its violation.

(b) **Application.** Application for such permit shall be made only by the owner of the building on suitable blank forms to be furnished by the administrative official.

(c) **Time Limit.** Such permit shall be for a definite period, not exceeding one year, and shall not be renewed upon the expiration until a reinspection of the premises for which it is issued has been made for the purpose of determining whether existing conditions warrant a renewal.

(d) **Conditions.** The permit shall state the conditions under which the hours between which, and the place or places in such factory where smoking may be permitted, and this

permit shall be framed and kept posted in a conspicuous place in the factory.

(e) **Revocation.** Violation of any of the conditions specified in the permit in addition to incurring such penalties as are prescribed by law, shall be full and sufficient cause for the revocation of such permit by the administrative official, and shall not again issue a permit for the same premises until at least one year has elapsed.

Rule 2. Permissible Cases.

Smoking may be permitted in:

(a) Factories engaged in the manufacture of cigars, cigarettes, or smoking tobacco, when necessary for the efficient conduct of the business, provided that:

(1) No smoking other than that for sampling, testing and experimental purposes is carried on.

(2) Such smoking is conducted in a room provided especially for that purpose, separated from the rest of the building by fireproof or fire-resisting partitions, with all openings therein protected by self-closing fire doors, and further, unless the building is of fireproof construction or provided with an approved automatic sprinkler system, the floor and ceiling of such room shall be covered with fire-retarding material.

(3) Such chemical fire extinguishers as the administrative official may direct are installed.

(4) All waste paper and other inflammable waste materials are deposited in fireproof receptacles.

(b) Factories devoted entirely to one of the following occupancies:

Blacksmithing or horseshoeing;
Boiler making;
Brick, terra cotta or artificial stone works;
Forge shops;
Foundries;
Iron, steel, brass or copper works;
Machine shops;
Smelting;
Stone or monumental works;

provided that in any case:

(1) The building is not of wooden construction;

(2) Such chemical fire extinguishers as the administrative official may direct are installed;

(3) All waste paper and other inflammable waste materials are deposited in fireproof receptacles.

COURT DECISIONS

Matter of Raia vs. Murdock:—On July 25, 1957, the Board granted a variance under Section 7, subdivisions f and e of the Zoning Resolution, for a term of five years, to permit a gasoline service station; Calendar Number 85-56-BZ; Premises 1041-1065 (1055 official) Hylan Boulevard, and 653-665 Steuben Street, northeast corner, Edgewater, Borough of Richmond.

At Special Term, Supreme Court, Mr. Justice Costantino remitted the case to the Board in the following decision, printed in the New York Law Journal, October 22, 1959, page 13:

"1. Petitioners' application to annul the determination of respondent Board of Standards and Appeals is granted, with a direction that the matter be remitted to the respondent to make proper findings of fact. The claimed findings of fact are, in the court's opinion, inadequate compliance with the requirements of law. 2. Respondents' cross-motion to dismiss the petition is denied. 3. Petitioners' additional motion with respect to respondents' return is not passed upon, since, under the court's decision, such questions are now academic. Settle order on notice."

* * * * *

Matter of Platt vs. Harris H. Murdock:—On January 28, 1958, the Board granted a variance under Section 21 of the Zoning Resolution, to permit in a G-1 area district, the conversion of a present one-family to a two-family dwelling; Calendar Numbers 329-57-BZ and 281-53-A; Premises 1161 East 21st Street, east side, 240 feet south of Avenue J, Block 7603, Lot 33, Borough of Brooklyn.

At Supreme Court, Kings County, Mr. Justice Feiden sustained the Board in an opinion printed in the N. Y. Law Journal of October 19, 1959, stating in part as follows:

"It is therefore the finding of this court that the decision of the Board of Standards and Appeals, which granted permission to continue to maintain the two-family dwelling occupancy which had been established prior to the time when such occupancy became prohibited for buildings thereafter erected or altered, must be sustained in order that substantial justice may be done. This decision is made on two separate and independent grounds that (1) the owner is entitled to such permission as a matter of law and right (on condition that the requirements of the administrative code, as modified by the board under calendar No. 281-53-A are met) and (2) the record and return of the Board contain sufficient facts and findings to show that there are practical difficulties and unnecessary hardships in the way of carrying out the provisions of the zoning resolution, that the variance is in harmony with the general purpose and intent of the zoning resolution, that the public health, safety and general welfare are secured by such determination (which also requires, among other conditions, compliance with the requirements of the Administrative Code, as modified by the board under calendar No. 281-53-A) and that substantial justice is done thereby. In either event, it is the view of this court that the condition contained in calendar No. 281-53-A, limiting the attic floor occupancy to occupancy by the "separate family related to the owner" has been properly superseded by the condition contained in calendar No. 329-57-BZ permitting the premises "to be continued as a two-family dwelling." Accordingly, the petition is dismissed. Submit order."

PUBLIC HEARINGS

November 29, 1949 and amended through December 22, 1953 under Calendar Number 692-49-SA—Vols. I & II be reopened and amended so as to include an additional model of automatic clothes washing machine.

USE: Automatic clothes washing machine—9 lbs.

DESCRIPTION: The requested Model CL-12 No. W580-4410 is similar to the models previously approved by the Board under the above Calendar Number; the difference being in that the timer mechanism is tied into the coin meter for self operated laundrettes and a change in cabinet styling.

RECOMMENDATION: The Committee on Test recommends that the resolution adopted November 29, 1949 under Calendar Number 692-49-SA, Vol. I be reopened and amended so as to include the CL-12 No. W5804410 automatic clothes washing machine, on condition that the requirement of the resolution adopted November 29, 1949 under Calendar Number 692-49-SA are complied with.

APPLICANT—National Gypsum Company, owner—amendment, additional forms of construction.

APPEARANCES—

For Applicant: Donald K. Busch.

ACTION OF BOARD—Application reopened and resolution amended in accordance with the report and recommendation of Committee on Test.

THE VOTE—

Affirmative: Chairman Foley, Commissioner Sleeper, and Commissioner Becker 3

Negative: Commissioner Fox 1

Not Voting: Vice Chairman Kleinert 1

THE RESOLUTION—

53-59-SM—Amendment to resolution as to additional forms of construction.

National Gypsum Co., Buffalo, New York requested by letter that the resolution adopted September 15, 1959 be reopened and amended so as to include additional forms of construction.

USE: Mill mixed gypsum plaster for spray application direct to steel beams and steel floors.

DESCRIPTION: The material is the same as that approved September 15, 1959 under Calendar Number 53-59-SM and applied in the same manner to the construction which it is to protect.

INSPECTION AND TEST: Two floor-ceiling fire resistive tests were conducted at the Underwriters' Laboratory in accordance with the requirements of C26-588.0 through C26-590 and C26-593.0 through C26-599.0 Administrative Building Code.

The first test was on a construction similar to that previously approved except that the thickness of the plaster on the underside of the steel floor was reduced from $\frac{5}{8}$ " to $\frac{3}{8}$ " and the steel beam in the assembly was not caged, but the plaster was applied directly to the beam, following its contour, to a thickness of 2" at the web and flanges. The construction successfully met the requirements of a three hour fire resistive floor and/or ceiling construction.

The second test was conducted on corrugated steel floor units (approved for Granco Steel Products Co.). The construction was as follows:

The steel floor units were placed on the beam supports and spot welded at their ends to the beams, with welding washers at every fourth corrugation and joint. The negative reinforcing is then placed on and tied to continuous 2"

high chairs. Header ducts are then placed on top of and at right angles to the form units. The opening between the header ducts and the form unit is 3" in diameter and located below each junction box. A concrete floor to a depth of $\frac{1}{2}$ " measured from the valley of the corrugations of the form units is then poured.

The spray plaster is then applied to the underside and conforms to the contour of the steel deck and also directly to the steel beam. The thickness of plaster on the beam is $2\frac{1}{2}$ " measured from the web and flanges. On the ceiling, the plaster is applied to a thickness of $\frac{3}{4}$ " except under the junction boxes where the plaster is applied to a thickness of $2\frac{1}{8}$ ". This construction successfully met the requirements of a four hour fire resistive floor and ceiling construction.

The Underwriters Reports Retardant 4197-4 & 4197-5 are on file with and are part of the record.

RECOMMENDATION: The Committee on Test recommends that the resolution adopted September 15, 1959 be reopened and amended so as to include the additional means of construction as herein described, on condition that the requirements of the resolution adopted September 15, 1959 under Calendar Number 53-59-SM be complied with.

PUBLIC HEARING

Cal. No. 353-30-SR

NOTICE IS HEREBY GIVEN that a public hearing will be held by the Board of Standards and Appeals Friday, November 20, 1959 at 10 A.M. in Room 909, at 80 Lafayette Street, Manhattan, on the following proposed amendments to the Rules governing the use of equipment for Spraying and Drying of Paints, Varnishes, Lacquers and other inflammable surface Coatings and Storage of such Materials. New Matter in Italics, Matter to be deleted in Brackets.

4. Specification for Spray Booths, Spray Rooms, Dip and Immersing Rooms, Drying Equipment and Material Storage Rooms.

4.1.1 Spray, dip and immersing rooms shall be enclosed on all sides with partitions constructed of incombustible materials with floors in such rooms of concrete. Where such rooms are located over wooden floors, such wooden floors shall be surfaced with 1" of grout adequately reinforced or a mixture of Portland cement, asphalt and sand similarly reinforced. Ceilings over such rooms shall be protected by $\frac{5}{8}$ " unsanded gypsum plaster or $\frac{7}{8}$ " of cement or sanded gypsum plaster on approved 3.0 lb. metal lath or other equivalent fire resisting ceiling protection. Ventilation, lighting and heating for these rooms shall comply with the requirements of these rules. Where additional fire fighting equipment is necessary such equipment shall be furnished in accordance with the direction of the Fire Commissioner. Floor drains leading to the house draining system or the public sewer shall not be permitted. [All] Dip tanks shall be provided with hinged metal covers held open by a fusible link, such covers to be equipped with an opening to permit automatic flooding of the tank with fire extinguishing media of a type and so located as the Fire Commissioner shall direct. *Where the work process, such as conveyerized operation, makes the use of a cover impractical, the dip tank and drain boards shall be protected by an adequate extinguishing system designed for manual and automatic operation and satisfactory to the Fire Commissioner.*

4.3 Drying Equipment.

4.3.1 Gas Fired Drying Ovens. Gas fired drying ovens shall be of a type as approved by the Board. Such ovens shall be constructed of metal and incombustible materials so designed as to preclude the direct application of flame to the materials in process. [The exhausts from both the heating compartments and the drying compartment shall be individually equipped with adequate fans and exhaust piping connected directly to the outer air]. *Ventilation shall be provided for each oven of sufficient capacity to maintain an oven vapor concentration at all times during the drying process of less than $\frac{1}{4}$ the low explosive limit of the solvent used. All oven openings shall be maintained at a negative pressure to maintain inward flow. The controls for the safety exhaust and recirculating fans shall be [so] properly interlocked with the gas supply line so that when the gas is flowing the fans are in operation. A time delay relay shall be installed to provide a minimum of four oven volume changes with fresh air and in the case of an indirect fired type of oven simultaneous purging of the combustion chamber before the ignition system may be operated.*

[An extra switch shall be provided to permit the operation of the fans when the gas supply is off]. Each oven shall be equipped with approved gas burning equipment with electrical controls so arranged as to shut off the gas valve when ignition fails or the gas supply pressure drops to 2 inches of water.

The use of a continuous gas pilot light is prohibited unless an automatic gas shut off valve is provided which will shut the gas off at the pilot light when the flame is extinguished or the supply of gas cut off. Electrical pilot ignition shall be of the continuous type or equal in performance, designed for use in high temperatures, with controls so interlocked as to shut off the gas supply when current is interrupted. An auxiliary manually operated gas shut off valve shall be located not nearer than 25 feet from the oven so as to control the gas supply in the event of an emergency. Such ovens shall be adequately insulated on all sides, including the base, which shall have the equivalent of a double thickness of such insulation unless the floor is protected by a 3 inch mat of reinforced concrete placed over and bonded into the existing concrete floor and projecting not less than 6 inches outside the projected area of the equipment or unless an unenclosed clear air space not less than 4 inches above the floor is maintained between the floor and the underside of the oven.

4.3.1.1 *The burner section of gas fired drying ovens shall not be located nearer than 25 feet from spraying or dipping spaces. [Unless such oven is approved for use in explosive atmospheres].*

4.3.2 Electric Infra-red Ray Drying Ovens.

4.3.2.1 In drying processed material involving the evaporation of considerable amounts of flammable solvents by infra-red lamps, such installations shall not be confined in small rooms unless such rooms are thoroughly ventilated by a power driven ventilation system of sufficient capacity to provide 100 linear feet of air per minute *over the entire surface of the processed material*: the controls of the ventilation system to be so interlocked with the Infra-Red Ray System that the latter cannot function unless the ventilating system is in operation. When equipped with duct ventilating system, the Infra-Red Ray Oven shall be adequately secured so as to prevent moving.

4.3.2.1.4 *Lamp and resistance heater type drying units shall be separated from spraying and dipping processes complying with these rules by a distance of at least 15 feet or shall be installed in a separate fireproof room.*

4.3.2.1.6 Where there are no conveyors and the material being processed is left stationary in the dryer there shall be an excessive temperature switch to shut off the lamps or resistance heaters to avoid overheating the material being processed if it is not removed from the dryer in time.

4.3.3 [The use of these processes shall be limited to metal or other incombustible material requiring paint processing]. *The temperature of the air contacting the processed material shall not be higher than that to which such material can be safely subjected, but not over 350°.*

THE RESOLUTION—

WHEREAS, a public hearing was held on this application on June 16, 1959 after due notice by publication in the Bulletin; then to June 23, 1959 at 10 A.M. for inspection and decision; hearing closed; and

WHEREAS, the decision of the Borough Superintendent, dated May 1, 1959 acting on Alt. Applic. No. 715-59, reads:

"1. Proposed extension 2'-0" into residence use district of a power plant is not permitted. Sec. 3 Zoning Res.

2. Proposed power plant extension exceeds height limits. Sec. 8 Zoning Res.

5. Proposed entrances on E. 75 St. & E. 74 St. exceeds the size permitted. Sec. 7A Zoning Res."

and

WHEREAS, the premises and surrounding area were inspected by a committee of the Board; and the committee recommended that the application should be granted on condition; and

WHEREAS, the Board found that this was an appropriate case in which to exercise discretion to grant under Section 7, Subdivisions a, b, c, 7A and 21 of the Zoning Resolution, as to use, and that the applicant had substantiated a basis to warrant exercise of discretion to grant under Section 21, and is therefore entitled to relief, as to height, on the grounds of practical difficulty and unnecessary hardship.

Resolved, that the Board of Standards and Appeals does hereby *make a variation* in the application of the use and height district regulation of the Zoning Resolution and that the application be and it hereby is *granted* under Sections 7a, b, c, 7A and 21 to permit in an unrestricted and residence use, B area, class 1½ height district, the erection and maintenance of an extension to the present electric power generating station extending into the residence portion of the plot, exceeding the permitted height and having loading entrances and business entrances exceeding three feet six inches in width within 75 feet of the residence use district, all as shown on drawings filed with this application marked "Received May 11, 1959", 13 sheets, *on condition* that the chimney of the adjoining six-story apartment house at the southeast corner of East 75th Street and York Avenue shall be carried above the parapet level of the adjacent power plant wall, in compliance with Section C26-570.0 and C26-711.b of the Administrative Code, provided that the owner of the said apartment house grants access for this purpose; that in all other respects the building and occupancy shall comply with all laws, rules and regulations applicable thereto.

* Correction—In the Resolution portion the last thirteen words that read as follows: *and that the building shall not be further extended beyond its present size* have been deleted.

THE RESOLUTION—

WHEREAS, the report of a Committee on Test reads:

1224-39-SM—Vol. II—Amendment to resolution as to additional vacuum breaker.

Sloan Valve Company, Chicago, Illinois, requested by filing an application, dated October 11, 1956, that the resolution adopted April 11, 1944 and amended through March 23, 1954, under Calendar Number 1224-39-SM Vols. I and II be amended so as to include the Models V-177-A and V-177-AC vacuum breakers. The application was reopened by a vote of the Board, October 30, 1956.

USE: The appliance is to be used to prevent back syphonage.

DESCRIPTION: The requested models are similar in design and operation to the Model V-100-A, approved by the Board March 23, 1954 under Calendar Number 1224-39-SM—Vol. I. There are these differences, however. The rubber used in the requested models is Ily-Car compound to withstand temperatures up to 250°F. The inside unit is threaded into the body of the vacuum breaker so that a cold water unit can not be installed when repairs are necessary.

The V-177-A is furnished with a fine thread at the inlet and with an inlet adapter and iron pipe outlet.

The V-177-AC is furnished with a coarse thread at the inlet. The suffix C denoting coarse thread.

MINUTES

INSPECTION AND TEST: Details of construction of the requested Models were compared with the details of construction of the model V-100-A, by Ass't. Engr. J. A. Darts, Committee on Test.

RECOMMENDATION: The Committee on Test recommends that the resolution adopted April 11, 1944 and amended through March 23, 1954 under Calendar Number 1224-39-SM—Vol. I be amended so as to include the Model's V-177-A and V-177-AC vacuum breakers, on condition that the requirements of the resolution adopted April 11, 1944 are complied with.

THE RESOLUTION—

WHEREAS, the report of a Committee on Test reads:
547-50-SM—Amendment to resolution as to additional floor-ceiling and beam constructions.

National Gypsum Company, Buffalo, New York, requested by letter dated October 11, 1956 that the resolution adopted February 5, 1952 be amended to include additional steel floor and beam construction in which Gold Bond Thermacoustic is the fire retardant under the provisions of C-26-88.0, C26-178.0 and C26-191.0, for use under the requirements of C26-239.0 Administrative Building Code.

USE: Gold Bond Thermacoustic is to be used as an acoustical and thermal insulation and also as a fire retardant on steel floors and beam construction.

DESCRIPTION: Gold Bond Thermacoustic (previously approved) is composed of asbestos fibers, mineral wool, a binder and preservatives and Gold Bond Thermacoustic Primer is a latex-resin emulsion adhesive.

INSPECTION AND TEST: The material was fire endurance tested at Underwriters' Laboratories, Chicago, in accordance with ASTM Designation E119-55 and the requirements of C26-579.0 through C26-590.0, C26-596.0 through C26-599.0 and C26-609.0 Administrative Building Code.

Two constructions were tested, one included steel floor units manufactured by Fenestra, Incorporated (Test A) and the other included steel floor units manufactured by H. H. Robertson, Incorporated (Test B).

Test A Construction:

Fenestra Electrifloor panels were placed on steel beams which form part of the furnace structure and on a 12WF27 steel beam placed within the furnace to provide spans for the floor panels of 3 feet 8½ inches and 9 feet 6 inches. The floor panels were covered with 2½ inches reinforced sand, gravel concrete. The floor units were designed to and did carry a live load of 85 pounds per square foot during the fire test.

The steel beam was encased with Gold Bond ¾ inches rib metal lath, 3.4 pound per square yard, which was at-

tached to ¾ inches C.R. channels (beam box loops) spaced 24 inches o.c. They were placed against the edges of the beam flanges and extended 2 inches below the face of the lower flange. 1½ inches Thermacoustic was applied to the metal lath; primer was not necessary.

The underside of the steel floor was thinly coated (one-half of floor sprayed, one-half brushed) with Gold Bond Thermacoustic Primer to which was applied 1½ inches Gold Bond Thermacoustic.

Fire Test A

The fire endurance test was terminated at 5 hours and 5 minutes although both the average unexposed temperature and the highest individual unexposed temperature of floor-ceiling were well below the maximum temperatures allowed under C26-590.0 and C26-609.0 Administrative Building Code. The steel beam reached an average temperature of 1000°F at approximately 214 minutes or 3½ hours under the provisions of C26-609.0 Administrative Building Code. No beam thermocouple had yet reached 1200°F at 4 hours.

Immediately after the fire endurance test, the construction was subjected to and successfully passed, a Hose-Stream test.

24 hours after the fire endurance test, the floor successfully withstood the application of an additional live load of 85 pounds per square foot, combined dead and double live load of 217 pounds per square foot, increase in deflection was 0.1 inch.

The complete test report is on file with and is part of the record.

Test B Construction:

H. H. Robertson cellular steel floor units were placed on steel beams which form part of the furnace structure and on a 12WF27 steel beam placed within the furnace to provide spans for the floor panels of 10 feet 5½ inches and 3 feet 9 inches. The floor panels were covered with 2½ inches reinforced sand, gravel concrete (3000 psi minimum compressive strength).

The steel beam was encased with Gold Bond ¾ inches rib metal lath, 3.4 pounds per square yard, which was attached directly to the beam flanges with Gold Bond Beam Furring (prev. 53-59-SM) Clips. The metal lath was placed against the beam flanges and extended 2 inches below the face of the lower flange.

The underside surface of the steel units was thinly coated with Gold Bond Thermacoustic Primer; the metal lath caging was not coated.

1 inch Thermacoustic was spray applied to the underside of the steel floor units. 2 inch Thermacoustic was spray applied to the metal lath beam caging.

Fire Test B:

The floor was loaded with a uniform live load of 87 pounds per square foot and the steel beam was subjected to an additional live load of 10,500 pounds thereby providing a stress of 20,300 psi. The maximum deflection, at the center of the large span, was 0.05.

The fire endurance test was terminated at 5 hours and 5 minutes although the average unexposed temperature and the highest individual unexposed temperature of the floor-ceiling were well below the maximum temperatures allowed under C26-590.0 and C26-609.0 Administrative Building Code.

The average temperature of the steel beam was less than 1000°F at 3 hours and no thermocouple had reached 1200°F at 3 hours-45 minutes. At the conclusion of the fire endurance test, the construction was subjected to and successfully passed a Hose-Stream test.

24 hours after the fire endurance test an additional live load of 87 pounds per square foot was applied to the floor and an additional live load of 10,500 pounds was applied to the beam. This represented a combined dead and double live load of 222 pounds per square foot on the floor-ceiling and a combined dead and double live load on the beam of

MINUTES

45,900 pounds. The increase in deflection of the beam was 0.33 inches.

The complete test report is on file with and is part of the record.

RECOMMENDATION: On the basis of the tests and the data filed by the applicant, the Committee on Test recommends the approval of Gold Bond Thermacoustic (previously approved) as a fire retardant for fire resistant floor-ceiling and beam constructions described below for use under C26-239.0 Administrative Building Code. The floor-ceiling constructions provide fire resistance in excess of 5 hours and the constructions for steel beam protection each provide fire resistance in excess of 3 hours as shown by the Underwriters' Laboratories test reports which are on file with and are part of the record.

FLOOR AND CEILING CONSTRUCTION: Fenestra, Incorporated steel floor units (previously approved) covered with 2½ inches reinforced sand, gravel concrete measured from the top plane of the floor units. Gold Bond Thermacoustic Primer applied, brush or spray, to undersurface of steel floor. 1½ inches Gold Bond Thermacoustic spray applied to undersurface, measured from the bottom plane of the floor units.

H. H. Robertson steel floor units (previously approved) covered with 2½ inches sand, gravel concrete (measured from top plane of floor units). Gold Bond Thermacoustic Primer applied (brush or spray) to undersurface of steel floor. 1 inch Gold Bond Thermacoustic spray applied to undersurface (measured from the bottom plane of floor units).

BEAM PROTECTION: A. Steel beam encased with Gold Bond ¾ inches rib metal lath, 3.4 pound per square yard, attached with 18 gage tie wire to ¾ inches C.R. channel box loops placed 24 inches o.c. along the beam, against the beam flanges and extending 2 inches below the lower flange. The box loops are welded to the upper flanges of the beam and are wire tied to two ¾ inch C.R. channels which extend the length of the beam below its lower flange. 1½ inches Gold Bond Thermacoustic is spray applied to the metal lath caging.

B. Steel beam encased with Gold Bond ¾ inches rib metal lath, 3.4 pounds per square yard, shaped in the form of a "U", with ribs perpendicular to the length of the beam, with the ribs resting against the flange edges of the beam and with the bottom of the "U" extending 2 inches below the lower flange. The metal lath is directly attached to the upper and lower beam flanges with Gold Bond Metal Beam Furring Clips spaced 6 inches o.c. 2 inches Gold Bond Thermacoustic is spray applied to the metal lath caging.

The Committee further recommends that the cartons or containers of Gold Bond Beam Furring Clips shall be marked or stamped as follows: "Approved by the Board of Standards and Appeals for use in New York City under Calendar Number 547-50-SM", and further that all requirements of the resolution adopted February 5, 1952 under Calendar Number 547-50-SM shall be complied with.

THE RESOLUTION—

WHEREAS, the report of a Committee on Test reads: 892-56-SA—Sears, Roebuck & Company, filed December 13, 1956 for approval of Kenmore 138.536020, 138.535035A, 138.537555T, 138.537570T, 138.556030A, 138.557545T, 138.557560T for use in New York City under the provisions of Article 12 of the Administrative Building Code.

USE: The appliance is a gas-fired space heater.
DESCRIPTION: The heater consists of two series: Kenmore Semiradiant Vented Gas Heater, Series 535 and Kenmore Cool Cabinet Radiant Vented Gas Heater, Series 556.

The 535 Series provides input of 20,000 BTU, 35,000 BTU, 55,000 BTU and 70,000 BTU. The 556 Series provides inputs of 30,000 BTU, 45,000 BTU and 60,000 BTU.

Both Series use the same basic cabinet design, the cabinet being fabricated of 20 gauge sheet steel. Front grilles are of 20 gauge expanded metal, and the 535 Series has a

MINUTES

louvered top. The cabinet finish is baked enamel, pigskin and a light tan in color.

The combustion chamber and heat exchanger are of 20 gauge steel and are coated with Type A-19 Ceramic, with a built-in draft diverter. It has a universal burner, 26 slotted ports, cast iron. The controls access door is located on the right side panel as you face the heater front.

Standard control is the Minneapolis-Honeywell V5153 Adatrol, with the exception of the 138.535020, 138.535035, and 138.556030 heaters. These are manual control, equipped with L.P. Gas Orifices installed and Natural Gas and Manufactured Gas Orifices attached in a bag.

Both Series may have blower as optional equipment.

INSPECTION AND TEST: These heaters were tested and approved by the American Gas Association. The report is on file and is part of the record.

RECOMMENDATION: On the basis of the test and data filed by the applicant, the Committee on Test Recommends the approval of Kenmore 138.536020, 138.535035A, 138.537-555T, 138.537570T, 138.556030A, 138.557545T and 138.557-560T for use in New York City when installed in accordance with this report and the provisions of Article 12, C26-191.0 of the Administrative Building Code be complied with, provided that each such heater shall bear a label, permanently affixed reading as follows: "Approved by the Board of Standard and Appeals for use in New York City under Calendar Number 892-56-SA."

USE: A floor support in Class 4 buildings. (bearing on cellar floor).

DESCRIPTION: The post is a telescopic screw type jack post and has a height range from 4 feet 8 inches to 7 feet 6 inches. The component parts are all of steel except for one cast iron nut. The screw is cold rolled steel, 0 feet 7 inches long with "V" threads. The lower tube is 2¾ inches O.D. with a wall thickness ranging from 0.110 inches to 0.112 inches and the upper or inner tube is 2½ inches O.D. with a wall thickness ranging from 0.116 inches to 0.125 inches.

INSPECTION AND TEST: Samples of the post were tested at Case Institute of Technology, Cleveland, Ohio., and the failures ranged from 24,000 to 24,600 pounds. The complete report is on file with and is part of the record.

RECOMMENDATION: The Committee on Test recommends the approval of Hi-Lo Jack Post (all steel telescopic screw jack basement or cellar column) for use in New

York City in buildings of Class 4 construction not exceeding three stories in height, on condition that the post shall not be used for loads in excess of 8,000 pounds, be equipped with cap and base plates, thick enough to prevent punching shear and that all cartons in which the material is marketed shall be marked, stamped or labeled "Approved by the Board of Standards and Appeals for use in New York City under Calendar Number 558-58-SM".

THE RESOLUTION—

WHEREAS, the report of a Committee on Test reads:

612-58-SA—Thunderbird Engineering Co., Phoenix, Arizona, filed October 24, 1958 an application for approval of the Minipump Rinse Injector under the provisions of the Submerged Inlet Rules of the Board.

USE: Injection pump for treating final rinse water in commercial dish washing machines.

DESCRIPTION: The Wyandotte Minipump Rinse Injector is designed to inject a fixed amount of rinse boosting material into the final rinse water line of commercial dish-washing machines. This appliance essentially consists of an automatic, line pressure-activated, variable-flow, positive displacement, metering pump powered by a fractional horsepower 110 volt A.C. shaded pole induction motor. Activation of the unit is accomplished by a pressure switch controlling the pump circuit. The hydraulic system of the pressure switch is independent, and isolated from, the discharge system of the pump. Provision is made for installation of the unit to comply with plumbing regulations, that is, the injection point is specified as being 6 inches below and on the discharge side of an approved hot water vacuum breaker.

The pump is designed to develop 600 psig when operating. Injection of the rinse boosting material into the final rinse water line is through a spring-loaded distribution fitting which is nominally rated at 150 psig back pressure. This design allows the distributing fitting to also function as a check valve. In addition to *this* check valve function, there follows immediately upstream from this distributing fitting a rubber-seated, spring-loaded, check valve which is incorporated into the discharge port of the rinse injector outlet.

Materials in contact with the final rinse water are brass, Series 400 stainless steel, and neoprene.

The injector incorporates an integral reservoir section of cast aluminum protected by an impervious heavy white vinyl film. This film is non-reactive with the rinse boosting material. The reservoir is equipped with a visual supply gauge and is sealed against evaporation and entry of foreign material. The inlet of the reservoir is fitted with a protective cap. Optional equipment includes a spring-

MINUTES

loaded, automatically closing, dust cover to prevent inadvertent exposure of the contents of the reservoir to atmospheric dust and other airborne contamination.

The flow of rinse boosting material is from the reservoir through a fine mesh bronze screen through a copper tube into a stainless steel pumping chamber, discharging through a copper tube to a brass discharge manifold, through a copper tube to the brass discharge port, through a check valve of brass, neoprene and stainless steel, then through copper tubing into the brass and stainless steel spring-loaded distribution fitting, then out into the final rinse water.

The pump section uses the fluid being pumped as its lubricant. The electric motor is a permanently lubricated type. The motor, gear drive, and electrical components are mounted in a self-draining housing to prevent contamination of the rinse booster reservoir with any lubricant or other material.

INSPECTION & TEST: Details of construction were examined by Ass't Engr. J. A. Darts. The appliance has been approved by the Underwriters' Laboratory under E 30365.

RECOMMENDATION: The Committee on Test recommends the approval of the Minipump Rinse Injector for voluntary use in New York City for treating final rinse water in commercial dish washing machines, on condition that the installation shall be protected by a check valve and approved vacuum breaker installed in accordance with the requirements of the Submerged Inlet Rules of the Board and further that the chemical used in conjunction with the appliance shall be acceptable to the Board of Health and each appliance shall bear a label, permanently affixed, reading "Approved by the Board of Standards and Appeals for use in New York City under Calendar Number 612-58-SA".

APPLICANT—The Per-Fab Company, Inc., owner—amendment, increased operating temperature.

APPEARANCES—

For Applicant: R. L. Faber.

ACTION OF BOARD—Resolution amended in accordance with the report and recommendation of Committee on Test.

THE VOTE—

Affirmative: Chairman Foley, Commissioner Fox and Commissioner Becker 3
Negative: 0
Absent: Vice Chairman Kleinert, and Commissioner Sleeper 2

THE RESOLUTION—

WHEREAS, the report of a Committee on Test reads: 720-58-SA—The Per-Fab Co., Inc., Bloomfield, New Jersey, requested by letter dated April 30, 1959 that the resolution adopted March 31, 1959 be amended to permit a higher operating temperature when Aroclor #1248 is used as a heat transfer medium. The case was reopened by a vote of the Board, May 26, 1959.

DESCRIPTION: Aroclor #1248 is a chlorinated biphenyl having a flashpoint of 379-384°F but no firepoint. It was previously approved as heat transfer medium in the Per-Fab electrically heated system for a maximum temperature of 400°F. The request has been made to increase the maximum operating temperature to 600°F when Aroclor #1248 is used, and the applicant has submitted letters dated April 23

and August 7th from Monsanto Chemical Company in support of his request.

RECOMMENDATION: The Committee on Test recommends that the resolution adopted March 31, 1959 under Calendar Number 720-58-SA be amended so as to permit a maximum operating temperature of 600°F when Aroclor #1248 having no fire point is used as the heat transfer medium provided the other requirements of the resolution adopted March 31, 1959 be complied with.

THE RESOLUTION—

Whereas, the report of a Committee on Test reads: 168-59-SA—U. S. Natural Gas Co., Hicksville, Long Island, filed March 19, 1959 for approval of their Tar Kettle Torch for use in New York City in accordance with the regulations of the Fire Commissioner dated August 5, 1958.

USE: A torch for use in tar kettles for melting tar, pitch or asphalt.

DESCRIPTION: The model RUSNG Tar Kettle Torch consists of a vaporizing chamber formed by welding together a 3 x 7½ inch pipe inserted within a 4 x 3½ inch pipe using ¼ inch spacers at each welded end. A ¼ inch by 1½ inch mounting bracket is welded at the end of the 3 inch pipe. The openings above and below the bracket serve as primary air intakes. A #60 drill standard gas orifice is threaded into a ¾ inch nipple mounted in the bracket and is supplied with petroleum gas through a standard ¾ inch pipe and a ¼ inch needle valve. The burner is welded to a 4 inch #16 ga. steel channel which acts as its base.

Liquefied petroleum gas is supplied from a standard L.C.C. cylinder which has an outlet inserted close to the bottom so that only liquefied gas is drawn off. The liquid petroleum gas passes through the cylinder shut off at a pressure regulated at the cylinder to 40 to 60 psi. and then through a neoprene pressure hose which is secured by threaded fitting to a ¼ inch liquid intake needle valve which is screened into a brass valve block. Liquid gas then passes through a copper capillary tube to the vaporizing chamber and the gas formed is returned by a separate capillary to a second needle valve installed in the valve block. This valve is then used to control the flow of gas through the ¾ inch pipe leading to the burner orifice.

INSPECTION AND TEST: All details were examined by Ass't. Engr. G. F. Sklenarik.

RECOMMENDATION: On the basis of the examination

171-59-SM

APPLICANT—K. S. M. Products, Inc., owner; Walter A. Kiel, agent.

APPEARANCES—

For Applicant: Walter A. Kiel.

ACTION OF BOARD—Material approved in accordance with the report and recommendation of Committee on Test.

THE VOTE—

Affirmative: Chairman Foley, Commissioner Fox and Commissioner Becker 3
Negative: 0
Absent: Vice Chairman Kleinert and Commissioner Sleeper 2

THE RESOLUTION—

WHEREAS, the report of a Committee on Test reads:
171-59-SM—K.S.M. Products Inc., Merchantville, New Jersey, filed March 17, 1959 for approval of the K.S.M. Shear Connector Studs under the provisions of C26-191.0 Administrative Building Code.

USE: The stud is a shear connector for composite steel and concrete floor and roof construction.

DESCRIPTION: The stud connector is essentially a round steel bar welded at one end to the "I" beam and having an upset end at the other. The stud resists horizontal shear by bending. The upset head, shank diameter plus ½ inch, prevents relative movement of the slab in a vertical direction.

The studs are fastened to the steel structure by a stud welding gun which utilizes an electric arc welding process.

When installed the system consists of a structural steel beam, a reinforced concrete slab and the Nelweld Stud welded to the beam and solidly embedded into the concrete slab, thereby combining these three elements into one structural unit.

A composite beam consisting of a concrete slab joined to a steel section by shear connectors, is designed using the conventional transformed section theory of reinforced concrete design. This involves an investigation of the maximum flexural and shearing stresses in the beam. In a steel beam which is a homogeneous section, the neutral axis passes through the center of gravity of the beam. For the design and analysis of a composite beam, the concrete slab is transformed into an equivalent steel area. This equivalent steel is proportioned according to the ratio of the modulus of elasticity of the steel to concrete known as N. The composite beam is therefore made similar to a homogeneous steel beam.

INSPECTION AND TEST: The applicant has filed a complete analysis with computations of the composite section and has also submitted test reports of slippage and shear tests and comparative tests of the stud as against the spiral.

The formula evolved from the test for the design load on

one stud connector and for the spacing of the stud connectors is as follows:

$$\text{Design load} = \frac{Q_{uc}}{F.S.} = \frac{330d^2 \sqrt{f_c}}{2.24}$$

$$\text{where } Q = 330d^2 \sqrt{f_c}$$

$$F.S. = 2.24$$

$$d = \text{Stud diameter}$$

$$f_c = \text{Concrete Stress at 28 days}$$

spacing

$$p = \frac{I_e}{MV_c} \times \frac{Q_{ue}}{F.S.}$$

$$\text{Where } p = \text{pitch or spacing}$$

$$I_e = \text{Moment of Inertia of composite section with } n = 10$$

$$V_c = \text{Vertical shear acting on composite beam}$$

$$M = \text{Statical moment of transformed concrete area about neutral axis of composite section with } N = 10$$

The complete report of the Fritz Engineering Laboratory, Lehigh University is on file with and is part of the record.

On the basis of the data supplied by the applicant, the Committee on Test recommends the approval of the K.S.M. Shear Connector Studs for composite steel and concrete floor and roof construction on the following conditions:

1. That all concrete and steel stress shall be as provided for under the pertinent sections of the Administrative Building Code but in no event shall the maximum allowable stresses exceed those values as provided under Table I of C26-364.0.

2. That all concrete work shall comply with the requirements of Sub Article 5, C26-468.0, Reinforced Concrete Construction.

3. During construction, the beams and girders, when necessary, shall be provided with supports to carry all loads until the concrete has set so as to prevent pre-and other straining beyond the maximum deflection of 1/360 of the span.

4. Where fire protection is required, the beam shall meet the requirements for Class I and Class II construction.

5. The depth of slab shall meet the requirements of C26-473.0 and the requirements of a T beam as set forth under C26-475.0 but in no event shall the top of the connector be less than 1 inch below the top of the unfinished slab or finished slab when poured monolithically.

6. The use of the beam shall be limited to a simple span with a maximum span of twenty-four times the depth of the beams from the top of slab to the bottom of steel, but not over 100 feet in any case.

7. The maximum live load shall not exceed 500 lbs. per square foot loads in excess of 125 lbs. per square foot shall be based on use in Class I and Class II construction.

8. All work shall be performed under the supervision of a licensed professional engineer of the company and all materials and workmanship shall meet the requirements of the Administrative Building Code and the Rules of the Board.

9. All plans filed with the Department of Buildings showing the proposed use of this system shall be stamped "Approved by the Board of Standards and Appeals for use in New York City under Calendar Number 171-59-SM and all containers in which the studs are marketed shall be similarly marked.

THE RESOLUTION—

WHEREAS, the report of a Committee on Test reads:
367-59-SA—Automatic Burner Corp., Chicago, Illinois, filed June 5, 1959 for approval of the ABC Oil Burner, Model 75, for use in New York City under the provisions of the Oil Burner Rules of the Board. The burner will also be marketed under other trade names.

USE: A conversion burner.

DESCRIPTION: The Model 75 is a high pressure gun type burner designed to burn No. 2 fuel oil. It has an aluminum die cast blower housing to which is assembled a $\frac{1}{8}$ hp motor, a 6000 V. grounded transformer, a 3" diameter air tube and Sundstrand or Webster single or two stage fuel unit.

The firing range of the burner is .5 to 1.65 GPH.

INSPECTION AND TEST: All details were examined by Ass't. Engr. G. F. Sklenarik. The burner has been tested and listed by Underwriters' Laboratories.

RECOMMENDATION: On the basis of the examination and the data submitted by the applicant, the Committee on Test recommends the approval of the ABC Oil Burner, Model 75, for use in New York City under the provisions of the Oil Burner Rules of the Board provided each burner shall bear a label, permanently affixed, reading "Approved by the Board of Standards and Appeals for use in New York City under Calendar Number 367-59-SA". This burner may also be marketed under the trade names of the following companies as their Model 75 burner: American Standard; Atlantic Steel Boiler Co.; Burnham Corporation; Bryant, Div. of Carrier; The Coleman Co.; Dowagaic Steel Furnace Co.; Floral City Heater Division; Gross-Aire Mfg.; The Hess Co.; Home Furnace Co.; H. 467-59-SA—National-U.S. Radiator Corp., Johnstown, Pa., filed July 15, 1959 for approval of the Mark II, GP-15-WE Gas Fired Packet Boiler under the provisions of Article 12, Administrative Building Code.

USE: Gas fired boilers for residential or commercial heating and hot water supply.

DESCRIPTION: The GP-15-WE models are steel boilers assembled within a steel jacket that is insulated with a layer of glass wool. The top of the boiler has a space to act as a built in expansion tank and air eliminator. An additional expansion tank can be installed external to the boiler in the heating system when required. A water circulator is installed at the side of the boiler for forced circulation of hot water through the heating system. Domestic hot water is supplied from a tankless hot water heater installed in the top of the boiler below the water line.

The boiler is fired with a single port upshot burner with flame spreader. Gas is supplied through a gas pressure regulator valve and automatic gas valve. Controls consist of a safety pilot for ignition and gas shut down in case of flame failure and water temperature limit control. Each boiler is equipped with an ASME pressure relief valve.

INSPECTION AND TEST: All details of construction were examined by Ass't. Engr. G. F. Sklenarik.

The GP-15-WE boilers are built in accordance with the ASME code for pressure vessels and have been tested and approved by the AGA for a heat input of 115,000 BTU per hour max.

RECOMMENDATION: The Committee on Test recommends the approval of the Mark II, GP-15-WE Gas Fired Packet Boiler for use in New York City under the provisions of Article 12, Administrative Building Code provided each unit shall bear a label, permanently affixed, reading "Approved by the Board of Standards and Appeals for use in New York City under Calendar Number 467-59-SA".

Heat UP-1A 2A, 3A and Contractor FD-225, 275, 375 and
400 Conversion Gas Burners under the provisions of Article
12, Administrative Building Code.

USE: Conversion type gas burners for installation in fur-
naces or boilers.

DESCRIPTION: The Tele-Tube series burner is an at-
mospheric inshot type with flame spreader. It has a tele-
scoping venturi tube which gives the burner a variable length
from 6½" to 13½". Primary and secondary air are adjust-
able. Each burner is equipped with a combination gas valve
and 100% safety pilot. The capacity of the burner is from
50,000 to 225,000 Btu per hour input. The Spread Heat
burner is an atmospheric upshot burner with flame spreader.
Primary air intake is adjustable and has a locking screw.
Secondary air is supplied through an adjustable air door.
Each burner is equipped with a pressure regulator and com-
bination gas valve with 100% safety pilot. The capacity of
the UP-1A is 50,000 to 120,000 Btu per hour, of the UP-2A,
50,000 to 240,000 Btu per hour and of the UP-3A, 200,000 to
400,000 Btu per hour.

The Contractor series is a power gas burner made with
a 4" diameter blast tube fitted with an adjustable flange for
positioning the burner in the combustion chamber. The blast
tube is available in four different lengths. Each burner is
equipped with an automatic gas valve and safety pilot. Pri-
mary and secondary combustion air are adjustable and the
gas orifice may also be adjusted to vary the capacity of the
burner.

The capacities of the various models are:

FD-225.....	75,000 to 225,000 Btu per hr. input
FD-275.....	75,000 to 275,000 " " " "

PUBLIC HEARING

Cal. No. 353-30-SR

NOTICE IS HEREBY GIVEN that a public hearing will be held by the Board of Standards and Appeals Friday, Street, Manhattan, on the following proposed amendments to the Rules governing the use of equipment for Spraying and Drying of Paints, Varnishes, Lacquers and other inflammable surface Coatings and Storage of such Materials. New Matter in Italics, Matter to be deleted in Brackets.

4. Specification for Spray Booths, Spray Rooms, Dip and Immersing Rooms, Drying Equipment and Material Storage Rooms.

4.1.1 Spray, dip and immersing rooms shall be enclosed on all sides with partitions constructed of incombustible materials with floors in such rooms of concrete. Where such rooms are located over wooden floors, such wooden floors shall be surfaced with 1" of grout adequately reinforced or a mixture of Portland cement, asphalt and sand similarly reinforced. Ceilings over such rooms shall be protected by $\frac{5}{8}$ " unsanded gypsum plaster or $\frac{7}{8}$ " of cement or sanded gypsum plaster on approved 3.0 lb. metal lath or other equivalent fire resisting ceiling protection. Ventilation, lighting and heating for these rooms shall comply with the requirements of these rules. Where additional fire fighting equipment is necessary such equipment shall be furnished in accordance with the direction of the Fire Commissioner. Floor drains leading to the house draining system or the public sewer shall not be permitted. [All] Dip tanks shall be provided with hinged metal covers held open by a fusible link, such covers to be equipped with an opening to permit automatic flooding of the tank with fire extinguishing media of a type and so located as the Fire Commissioner shall direct. *Where the work process, such as conveyorized operation, makes the use of a cover impractical, the dip tank and drain boards shall be protected by an adequate extinguishing system designed for manual and automatic operation and satisfactory to the Fire Commissioner.*

4.3 Drying Equipment.

4.3.1 Gas Fired Drying Ovens. Gas fired drying ovens shall be of a type as approved by the Board. Such ovens shall be constructed of metal and incombustible materials so designed as to preclude the direct application of flame to the materials in process. [The exhausts from both the heating compartments and the drying compartment shall be individually equipped with adequate fans and exhaust piping connected directly to the outer air]. *Ventilation shall be provided for each oven of sufficient capacity to maintain an oven vapor concentration at all times during the drying process of less than $\frac{1}{4}$ the low explosive limit of the solvent used. All oven openings shall be maintained at a negative pressure to maintain inward flow. The controls for the safety exhaust and recirculating fans shall be [so] properly interlocked with the gas supply line so that when the gas is flowing the fans are in operation. A time delay relay shall be installed to provide a minimum of four oven volume changes with fresh air and in the case of an indirect fired type of oven simultaneous purging of the combustion chamber before the ignition system may be operated.*

[An extra switch shall be provided to permit the operation of the fans when the gas supply is off]. Each oven shall be equipped with approved gas burning equipment with electrical controls so arranged as to shut off the gas valve when ignition fails or the gas supply pressure drops to 2 inches of water.

The use of a continuous gas pilot light is prohibited unless an automatic gas shut off valve is provided which will shut the gas off at the pilot light when the flame is extinguished or the supply of gas cut off. Electrical pilot ignition shall be of the continuous type or equal in performance, designed for use in high temperatures, with controls so interlocked as to shut off the gas supply when current is interrupted. An auxiliary manually operated gas shut off valve shall be located not nearer than 25 feet from the oven so as to control the gas supply in the event of an emergency. Such ovens shall be adequately insulated on all sides, including the base, which shall have the equivalent of a double thickness of such insulation unless the floor is protected by a 3 inch mat of reinforced concrete placed over and bonded into the existing concrete floor and projecting not less than 6 inches outside the projected area of the equipment or unless an unenclosed clear air space not less than 4 inches above the floor is maintained between the floor and the underside of the oven.

4.3.1.1 *The burner section of gas fired drying ovens shall not be located nearer than 25 feet from spraying or dipping spaces. [Unless such oven is approved for use in explosive atmospheres].*

4.3.2 Electric Infra-red Ray Drying Ovens.

4.3.2.1.1 In drying processed material involving the evaporation of considerable amounts of flammable solvents by infra-red lamps, such installations shall not be confined in small rooms unless such rooms are thoroughly ventilated by a power driven ventilation system of sufficient capacity to provide 100 linear feet of air per minute over the entire surface of the processed material: the controls of the ventilation system to be so interlocked with the Infra-Red Ray System that the latter cannot function unless the ventilating system is in operation. When equipped with duct ventilating system, the Infra-Red Ray Oven shall be adequately secured so as to prevent moving.

4.3.2.1.4 *Lamp and resistance heater type drying units shall be separated from spraying and dipping processes complying with these rules by a distance of at least 15 feet or shall be installed in a separate fireproof room.*

4.3.2.1.6 Where there are no conveyors and the material being processed is left stationary in the dryer there shall be an excessive temperature switch to shut off the lamps or resistance heaters to avoid overheating the material being processed if it is not removed from the dryer in time.

4.3.3 [The use of these processes shall be limited to metal or other incombustible material requiring paint processing]. *The temperature of the air contacting the processed material shall not be higher than that to which such material can be safely subjected, but not over 350°.*

RULES

Fire Drill Rules, Adopted by the Board of Standards and Appeals, October 5, 1923

(593-23-SR)

DEFINITION OF "FIRE DRILL"

The method and practice of the systematic and orderly vacating of a building by its occupants in case of emergency, panic or fire in the least possible time—by the nearest safe means of exit—and the use of fire appliances which shall be provided for the extinguishing or retarding of fire and the safeguarding of human life.

Rule 1.

In all buildings as defined in Article 1, Section 10 of the Labor Law in which fire drills are required pursuant to Section 279 thereof and in any other building in which such drills are required by the Fire Commissioner pursuant to the power conferred in section 491 of the New York City Charter, it shall be the duty of the owners, lessees or tenants to conduct fire drills monthly and at such other times as the Fire Commissioner may direct.

For the purpose of conducting such fire drills the owner or tenants shall appoint from among their employees such responsible and dependable persons, male or female, who shall efficiently perform the duties of the various positions of the fire drill organization, as specified on the accompanying chart.

It shall be the duty of the owner or tenant to enter in the blank spaces provided for that purpose in said chart the names of persons so selected and post said chart and copies of the rules in a conspicuous place.

Rule 2. Duties of Foreman.

The Foreman or Person in Charge shall direct, enforce and have full charge of the "Fire Drill" in every factory on each floor. Each day before work is begun he shall see that extinguishers, fire hose, fire buckets, etc., are in readiness for use, exit doors are unlocked, aisles are free from obstruction, that stairways, halls, etc., are properly lighted, and shall remedy any dangerous condition found to exist. Immediately after work is commenced he shall check up the Fire Drill Organization list and note if the regularly assigned persons are present; if any are found to be absent, he shall assign other employees (if practicable) to perform their duties.

He shall immediately notify new employees of the existence of the Fire Drill Organization and give them the necessary instructions as to the duties they are to perform, etc.

He shall be familiar with the operation and location of the interior alarm signal box on his floor.

He shall listen for the test signal each morning at the appointed hour and in the event of the test signal not being heard he shall communicate with the superintendent or other person in charge of the building and advise him of the fact. The (Floor Captain's) Foreman's orders are final as to the carrying out of the fire drill on his particular floor.

Rule 3. Duties of Watchmen.

The WATCHMEN shall see that all doors and windows are closed so as to prevent the spread of fire. The WATCHMEN shall be the only persons permitted to remain on the floor during the progress of a fire drill and do so at their own risk. For ordinary purposes only one watchman and a substitute shall be designated. In special cases, however, extra watchmen may be assigned by consent in writing from Fire Commissioner.

Rule 4. Duties of Searchers.

The MALE AND FEMALE SEARCHERS shall search all toilets, dressing rooms and emergency rooms used and frequented by their sex and all other portions of the floor and order all persons, except those authorized to remain, to leave the premises. They are to take care of and assist all persons who may faint or be disabled.

SEARCHERS shall leave the floor immediately after the last squad leaves.

Rule 5. Duties of Street Alarm Box Runner.

The STREET-ALARM-BOX-RUNNER shall be familiar with the location of the nearest city fire alarm box and know how it is operated.

In ordinary practice fire drills the STREET-ALARM-BOX-RUNNER shall report to the Foreman for orders, and if his services are not required he shall promptly file out of the premises with the other occupants.

Only when a fire actually occurs on his floor, or when ordered to do so by the Foreman, shall the STREET-ALARM-BOX-RUNNER proceed to the street alarm box and send in the fire alarm.

Rule 6. Duties of Fire Brigade.

The fire brigade shall have full charge of the operation of all auxiliary fire fighting apparatus and shall endeavor to extinguish, or at least hold in check until the arrival of the Fire Department, any fire that may occur. When it is necessary for the fire brigade to respond to different

floors in the building they shall not use the stairways or fire escapes while the occupants are escaping from the premises.

Rule 7. Duties of Exit Guards.

The EXIT GUARDS shall station themselves at all exit doors leading to fire escapes, stairways, and other means of escape immediately upon the sounding of the alarm. There shall be two guards for each exit, if practicable; one to stand in the hallway holding back the door and the other directly inside on the floor. They are to keep the exit doors open and direct the movements of the persons using these exits and prevent congestion.

EXIT GUARDS shall remain at their stations until all of the occupants of the building have passed their station. Then close their doors and pass out of the building. Upon signal for the occupants to return, EXIT GUARDS shall take their designated stations and remain there until all persons have returned to their respective floors.

Rule 8. Duties of Squad Monitors.

The SQUAD MONITORS, as soon as the alarm is sounded, shall see that the employees under their charge quickly form into line, two abreast, and numbering not more than thirty to each squad. They shall see that all aisles and passageways are cleared of obstructions.

Note: Chairs, stools, baskets, etc., should be pushed under or placed on top of work benches.

MONITORS shall proceed at the head of their respective squads to the exit assigned, and then march up or down the stairs or to other exits as directed by the EXIT GUARDS.

On reaching the sidewalk MONITORS shall keep their squads in order and lead them a reasonable distance from the building, so as not to cause congestion and interference with fire apparatus. When the proper signal is given they shall return to their respective floors at head of their squads.

MONITORS will at all times see that those under their charge conduct themselves in a respectable and orderly manner.

Rule 9. Holding of Drills.

FIRE DRILLS shall be held at least once each month at varied hours of the day, and all of the occupants shall participate therein simultaneously. Such drills shall conduct all occupants to a place of safety.

Where dual operation interior fire alarm systems are installed as permitted under Rule 10.1 of the interior fire alarm rules of the Board of Standards and Appeals, the fire drill conducted each month shall include all of the persons on the premises engaged at work for a factory, and drills shall be conducted at least twice, each year in which all of the persons on the premises shall participate simultaneously.

Rule 10. Duties of Owner.

It shall be the duty of the OWNER, LESSEE OR TENANT OF THE BUILDING or his authorized agent or their representatives to personally observe that the "Fire Drill" is held simultaneously on every floor of the building and the participation therein of every occupant of such building. Any FIRE DRILL in which all of the occupants do not participate shall not be considered as complying with the LAW, except as otherwise provided in these rules.

The person or persons representing the OWNERS, LESSEE OR TENANT, who supervises the FIRE DRILL at the building shall submit to an examination by the Division of Fire Prevention as to their experience and general fitness for such duties, and shall be so certified in writing by the FIRE COMMISSIONER.

It shall be the duty of the ENGINEER, SUPERINTENDENT or other PERSON IN CHARGE of a building having an interior fire alarm system to test such system daily immediately after the beginning of business, and to see that all apparatus operated by springs, requiring winding are rewound after each alarm and kept in normal condition for operation.

Rule 11. Duties of Engineer.

Whenever it is necessary to test the fire alarm system at any other time of the day, owing to repairs, etc., being made, the PERSON IN CHARGE OF BUILDING will first notify all Foremen of the several floors of the intended test and likewise notify them when the repairs, etc. are completed. This precaution is taken to prevent confusion and excitement, also misunderstanding of the alarm signals.

It shall also be the duty of the PERSON IN CHARGE OF BUILDING to sound the interior alarm system at irregular intervals, but not less than once each calendar month, for the purpose of holding practice fire drills. He shall keep on the premises a record of such drills, showing the date when held and the required time for all occupants to reach the street or a point of safety outside the building.

The PERSON IN CHARGE OF BUILDING must immediately acquaint new tenants of the existence of the "Fire Drill" Organization and its purport.

Rule 12. Registration.

The name and address of every person, corporation or co-partnership, that will, under professional service, carry on the trade, business or calling of establishing, maintaining or supervising the "Fire Drill" shall be registered in the Fire Department, which Department shall, upon evidence of fitness, grant a certificate to that effect.

APPLICANT—Keasbey & Mattison Company, owner.

APPEARANCES—

For Applicant: Frank Q. Chambers.

ACTION OF BOARD—Resolution amended in accordance
with the report and recommendation of Committee on Test.

THE VOTE—

Affirmative: Chairman Foley, Vice Chairman Kleinert,
Commissioner Fox and Commissioner Becker 4
Negative: 0
Absent: Commissioner Sleeper 1

THE RESOLUTION—

WHEREAS, the report of a Committee on Test reads:
32-41-SM—Amendment to resolution as to additional forms
of construction.

Keasbey & Mattison Co., Ambler, Pa., requested by letter
dated March 3, 1958 that the resolution adopted January 19,
1943 and amended July 2, 1957 under Calendar Number 32-
41-SM be amended as to include additional forms of con-
struction. The application was reopened by a vote of the
Board May 6, 1958.

USE: The material (a sprayed asbestos) is used as a com-
ponent part of a three and four hour fire resistive floor and
ceiling construction and three, four and five hour fire re-
sistive columns.

DESCRIPTION: The material is the same as that ap-
proved July 2, 1957 and the construction is similar to that
approved except that the asbestos was applied directly with-
out the use of an adhesive to the underside of the floor unit
or to the cage of the steel beam and the thickness of the
asbestos has been reduced.

The columns were protected in the same manner as the
approved columns except that there was no adhesive applied
to the column and the thickness varied in order to get the
fire resistive rating required.

INSPECTION AND TEST: The floor and ceiling con-
struction were tested at Fire Research Station, England, un-
der the supervision of the Underwriters' Laboratory and in
accordance with the requirements of C26-588.0 through
C26-590 and C26-596 through C26-599.0 Administrative
Building Code. The floor units were protected by $\frac{1}{2}$ " of
asbestos as measured to the bottom plane of the floor units
and $1\frac{1}{2}$ " on the beam soffit and $1\frac{1}{4}$ " on the lath on the beam
cage opposite the web. The construction successfully met
the requirements of a three hour fire resistive floor and ceil-
ing construction. The complete report, Underwriters' Labora-
tory Retardant 3705-3 is on file with and is part of the record.

The columns were tested in accordance with C26-593.0 and
C26-599.0 Administrative Building Code. Column 1 had
 $2\frac{1}{4}$ " of asbestos; Column 2 had $3\frac{3}{8}$ " of asbestos; and Col-
umn 3 had $2\frac{3}{4}$ " of asbestos. The results were as follows:

Column 1— $2\frac{1}{4}$ "—3 hour fire resistive column.
Column 2— $3\frac{3}{8}$ "—5 hour fire resistive column.
Column 3— $2\frac{3}{4}$ "—5 hour fire resistive column.

The complete report Underwriters' Laboratory 3705-4, 5
& 6 is on file with and is part of the record.

RECOMMENDATION: The Committee on Test recom-
mends that the resolution adopted July 2, 1957 under Cal-
endar Number 32-41-SM be amended so as to include the
additional methods of construction as herein described,
namely, three hour fire resistive floor and ceiling construc-
tion having $\frac{1}{2}$ " asbestos on the underside of the floor units
and the beam having $1\frac{1}{2}$ " on the beam soffit and $1\frac{1}{4}$ " on the
lath on the beam cage opposite the beam and for column
protection as follows: $2\frac{1}{4}$ " protection—3 hours; $2\frac{3}{4}$ " and
 $3\frac{3}{8}$ " protection—5 hours, on condition that the requirements
of the resolution adopted July 2, 1957 under Calendar Num-
ber 32-41-SM be complied with.

THE RESOLUTION—

854-55-SA—Richmond Radiator Co., filed October 14, 1955 for approval of the Richmond Oil Fired Furnaces under the provisions of Article 12, Chapter 26 and the Oil Burner Rules of the Board. The application was on the dismissal list July 7, 1959 but was removed at the request of the applicant.

USE: Oil fired furnaces for domestic and commercial installation.

DESCRIPTION: The furnaces are designated as counterflow, low boy, high boy and suspended types. The units consist of a casing, heating element, combustion chamber and pressure atomizer gun type oil burner. The oil burner used in conjunction with the furnace is an ABC Oil Burner approved by the Board.

INSPECTION AND TEST: Details of construction were examined by Ass't. Engr. J. A. Darts. The furnaces have been approved by the Underwriters' Laboratory.

RECOMMENDATION: The Committee on Test recommends the approval of the Richmond Oil Fired Furnaces, Series CO (counterflow), LO (low boy), SH (low boy), VO (high boy vertical) and AO (suspended) for use in New York City when installed in accordance with the requirements of Article 12, Chapter 26 and the Oil Burner Rules of the Board and further that the appliance shall not be installed in garages or places of explosive atmospheres and that the appliance shall bear a label, permanently affixed, reading "Approved by the Board of Standards and Appeals for use in New York City under Calendar Number 854-55-SA." The Committee further recommends that the furnace may be marketed by the Rheem Manufacturing Company under the trade name of Rheem Oil Fired Furnace, Series 2420, 2430, 2431, 2440 and 2450.

It is further recommended that the owner-manufacturer may be now known as Richmond Plumbing Fixture Division Rheem Manufacturing Company.

855-55-SA—Richmond Radiator Co., filed October 14, 1955 for approval of the Richmond Oil Fired Boilers under the provisions of the Oil Burner Rules and Article 12, Chapter 26, Administrative Building Code.

USE: Cast iron oil fired boiler.

DESCRIPTION: The boiler consists of a jacket, cast iron sectional boiler unit, refractory type two piece combustion chamber. The burner is an ABC Oil Burner, previously

approved by the Board, and controls which are mounted in front of the boiler for convenience.

INSPECTION AND TEST: Details of construction were examined by Ass't. Engr. J. A. Darts. The boilers are approved by the Underwriters' Laboratory.

RECOMMENDATION: The Committee on Test recommends the approval Richmond Oil Fired Boiler, Series R and PR for use in New York City when installed in accordance with the requirements of the Oil Burner Rules of the Board and Article 12, Chapter 26, on condition that the boilers bear a label, permanently affixed, reading "Approved by the Board of Standards and Appeals for use in New York City under Calendar Number 855-55-SA."

The Committee further recommends that the boiler may be marketed by Rheem Manufacturing Co. under the trade name Rheem Oil Fired Boiler, Series O and PO.

The Committee further recommends that the owner-manufacturer may now be known as Richmond Plumbing Fixture Division Rheem Manufacturing Company.

THE RESOLUTION—

WHEREAS, the report of a Committee on Test reads:

80-56-SM—Acrow Corporation of America, Inc., Carlstadt, New Jersey, filed January 30, 1956 for approval of the Acrow Adjustable Steel Shores, 0X, 1X, 2X, 3X, & 4X under the provisions of the Demolition Rules of the Board.

USE: Shores to be used for form work in construction.

DESCRIPTION: The shore is an adjustable length, telescoping tubular steel shore having a welded steel head and base plate. The outside diameter of all sizes is 2.40" for the lower member and 1.90" for the upper member. The wall thickness for the shores 0X through 3X is 0.160" for the upper member and .192" for the lower member and for the 4X the tube thickness is .192". The inner tube has a series of nine 1 1/16" diameter holes drilled through allowing a maximum range of adjustment of 56" in major steps of 5 1/2". Finer adjustment is obtained by means of 11 1/4" long continuous 4-Pitch modified Acme thread on the lower member. The threads are 1/16" deep. Two 1 1/16" wide slots, 7 1/2" long diametrically opposed are milled in the threaded section of the lower member. A heavy duty malleable iron nut provides the adjustment and transfers the load to the external member. Lugs are incorporated in the nut for attachment of an adjusting handle. A 5/8" diameter cold rolled steel pin inserted in the slots of the outer member and through the holes of the inner member transfers the load to the upper face of the nut.

INSPECTION AND TEST: The shores were tested at Columbia University and all shores were tested at their lowest, intermediate and maximum height.

Results were as follows:

MINUTES

Shore	Heights as Tested			Test Loads			Allowable Load Test Load ÷ 4		
0X	3'-5"	5'-0"	6'-0"	25,050	27,500	27,650	6250	6850	6900
1X	5'-9"	8'-0"	10'-3"	30,350	28,850	16,400	7600	7200	4100
2X	6'-7"	9'-0"	11'-0"	31,250	22,800	18,100	7800	5700	4500
3X	8'-0"	9'-0"	13'-0"	26,450	22,150	13,700	6600	5500	4400
4X	10'-6"	13'-0"	16'-0"	22,800	15,150	11,500	5700	3800	2900

RECOMMENDATION: The Committee on Test recommends the approval of Acrow Steel Shores 0X, 1X, 2X and 4X for use in New York City under the provisions of Rule 7.8.1.3 of the Demolition Rules of the Board with the following allowable load on each shore.

Shore	Length of Shore and Allowable Load on Each Shore		
0X	3'-05"	5'-0"	6'-0"
	6250	6850	6900
1X	5'-9"	8'-0"	10'-3"

	6600	5500	4400
4X	10'-6"	13'-0"	16'-0"
	5700	3800	2900

The Committee further recommends that when these shores are used the individual, firm or corporation who does the concrete work shall comply with the requirements of Rule 7.8.1.6 of the Demolition Rules of the Board, but the compliance with this rule does not abrogate the compliance with the balance of Demolition Rules of the Board.

The Committee further recommends that the applicant file a separate application for approval of the material Acrow-Span as they do not consider that it should be incorporated in this approval.

USE: Steel cabinets for the storage of paint and thinners.
DESCRIPTION: These cabinets are made in various sizes and shapes to store up to 200 gallons of spraying and dipping materials.

All cabinets are constructed of not less than 18 gauge sheet steel. The cabinet for storage of not more than 100 gallons may be either single or double walled. The cabinet for storage of more than 100 gallons but not more than 200 gallons is framed with angle irons and are double walled all sides including top, bottom and doors, with 1½" air space separating walls. All joints are lapped over each other and spot welded or arc welded to make a tight assembly. Self closing doors are hinged to cabinet with a pair of hinges and doors are equipped with three point latches. The cabinets have 2" door sills, and also have 2" x 6" vent ducts at the rear interior vented to the outer air. There is a 4" to 6" dia. vent located at top rear exterior of cabinet. These cabinets will contain either: shelves for the storage of cans or cradles for drums or both.

INSPECTION AND TEST: All details of construction were examined by Ass't. Architect T. W. Farricker.

RECOMMENDATION: The Committee on Test recommends the approval of Manhattan Paint Storage Cabinet for flammable liquids, on condition that no more than 200 gallons of spray and dipping materials and thinners be stored in the cabinet at any time and the cabinets to be constructed and vented as required by the Rules of the Board; Paint Spraying Rules adopted under Calendar Number 353-30-SR. 806-57-SA—Amendment to resolution as to additional model of washing machine.

Blackstone Corp., Jamestown, New York, requested by letter September 23, 1959 that the resolution adopted March 31, 1959 under Calendar Number 806-57-SA be reopened and amended so as to include additional models of automatic washing machine.

USE: 9 lbs. clothes washing machine.

DESCRIPTION: The requested models are a modification of the previously approved models; the modification consisting of the location of the water inlet tube and housing for this tube. The housing is placed on the top-rear of the machine instead of the rear and so positioning the housing places it above the washer top. In addition the water is introduced into the machine through a one inch air gap.

INSPECTION AND TEST: Details of construction were examined by Ass't. Engr. J. A. Darts and the water supply feature of the requested models were compared to those models previously approved.

RECOMMENDATIONS: The Committee on Test recommends that the resolution adopted March 31, 1959 under Calendar Number 806-57-SA be reopened and amended so as to include the additional models of Blackstone Washing Machines, Models WAA-50, WAA-60, WCC-50 and

THE RESOLUTION—

WHEREAS, the report of a Committee on Test reads:

125-58-SA—The Diversey Corp., Chicago, Illinois, filed March 12, 1958 an application for approval of the Diversey Divomatic Master Series 1000 Solution Controller, Model D-1002, under the provisions of the Submerged Inlet Rules of the Board.

USE: Detergent feeder for use in dishwashing machines.

DESCRIPTION: The unit is designed to give a correct concentration of wash solution in dishwashing machines by means of an electronic compound feeder. The operation is as follows: The concentration of wash solution is continually measured by the electrodes which are immersed in the wash solution of the tank where automatic control is maintained when the water solution falls below the desired concentration. The control head opens a solenoid valve and hot water flows through the solenoid valve and jet head into the compound hopper where it mixes with the cleansing compound. As water continues to flow into the hopper, the solution level is raised so that water containing the dissolved compound overflows through a dispensing tube into the wash solution tank. When a sufficient amount of dissolved compound has passed through the overflow dispensing tube into the wash tank, the control head closes the solenoid valve and further flow of the dissolved compound into the wash tank is stopped.

INSPECTION AND TEST: Details of construction were examined by Ass't. Engr. J. A. Darts. The appliance has been approved by the Department of Water and Sewers, City of Chicago.

RECOMMENDATION: The Committee on Test recommends the approval for voluntary use of the Diversey Divomatic Master Series 1000 Solution Controller, Model D-1002, on condition that the unit be protected by an approved vacuum breaker and check valve as required under the Submerged Inlet Rules of the Board, that the detergent used in conjunction with this equipment shall be approved by the Board of Health, that all electrical work shall comply with the requirements of the Electrical Code of the City of New York and that each appliance bear a label, permanently affixed, reading "Approved by the Board of Standards and Appeals for use in New York City under Calendar Number 125-58-SA."

THE RESOLUTION—

WHEREAS, the report of a Committee on Test reads:

495-58-SM—Rilco Laminated Products, Inc., New York, filed August 22, 1958 for approval of the Rilco Glued Laminated Timber for use under the provisions of C26-370.0 through C26-370.6 Administrative Building Code.

USE: The material is to be used in timber construction.

Glued laminated timbers, not solid as shown by nature, are assembled of laminations, glued up and put under pressure to form structural beams, columns and arches.

In the process manufacturing, the lumber is examined for defects, such as knots, checks, etc. and soundest pieces are set aside for use in the upper and lower faces of the beam. The lumber having knots etc. are placed at or near the neutral axis of the section. When necessary to form a long

beam, smaller planks are glued together, using a scarf joint (1 to 15) to form a continuous plank of the length desired.

The planks, joined together by means of the scarfed joints, where necessary, are then ready for the laminating process.

The plank, which is to be used in the extreme face of the section is glued on one side only and then placed in the pressure rig. Each succeeding plank is then glued on both faces and placed one on top of the other, above the first plank. The last plank used gives the desired depth to the section and is glued on one face only and placed on its proper position. When the planks are correctly positioned, pressure is applied to the section by means of stay bolts; these bolts are tightened in a certain specified manner, periodically for the first three hours that the section is in the pressure rig; then removed and the section is allowed to cure for 1 week.

The glue used by the manufacturer in the process is known as National Casein #30CP and in the process of laminating, temperature and time are closely related so that it is necessary for the manufacturer to adhere to the time schedule specified for the temperature in the room or space where the beam is being laminated.

INSPECTION AND TEST: Tests were conducted in order to determine the fiber stresses in a laminated beam and column. A column 0'-11" x 0'-11" x 12'-0" was tested at Lehigh University. The column failed under a load of 745,200 lbs. which corresponds to compressive stress of 6090 p.s.i. A beam 0'-9" x 3'-0" x 52'-0" long was tested at the research Department of Association of American Railroad, Chicago, Illinois. The beam failed under a stress of 8150 p.s.i. The complete reports are on file with and are part of the record.

RECOMMENDATION: On the basis of the test and the data filed by the applicant, the Committee on Test recommends the approval of the material Rilco Glued Laminated Timber as manufactured by the Rilco Laminated Products, Inc., for use in New York City under the provisions of C26-370, through C26-370.6 under the following conditions:

1. that the glue used shall be as herein described.
2. that the top and bottom laminations shall not have scarf joints located nearer to the center than $\frac{1}{4}$ of the beam length from the ends and that the material shall be Douglas Fir Coast Region Dense Structural with the following allowable stresses; bending extreme fibers—2150 p.s.i. Compression parallel to grain—1550 p.s.i.—Compression perpendicular to grain—455 p.s.i.—Horizontal Shear—145 p.s.i. and Modulus of Elasticity—1,600,000.

The Committee further recommends that all invoices, bills of lading or bills of materials shall be marked or stamped as follows "Approved by the Board of Standards and Appeals for use in New York City under Calendar Number 495-58-SM."

THE RESOLUTION—

WHEREAS, the report of a Committee on Test reads:
152-59-SA—Caloric Appliance Corp., Tipton, Pa., filed March 16, 1959 for approval of the Caloric Gas-fired Heating and Cooking Range, Models CPHC3, CPHC4, and CPH36 for use in New York City under the provisions of Article 12, of the Administrative Building Code.

USE: The appliances are domestic ranges used for cooking and heating purposes.

DESCRIPTION: The Bungalow type H Series, Models CPH36 Heater Range is a conventional 36 in. free standing gas range equipped with 4 double duty top burners, with an oven on the right hand side having an input rating of 18,000 Btu/hr. The space on the left hand side normally used for storage utensils is fitted with a heavy gauge vented space heater fired with a luminous flame gas burner rated at 30,000 Btu/hr. input. Cold air enters the bottom of the unit and the left end 22 gauge steel panel of the range is supplied with a 9 gauge (AS&W) wire grille opening to permit passage of the heated air to the room.

All burners are supplied with pilots for automatic ignition. In addition, the concealed oven and heater burners are supplied with automatic pilot valves which act to shut off the gas supply to their respective burners in the event of pilot failure.

The range may be supplied with variations in backguard equipment and top burners, and other optional equipment, use of which is indicated by the addition to the model number of the suffixes outlined below.

PREFIX:

CP—Automatic oven ignition.

SUFFIXES:

D—Deluxe backguard.

K—Oven interior light, solid oven door.

X—Oven interior light, with glass window in oven door.

T—One top burner with automatic top burner heat control.

TT—Two top burners with automatic top burner heat control.

B—Blower equipped room heater section.

C—Water coil equipped room heater section.

Models comply with the minimum requirements for gas ranges which display the "CP" trade-mark.

The Bungalow Type C Series, Model CPHC3 Heater Range is the same as Model CPH36 except for the following:

The space heater input is rated at 35,000 Btu/hr input. HC Series room heater input rating: 35,000 Btu/hr. (natural & mixed).

HC Series room heater input rating: 32,000 Btu/hr. (manufactured).

PREFIXES:

9—Aluminum burner bowls and standard door handles.

CP—Automatic pilot on oven and boiler.

HC—Gas-fired heater section left side in place of storage section (used only with prefix "CP").

SUFFIXES: In addition to Model CPH36, include the following:

O—Standard backguard.

U—Deluxe backguard with clock, light, minute minder, oven light.

A—Same as U plus automatic oven control clock timed convenience outlet, oven temperature indicator light, meat thermometer (used only with CP prefix).

S—Single duty type burners (immediately after No. iec38-o).

X—Oven window (includes oven light on suffix "O").

T—One thermostatically controlled top burner (used with prefix "CP" only).

TT—Two thermostatically controlled top burners (used with prefix "CP" only).

Models comply with minimum requirements for domestic ranges which display the "CP" trade-mark.

The Bungalow type C Series, Models CPHC 4 & CPHC 4S is the same as Model CPHC 3 except as follows:

SUFFIXES:

S—Single duty top burners (immediately after No. iec4s-o).

6—Six top burners.

PREFIX:

9—Aluminum burner bowls and standard door handles.

The CPHC Series listed above for use with natural, manufactured, and mixed gases also are approved for use with propane.

INSPECTION AND TEST: All details of construction were examined by Ass't. Architect T. W. Farricker. The appliances have been approved by the American Gas Association. The report is on file with and is part of the record.

RECOMMENDATION: The Committee on Test recommends the approval of the appliance known as the Caloric Gas-fired Heating and Cooking Ranges, Models CPHC3, CPHC4 and CPH36 for use in New York City under the provisions of Article 12, Administrative Building Code and that the Caloric Gas-fired heater may be installed with the approved minimum clearances in inches from combustible construction in accordance with the test of the American Gas Association as stated on the tags affixed to the units.

In all cases however, adequate ventilation shall be provided for and clearances shall be sufficient to allow for proper servicing of the heaters. These heaters shall not be installed in garages or places of explosive atmosphere and each heater shall bear a label, permanently affixed reading "Approved by the Board of Standards and Appeals for use in New York City under Calendar Number 152-59-SA."

THE RESOLUTION—

WHEREAS, the report of a Committee on Test reads:
397-59-SA—Masda Corp. (Wholesale Distributors), Newark, New Jersey, filed for Mt. Vernon Furnace & Mfg. Co., June 17, 1959, for approval of the Vernois Gas Heater & Gas Range, Series 370, 380, 483, 672, 673, 674, 682, 683, 684 and 686 for use in New York City under the provisions of Article 12, Administrative Building Code.

USE: Bungalow Type Gas Heaters & Gas Ranges for cooking and heating.

MINUTES

DESCRIPTION: All Vernois Gas Heater & Gas Range Models have the appearance of conventional gas ranges and are equipped with fully insulated ovens, and top burners. In the section of the range that would normally be used for storage, there is installed a vented, thermostatically controlled gas heater. The combustion chamber, of the heater section, is die stamped from 20 gauge steel and is seam welded. The burner is made of cast iron with drilled ports. Automatic control of the burner is provided by the Robertshaw Unitrol which combines 100% safety valve and thermostat. Burner input ranges from 25,000 Btu to 35,000 Btu/hr. The body panels of the range are constructed of 20 gauge steel, finished in porcelain enamel and mounted on a heavy, sectional type steel frame. The oven has an 18,000 Btu/hr. input, is porcelain lined and equipped with a Robertshaw Thermostat. The top burners are cast iron, with removable aluminum caps, to provide instant flame control, and to facilitate cleaning.

The first numeral, in each series and model number, indicates the width of the range, i.e., 370 and 380 series ranges are 30" wide, 483 series ranges are 40" wide, 672 through 686 series ranges are 36" wide.

The Prefixes P, AP, TP and 8P, before a series and model number, indicates a model having optional equipment particularly in demand in the Northeastern section of the United States.

Suffixes after a series and model number indicates the following if these are not standard on a certain model:

SUFFIXES

- H—Range with Gas Heater as integral unit.
- R—Heater section on right side.
- A—Automatic Oven Ignition.
- G—Griddle installed in range top.
- D—Dual Top Burners with center-simmer settings.
- T—Thermal Eye Top Burner.
- W—Glass Window in Oven Door.
- KH—Kook-N-Heet.

The following models also approved:

Model Nos. P685HA and P685HAR: Same as Model Nos. 682H and 682HR, respectively, except the lampshade from the No. 672H is used and the flue box from the No. 672 is used.

Model Nos. P686HA and P686HAR—Same as Model Nos. P685HA and P685HAR, respectively, except it has single top duty burners and valves and no griddle.

Model Nos P686HGA and P686HGAR—Same as Model Nos. P686HA and P686HAR, respectively, except a griddle is employed.

All of the above ranges have automatic ignition in the oven. Also all models for use with Natural, Manufactured, Mixed and Liquified Petroleum gases.

INSPECTION AND TEST: All details of construction were examined by Ass't. Architect T. W. Farricker. The appliances have been approved by the American Gas Association. The report is on file with and is part of the record.

RECOMMENDATION: The Committee on Test recommends the approval of the appliance known as the Vernois Gas Heater and Gas Range, Series 370, 380, 483, 672, 673, 674, 682, 683, 684 and 686 for use in the New York City under the provisions of Article 12, of the Administrative Building Code and that the Vernois Gas Heater and Gas Range may be installed with the approved minimum clearances in inches from combustible construction in accordance with the test of the American Gas Association as stated on the tags affixed to the units.

THE RESOLUTION—

WHEREAS, the report of a Committee on Test reads:
449-59-SM—New Castle Products, Inc., New Castle, Indiana, filed June 7, 1959 for approval of Neowood, surface printed hard board door for use in New York City under the provisions of C26-191.0 and C26-667.5 of the Administrative Building Code.

USE: The door is a folding partition type door.

DESCRIPTION: The door is an accordian type door consisting of hard board panels suspended individually from an overboard track by nylon trolleys and steel hangers.

The individual hard board panels are connected one with another by flexible extruded opaque vinyl connectors. Metal clips at top and bottom secure connectors in panels. The hard board panels are one-quarter inch in thickness by approximately six inches wide and extend the full height of the door opening. The nylon trolleys run on a heavy steel overhead track which is fully concealed on both sides by mouldings that are finished to match door—no floor tracks are required, there are four nylon trolleys on the lead post, and two on each panel. Floating trolley hangars pivot inside panels as door is operated. Positive-acting latch is supplied with each door. Latch may be used to secure door to jamb casing, or to another door when two doors are installed as a pair. Can be converted to keep operated lock in the field, or may be ordered with lock from factory. Matching jamb moulding strip provided with each door provides seal between door and jamb casing. All "Neowood" doors are finished with a plastic film over the wood grain pattern. Doors are available in birch, mahogany, oak and walnut patterns, and in sizes up to 19'-4" wide by 9'-1" high for single units.

INSPECTION AND TEST: All details of construction were examined by Ass't. Architect T. W. Farricker.

RECOMMENDATION: The Committee recommends the approval of Neowood, surface painted hard board door for use in New York City when installed in accordance with this report and the requirements of C26-667.0.5 of the Administrative Building Code. The Committee further recommends that the "Neowood" surface painted hard board door can be used in buildings 150 feet in height or less as wood is not fireproof and that the material be stamped or labeled "Approved by the Board of Standards and Ap-

THE RESOLUTION—

WHEREAS, the report of a Committee on Test reads:

549-59-SA—Glenwood Range Company, Taunton, Massachusetts, filed August 26, 1959 for approval of Glenwood Bungalow Type Gas Ranges 36-961, 36-962, 36-963, 36-966, 36-967, 30-961 and 30-964 for use in New York City under the provisions of Article 12, Administrative Building Code, and the Multiple Dwelling Law and the Multiple Dwelling Code.

USE: A cooking range with built-in room heaters.

DESCRIPTION: These are domestic type gas cooking ranges with four top burners with baking oven and broiler below at the right side. On the left side below the top burner section is installed a combustion chamber for a gas fired room heater. This chamber is fully sealed by welded construction and finished in a heat resistant porcelain enamel. It is spaced from the walls of the surrounding compartment. The air to be heated is drawn in at the bottom of the compartment and circulates between the compartment walls and the combustion chamber. The heated air is discharged through a grille in the left wall. The final section of the combustion chamber projects beyond the backwall of the range giving additional heat surface. Attached to this section is a 4" flue connection collar with built-in draft diverter. A thermal switch is located below the draft diverter opening which operates through a magnetic safety valve to shut off the gas supply to the burners in case of a blocked flue.

The room heater is equipped with a porcelain enameled steel gas burner of the drilled port type. It has a maximum input of 35,000 Btu per hour. The room temperature is controlled by a Robertshaw Throttling type thermostat. The burner throttles between maximum input and a fixed bypass input of 8,000 Btu per hour. The burner is ignited from a constant burning pilot which operates a Robertshaw thermo magnetic pilot safety valve.

The heating section of the different models listed is the same, they vary in the cooking section as to accessories and also in the case of the 30-961 and 30-964 models the width of the range.

INSPECTION AND TEST: All data submitted was examined by Ass't. Engr. G. F. Sklenarik. These ranges were tested and approved by the AGA.

RECOMMENDATION: The Committee on Test recommends the approval of the Glenwood Bungalow Type Gas Ranges 36-961, 36-962, 36-963, 36-966, 36-967, 30-961 and 30-964 for use in New York City when installed in accordance with the provisions of Article 12, Administrative Building Code and the pertinent sections of the Multiple

Dwelling Code and Multiple Dwelling Law when applicable provided each range shall bear a label, permanently affixed, reading "Approved by the Board of Standards and Appeals for use in New York City under Calendar Number 549-59-SA."

WHEREAS, the decision of the Borough Superintendent, dated February 24, 1959 on Alt. Applic. 51/59 reads:

"1. Provide two legal means of egress for all tenants all floors (used for factory work) enclosed as req'd by Section 271 of the Labor Law and the Rules of Board of Standards and Appeals."

and

WHEREAS, the applicant states that the building is 25 feet by 75 feet in area, 5 stories, 58 feet high, of class 3 construction, located in unrestricted use, B area, class 2 height district, built prior to 1897, used since 1934 as follows: cellar—storage (photo mounts); 1st floor—storage (photo mounts); 2nd floor—factory, storage (photo mounts), 7 persons; 3rd floor—factory and storage (photo mounts), 2 persons; 4th floor—factory, office and storage (photo mounts), 3 persons; 5th floor—factory and storage (photo mounts), 3 persons; that no change in use is proposed; that the exits consist of one unenclosed stair 3 feet 2 inches wide of steel and cement tread construction; that the second means of egress is through a front fire escape with a counterbalanced stair to sidewalk; that the openings upon the fire escape are double hung metal sash with wire glass; that due to the arrangement of the stairs, and its location adjacent to the elevator, an enclosure constructed on the upper floors would extend some 10 or 11 feet out from the side wall; that the arrangement of floor space is such that this enclosure would impede the conduct of business on the premises to such an extent that it would be necessary for the occupant to give up possession of the building; that a proposal was made some months ago to extend Delancey

Street westward to east traffic flow from the Williamsburg Bridge; that the building under appeal lies directly in the path of any westward extension of Delancey Street and would have to be demolished if that street was extended; that in view of the low occupancy, the possible condemnation of the building and the hardship which would be imposed upon the occupant, it is respectfully requested that the appeal be granted for a temporary term of 5 years to permit the omission of the stair enclosure on the upper floor; and

WHEREAS, the premises and surrounding area were inspected by a committee of the Board and the committee recommended that the application should not be granted.

Resolved, that the decision of the Borough Superintendent, acting on Alt. App. 51/59, Objection No. One be and it hereby is affirmed and that the application be and it hereby is denied.

RULES

Fire Drill Rules, Adopted by the Board of Standards and Appeals, October 5, 1923

(593-23-SR)

DEFINITION OF "FIRE DRILL"

The method and practice of the systematic and orderly vacating of a building by its occupants in case of emergency, panic or fire in the least possible time—by the nearest safe means of exit—and the use of fire appliances which shall be provided for the extinguishing or retarding of fire and the safeguarding of human life.

Rule 1.

In all buildings as defined in Article 1, Section 10 of the Labor Law in which fire drills are required pursuant to Section 279 thereof and in any other building in which such drills are required by the Fire Commissioner pursuant to the power conferred in section 491 of the New York City Charter, it shall be the duty of the owners, lessees or tenants to conduct fire drills monthly and at such other times as the Fire Commissioner may direct.

For the purpose of conducting such fire drills the owner or tenants shall appoint from among their employees such responsible and dependable persons, male or female, who shall efficiently perform the duties of the various positions of the fire drill organization, as specified on the accompanying chart.

It shall be the duty of the owner or tenant to enter in the blank spaces provided for that purpose in said chart the names of persons so selected and post said chart and copies of the rules in a conspicuous place.

Rule 2. Duties of Foreman.

The Foreman or Person in Charge shall direct, enforce and have full charge of the "Fire Drill" in every factory on each floor. Each day before work is begun he shall see that extinguishers, fire hose, fire buckets, etc., are in readiness for use, exit doors are unlocked, aisles are free from obstruction, that stairways, halls, etc., are properly lighted, and shall remedy any dangerous condition found to exist. Immediately after work is commenced he shall check up the Fire Drill Organization list and note if the regularly assigned persons are present; if any are found to be absent, he shall assign other employees (if practicable) to perform their duties.

He shall immediately notify new employees of the existence of the Fire Drill Organization and give them the necessary instructions as to the duties they are to perform, etc.

He shall be familiar with the operation and location of the interior alarm signal box on his floor.

He shall listen for the test signal each morning at the appointed hour and in the event of the test signal not being heard he shall communicate with the superintendent or other person in charge of the building and advise him of the fact. The (Floor Captain's) Foreman's orders are final as to the carrying out of the fire drill on his particular floor.

Rule 3. Duties of Watchmen.

The WATCHMEN shall see that all doors and windows are closed so as to prevent the spread of fire. The WATCHMEN shall be the only persons permitted to remain on the floor during the progress of a fire drill and do so at their own risk. For ordinary purposes only one watchman and a substitute shall be designated. In special cases, however, extra watchmen may be assigned by consent in writing from Fire Commissioner.

RULES

Rule 4. Duties of Searchers.

The MALE AND FEMALE SEARCHERS shall search all toilets, dressing rooms and emergency rooms used and frequented by their sex and all other portions of the floor and order all persons, except those authorized to remain, to leave the premises. They are to take care of and assist all persons who may faint or be disabled.

SEARCHERS shall leave the floor immediately after the last squad leaves.

Rule 5. Duties of Street Alarm Box Runner.

The STREET-ALARM-BOX-RUNNER shall be familiar with the location of the nearest city fire alarm box and know how it is operated.

In ordinary practice fire drills the STREET-ALARM-BOX-RUNNER shall report to the Foreman for orders, and if his services are not required he shall promptly file out of the premises with the other occupants.

Only when a fire actually occurs on his floor, or when ordered to do so by the Foreman, shall the STREET-ALARM-BOX-RUNNER proceed to the street alarm box and send in the fire alarm.

Rule 6. Duties of Fire Brigade.

The fire brigade shall have full charge of the operation of all auxiliary fire fighting apparatus and shall endeavor to extinguish, or at least hold in check until the arrival of the Fire Department, any fire that may occur. When it is necessary for the fire brigade to respond to different floors in the building they shall not use the stairways or fire escapes while the occupants are escaping from the premises.

Rule 7. Duties of Exit Guards.

The EXIT GUARDS shall station themselves at all exit doors leading to fire escapes, stairways, and other means of escape immediately upon the sounding of the alarm. There shall be two guards for each exit, if practicable; one to stand in the hallway holding back the door and the other directly inside on the floor. They are to keep the exit doors open and direct the movements of the persons using these exits and prevent congestion.

EXIT GUARDS shall remain at their stations until all of the occupants of the building have passed their station. Then close their doors and pass out of the building. Upon signal for the occupants to return, EXIT GUARDS shall take their designated stations and remain there until all persons have returned to their respective floors.

Rule 8. Duties of Squad Monitors.

The SQUAD MONITORS, as soon as the alarm is sounded, shall see that the employees under their charge quickly form into line, two abreast, and numbering not more than thirty to each squad. They shall see that all aisles and passageways are cleared of obstructions.

Note: Chairs, stools, baskets, etc., should be pushed under or placed on top of work benches.

MONITORS shall proceed at the head of their respective squads to the exit assigned, and then march up or down the stairs or to other exits as directed by the EXIT GUARDS.

On reaching the sidewalk MONITORS shall keep their squads in order and lead them a reasonable distance from the building, so as not to cause congestion and interference with fire apparatus. When the proper signal is given they shall return to their respective floors at head of their squads.

MONITORS will at all times see that those under their charge conduct themselves in a respectable and orderly manner.

Rule 9. Holding of Drills.

FIRE DRILLS shall be held at least once each month at varied hours of the day, and all of the occupants shall participate therein simultaneously. Such drills shall conduct all occupants to a place of safety.

Where dual operation interior fire alarm systems are installed as permitted under Rule 10.1 of the interior fire alarm rules of the Board of Standards and Appeals, the fire drill conducted each month shall include all of the persons on the premises engaged at work for a factory, and drills shall be conducted at least twice, each year in which all of the persons on the premises shall participate simultaneously.

Rule 10. Duties of Owner.

It shall be the duty of the OWNER, LESSEE OR TENANT OF THE BUILDING or his authorized agent or their representatives to personally observe that the "Fire Drill" is held simultaneously on every floor of the building and the participation therein of every occupant of such building. Any FIRE DRILL in which all of the occupants do not participate shall not be considered as complying with the LAW, except as otherwise provided in these rules.

The person or persons representing the OWNERS, LESSEE OR TENANT, who supervises the FIRE DRILL at the building shall submit to an examination by the Division of Fire Prevention as to their experience and general fitness for such duties, and shall be so certified in writing by the FIRE COMMISSIONER.

It shall be the duty of the ENGINEER, SUPERINTENDENT or other PERSON IN CHARGE of a building having an interior fire alarm system to test such system daily immediately after the beginning of business, and to see that all apparatus operated by springs, requiring winding are rewound after each alarm and kept in normal condition for operation.

Rule 11. Duties of Engineer.

Whenever it is necessary to test the fire alarm system at any other time of the day, owing to repairs, etc., being made, the PERSON IN CHARGE OF BUILDING will first notify all Foremen of the several floors of the intended test and likewise notify them when the repairs, etc. are completed. This precaution is taken to prevent confusion and excitement, also misunderstanding of the alarm signals.

It shall also be the duty of the PERSON IN CHARGE OF BUILDING to sound the interior alarm system at irregular intervals, but not less than once each calendar month, for the purpose of holding practice fire drills. He shall keep on the premises a record of such drills, showing the date when held and the required time for all occupants to reach the street or a point of safety outside the building.

The PERSON IN CHARGE OF BUILDING must immediately acquaint new tenants of the existence of the "Fire Drill" Organization and its purport.

Rule 12. Registration.

The name and address of every person, corporation or co-partnership, that will, under professional service, carry on the trade, business or calling of establishing, maintaining or supervising the "Fire Drill" shall be registered in the Fire Department, which Department shall, upon evidence of fitness, grant a certificate to that effect.

NOTICE

APPEALS AS TO MULTIPLE DWELLINGS

The Legislature, under Chapter 333 of 1948, has clarified Section 60 of the Multiple Dwelling Law by describing the agency authorized to grant variances under this Section, so as clearly to mean in New York City—the Board of Standards and Appeals.

Chapter 508 of 1948 has also been adopted by the Legislature, amending the Multiple Dwelling Law to provide, under new Section 310, for a Board of Appeals. By description the Board of Appeals means in New York City—the Board of Standards and Appeals. Section 310 is further amended by Chapter 805 of 1959 and provides as follows as to appeals:

LAWS OF NEW YORK—By Authority

Chapter 508 of 1948

§ 310. Board of appeals. 1. As used in this section "board" shall mean the agency of a city constituted as a board and authorized by law both to grant variances of the zoning resolution and to make rules supplemental to laws regulating construction, maintenance, use and area of buildings.

2. Where the compliance with the strict letter of this chapter causes any practical difficulties or any unnecessary hardships the board shall have the power, on satisfactory proof at a public hearing, provided the spirit and intent of this chapter are maintained and public health, safety and welfare preserved, and substantial justice done, to vary or modify any provision or requirement of this chapter, or any rule, regulation, supplementary regulation, ruling or order of the department with respect to the provisions of this chapter, as follows:

a. For multiple dwellings and buildings existing on July first, nineteen hundred forty-eight, provisions relating to:

- (1) Height and bulk;
- (2) Required open spaces;
- (3) Minimum dimensions of yards or courts;
- (4) Means of egress; or
- (5) Basements and cellars in dwellings erected on or after April twelfth, nineteen hundred one.

b. For multiple dwellings and buildings erected or to be erected after July first, nineteen hundred forty-eight, and such dwellings thereafter altered or to be altered, provisions relating to:

- (1) Required open spaces; or
- (2) Minimum dimensions of yards or courts.

Variations or modifications may be granted pursuant to this paragraph b only on condition that open areas for light and air are provided which are at least equivalent in area to those required by the applicable provisions of this chapter.

3. An application for such a variance or modification may be made by any person aggrieved or by the head of any public agency, within such time and under such procedure, conditions and rules as may be prescribed by the board. The board shall fix a reasonable time for the hearing of an application and shall require that due notice be given of the time and place of such hearing to the applicant and to the department. Any person or a duly authorized representative of any public agency may appear at any such hearing and be heard on any such application.

4. In every case the board shall state the reason or reasons for its decision. All decisions of the board shall be subject to review in the same manner as is provided by law for review of decisions of such board respecting variances of the zoning resolution.

5. A record of all decisions of the board, indexed according to the section or sections of this chapter affected thereby, shall be kept in the office of the board. Such record shall be open to public inspection at all times during business hours.

Fire Drill Rules.

Notice of Appeals as to Multiple Dwellings.

COURT DECISIONS

Matter of N. Y. Life Ins. Co. vs. Murdock:—On November 19, 1957, the Board granted an extension of the term of variance for five years under Section 7, subdivision c, of the Resolution adopted by the Board on March 6, 1956, which was granted by the Board under Section 7a, 7c and 21 of the Zoning Resolution, to permit in a residential use district the change of use from residence to commercial use and other parts of the combined structure from one commercial use to another commercial use; Calendar Number 576-37-BZ, Vol. II; Premises 215-221 East 64th Street, north side, 230 feet east of Third Avenue, Borough of Manhattan.

At Special Term, Supreme Court, Mr. Justice Klein remanded the matter to the Board to make findings of fact as to an extension for a further term of five years. Upon the new hearing, notices are to be sent to the owners within the area of notification. (New York Law Journal, December 8, 1958, page 12).

On March 6, 1956, the Board after exhaustive hearing and report granted a variance under Section 7c for a term of two years, the short term being purposely selected for the reasons as stated in the report. The Board had in mind a longer term after it was ascertained that the violations had been taken care of and dismissed and a Certificate of Occupancy issued.

At the Appellate Division—Supreme Court—First Department, Matter of N. Y. Life Ins. Co., pet-ap-res (Murdock, res-res-ap; B. J. Denihan, Inc., res-ap)—Final order so appealed from, in all things, unanimously affirmed, without costs. Opinion by McNally, J. Order filed. (New York Law Journal, June 12, 1959, page 9).

At the Court of Appeals, N. Y. Life Ins. Co., ap-res, v. Murdock, res-ap (B. J. Denihan, Inc. intervenors-ap-res)—Motion by intervenors—appellants—respondents for leave to appeal denied. Motion by the respondents—appellants for leave to appeal denied. (New York Law Journal, October 14, 1959, page 14).

* * * * *

Matter of Faith for Today, Inc. vs. Murdock, et al:—On March 10, 1959 the Board denied their appeal from a decision of the Borough Superintendent; Calendar Number 559-58-A; Premises 108-43 71st Avenue, north side, 100 feet west of 110th Street, Block 2223, Lot 44, Forest Hills, Borough of Queens.

At Special Term, Supreme Court, Part I, Mr. Justice Margett sustained the Board and dismissed the petition. (New York Law Journal, November 23, 1959, page 14).

620-39-SM

APPLICANT—U. S. Gypsum Company, owner—additional sheathing.

APPEARANCES—

For Applicant: W. W. Bainbridge.

ACTION OF BOARD—Application reopened and Resolution amended in accordance with the report and recommendation of Committee on Test.

THE VOTE—

Affirmative: Chairman Foley, Vice Chairman Kleinert,

Commissioner Fox and Commissioner Becker 4

Negative: 0

Absent: Commissioner Sleeper 1

THE RESOLUTION—

WHEREAS, the report of a Committee on Test reads: 620-39-SM—Amendment to resolution as to additional sheathing and method of attachment.

U. S. Gypsum Co., requested that the resolution adopted April 22, 1941 and amended at various times through July 17, 1956 under Calendar Number 620-39-SM be reopened and amended so as to include additional sheathing and methods of attachment.

USE: Exterior sheathing board.

DESCRIPTION: The gypsum sheathing board is manufactured of the same materials and in the same manner as the board previously approved. The requested boards are of a different size, ranging in width from 2'-0" to 4'-0" and in height up to 14'-0" and thickness ranging from ½" to 2" and having either square, rounded V type tongue and groove square leveled or recessed edges. The board is also furnished either with or without aluminum foil on one face in addition to the water repellant paper surface and with or without the water repellant core.

INSPECTION AND TEST: Racking tests were conducted on two panels, one panel having the sheathing nailed to the studs and the other panel having the sheathing stapled. Both panels were constructed without corner bracing of the frame. In both tests the panels withstood a 6000 lb. thrust. The complete reports are on file with and is part of the record.

RECOMMENDATION: The Committee recommends that the resolution adopted April 22, 1941 and amended through July 17, 1956 under Calendar Number 620-39-SM be re-

MINUTES

opened and amended so as to include additional sizes of U.S. Gypsum sheathing as herein described, on condition that when the sheathing is stapled or nailed it shall be limited to $\frac{1}{2}$ " in thickness, the staple shall be $1\frac{1}{2}$ " long, $\frac{7}{16}$ " crown 16 gauge galvanized divergent point staples and spaced 3" on centers on the perimeter of the sheathing and 6" on center on intermediate studs and when nailed, the nails shall be 11 gauge galvanized roofing nails $1\frac{1}{4}$ " long with $\frac{7}{16}$ " head and spaced 4" on center on the perimeter and 8" on center on the intermediate studs. The Committee further recommends that this construction may be used without corner bracing but in all other respects the requirements of the resolution adopted April 22, 1941 under Calendar Number 620-39-SM shall be complied with. It is further recommended that the sheathing without the foil and without the asphalted core may be marketed under the trade name of U.S.G. Gyp-lap Sheathing and when the sheathing has the foil it shall be known as U.S.G. Double Duty Sheathing-Foil.

THE RESOLUTION:

WHEREAS, the report of a Committee on Test reads:
690-47-SM—Amendment to resolution as to additional size block.

Bayonne Block Co., requested by letter dated February 3, 1959 that the resolution adopted December 9, 1947 be amended so as to include additional size masonry units. The application was reopened February 25, 1959.

USE: Masonry Units—Concrete, Cinder and Aglite Aggregate.

DESCRIPTION: The masonry units are manufactured in the applicants plant, Bayonne, New Jersey, on the same equipment used in the manufacture of the previously approved. The aggregate used in the requested block is either cinders, concrete or aglite.

INSPECTION AND TEST: Samples of the blocks were tested at Jersey Testing Laboratories, Inc., in accordance with the requirements of the Masonry Rules of the Board. Five samples of each requested size were tested in both compression and absorption:

AGLITE BLOCK

Hollow—4" x 8" x 18", 6" x 8" x 18", 8" x 8" x 18",
8" x 12" x 18" and 8" x 18" header.

CINDER BLOCK

Hollow—3" x 8" x 18", 4" x 8" x 18", 6" x 8" x 18",
8" x 8" x 18", 8" x 10" x 18", 8" x 12" x 18",
8" x 12" x 16", 8" x 18" header, 9" x 18" header.

SOLID CINDER—4" x 8" x 18", 6" x 8" x 18".

CONCRETE—Hollow—4" x 8" x 18", 6" x 8" x 18",
8" x 8" x 16", 8" x 10" x 18", 8" x 12" x 16".

All blocks met the requirements and the complete report is on file with and is part of the record.

RECOMMENDATION: The Committee on Test recom-

mends that the resolution adopted December 9, 1947 under Calendar Number 690-47-SM be amended so as to include the additional size masonry units as herein described, on condition that the requirements of the resolution adopted December 9, 1947 under Calendar Number 690-47-SM be complied with.

470-49-SM

APPLICANT—Otis Elevator Company, owner—amendment, additional facing on door and construction along top edge.

APPEARANCES—

For Applicant: Saverio Bentivegna.

ACTION OF BOARD—Resolution amended in accordance with the report and recommendation of Committee on Test.

THE VOTE—

Affirmative: Chairman Foley, Vice Chairman Kleinert,
Commissioner Fox and Commissioner Becker 4
Negative: 0
Absent: Commissioner Sleeper 1

THE RESOLUTION—

WHEREAS, the report of a Committee on Test reads:
470-49-SM—Amendment to resolution as to additional facing on door and construction along top edge.

Otis Elevator Company, New York, requested by letter dated February 24, 1956 that the resolution adopted November 15, 1949 under Calendar Number 470-49-SM be amended so as to include additional construction and facia. The application was reopened March 20, 1956.

USE: Swing and Slide Elevator Doors.

DESCRIPTION: The additional method may best be described by comparing the present method and the proposed method.

PRESENT METHOD—At the top of each sliding type door, a 16 gauge channel reinforcement is spot welded between the two faces of the door section across the full width of the door. Two (2) $\frac{1}{2}$ " thick hanger reinforcing plates with tapped holes for attachment of sheave type hangers, are spot welded under the top channel and steel fillers with corresponding clearance holes, are attached above this top channel to act as flat surfaces on which the hanger sheave brackets are mounted.

PROPOSED METHOD—A $\frac{1}{8}$ " thick steel "U" shaped bracket substantially the full width of the door is set into the door and arc welded to the top edge of each door face. The welds are 1" long and spaced on no more than 4" centers. One leg of this bracket extends above the door to provide a support for hanger rollers using $\frac{1}{2}$ " steel mounting bolts.

Drawings marked "Rec'd. October 29, 1959" which are on file with the record, show the two methods.

The additional request is for a door with a stainless steel face on the corridor side and the balance of the door remaining the same. The stainless steel is known as Type 430 which has a coefficient of expansion of 6.3×10^{-6} as compared to mild steel having a coefficient of 6.36×10^{-6} .

Drawing marked "Rec'd. February 27, 1956" which are on file with and are part of the record, show the method of construction.

RECOMMENDATION: The Committee on Test recommends that the resolution adopted November 15, 1949 under Calendar Number 470-49-SM be amended so as to the additional type of construction along the top edge of the door and the permission to substitute a stainless steel face for a mild steel on the approved hollow metal door, on condition

THE RESOLUTION—

WHEREAS, the report of a Committee on Test reads: 844-55-SM—Gustin Bacon Mfg. Co., Kansas City, Mo., filed October 11, 1955 for approval of Ultralite and Ultrafine Insulation, Snap-On Pipe insulation under the provisions of C26-88.0 and C26-191.0 Administrative Building Code. The application was on the dismissal list July 7, 1959 but was removed at the request of the applicant.

USE: Thermal and Acoustical Insulating Material.

DESCRIPTION: Ultrafine is a glass fiber insulation made from blown glass fibers and is made in a variety of thicknesses, densities and roll widths.

Ultralite is made from a pure calcium borosilicate glass and contains a maximum of 3% sodium and potassium oxides and the long drain fibers are bonded together with a thermo setting resin.

Snap-On pipe insulation is composed of fine diameter blown glass fibers bonded together with a phenolic resin and molded in one piece sections.

INSPECTION AND TEST: The material was tested at Midwest Research Institute and was found to be incombustible. The complete report is on file with and is part of the record.

RECOMMENDATION: The Committee on Test recommends the approval of the material of Ultralite and Ultrafine Insulation and Snap-On Pipe Insulation for use in New York City as an incombustible acoustical insulation with an approved type of support and as insulation on piping under C26-711.0.6.3.6 Administrative Building Code but in no instance shall the insulation be used in locations where the temperature on the heated surface exceeds 425°F as the binding agent carbonizes at temperatures in excess of 425°F

720-56-SA—Amendment to resolution as to additional size of gas fired boiler.

Burnham Corp., Irvington, New York, requested that the resolution adopted April 2, 1957 and amended through October 28, 1958 under Calendar Number 720-56-SA be reopened and amended to include an additional model of gas fired boiler.

USE: Gas fired heating boiler.

DESCRIPTION: The requested boiler Series 61 is similar to the Series 60, previously approved, differing as to BTU capacity and jacket styling. The Series 61 has been approved by the American Gas Association.

RECOMMENDATION: The Committee recommends that the resolution adopted April 2, 1957, under Calendar Number 720-56-SA be reopened and amended so as to include the additional Burnham Gas Fired Boiler Series 61, on condition that the requirements of the resolution adopted April 2, 1957, under Calendar Number 720-56-SA be complied with.

448-57-SM—Ever-Tite Coupling Co., Inc., New York, N. Y., filed June 16, 1957 for approval of the Ever-Tite F-397-A

Adapter and the Ever-Tite 197-LC Cap for use in New York City.

USE: A quick connecting coupling and cover cap for installation in gasoline fill boxes.

DESCRIPTION: The Ever-Tite Adapter and Cap are designed to replace the threaded adapter used in existing approved type gasoline fill boxes.

Both adapter and cap are made of brass and the adapter is secured to the fill box body by a flange connection with gasket designed to fit the original threaded openings in the fill box body. The cap is provided with a synthetic gasket and closes over the adapter by means of the cam action of a locking handle. Provision is made to lock this cap with a small padlock.

INSPECTION AND TEST: A sample unit was examined at the offices of the Board by Asst. Engr. G. F. Sklenarik.

RECOMMENDATION: The Committee on Test does not recommend the approval of the Ever-Tite F-397-A Adapter and 197-LC Cap for installation in approved gasoline fill boxes for the reason that the original outer cover of the fill box which carries the manufacturer's name and identification number will not fit the fill box after installation of the Ever-Tite Adapter and Cap and would be replaced by one of the applicant's own make.

The Committee therefore recommends that the application be disapproved or withdrawn.

682-58-SM—Insuro Chemical Co., Inc., West Upton, Mass., filed November 25, 1958 for approval of Insuro under the provisions of C26-191.0 Administrative Building Code.

USE: An admixture to concrete and cement mortars.

DESCRIPTION: The material is a liquid chemical emulsion, the constituent parts of which are of proprietary nature and therefore the formula has been placed in a sealed envelope and placed in the Board's Safe, so that the constituent parts of the formula will not be disclosed but can be checked at any time, if necessary.

INSPECTION AND TEST: Tests were conducted on different design mixes using a mix without Insuro and a companion mix with Insuro added. The tests were conducted by Haller Testing, Thompson & Lichtner Co., Inc., and other laboratories and in all instances the concrete with Insuro added showed higher strength. The complete reports are on file and are part of the record.

RECOMMENDATION: The Committee on Test recommends the approval of the material Insuro as an admixture to concrete or cement mortar, on condition the cement content shall not be reduced, that the amount of Insuro added shall not exceed 1 quart of Insuro to 4¼ gallons of water and that each container in which the material is marked shall be labeled "Approved by the Board of Standards and Appeals for use in New York City under Calendar Number 682-58-SM."

223-59-SM—Field Control Div. of H. D. Conkey & Co., Mendota, Illinois, filed April 2, 1959 for approval of Field Type M + MG2 Draft Control on Gas, Coal or Oil Fired Boilers and Furnaces for use in New York City under the provisions of C26-696 of the Administrative Building Code.

USE: A device for regulating combustion draft and for relieving down draft.

DESCRIPTION: The Field Type M + MG2 is a barometric draft control of the balanced gate type. It is designed to accurately control draft in the breeching and over the fire on heating or processing equipment fired by gas, oil or solid fuel. It incorporates a double acting gate that is balanced on stainless steel bearings and consist of a stainless steel knife edge resting on a self aligning stainless steel bearing plate. The upper segment of the gate is provided with an adjustable weight, factory set, for proper balance. For up draft control purposes, an adjustment weight linkage and adjustment weights are provided for final adjustment of up draft conditions at the time of installation. The lower segment of the gate swings inwardly for up draft control and acts against the adjustment weight and linkage. In down draft conditions the gate swings outwardly to relieve the pressure and in that case the adjustment weight and linkage are inoperative.

The gate assembly is secured to a heavy galvanized collar which is attached to the breaching or flue. The collar is

MINUTES

of sufficient length so that the gate will not extend into the flue passage.

The Field Type M + MG2 Draft Control is available with a mercury switch mounted on the regulator and a time delay relay. If for any reason, such as excessive down draft or a blocked flue causing the movement of the regulator gate, the switch will shut-off the gas burner after a suitable time delay. Momentary puffs will not cause shut-off of the burner because of the time delay relay.

The Field Type M + MG2 Draft Controls are made in sizes varying from 10 inches to 32 inches. They are to be installed into the side of a flue pipe or breaching or in such a manner that the flue gases will not flow directly into the draft control collar against the gate.

INSPECTION AND TEST: All details of construction were examined by Ass't. Architect T. W. Farricker. This control was approved by Underwriters' Laboratories under MP1275.

RECOMMENDATION: The Committee on Test recommends the approval of the Field Type M + MG2 Draft Control for use with Gas, Coal or Oil Fired Boilers and Furnaces when such draft control is installed in accordance with report and the manufacturer's recommendations and provided that each such draft control shall bear a label, permanently affixed, reading "Approved by the Board of Standards and Appeals for use in New York City under Calendar Number 223-59-SM."

THE RESOLUTION—

WHEREAS, the report of a Committee on Test reads:
386-59-SA—Carleton Stuart Corp., for Carrier Corp., Syracuse, N. Y., filed June 15, 1959 for approval of the Carrier 41E Weathermaker for use in New York City under the provisions of C26-191.0 and Article 18, chapter 19, Administrative Code.

USE: Water cooled air conditioning units.

DESCRIPTION: The 41E Series Carrier Weathermakers are package units, factory assembled, made up of field serviceable sealed compressors, water cooled condensers, evaporator coils and the required controls and piping. These units are designed for duct systems and the fan section may be arranged for either vertical or horizontal air discharge. These units may also be used for year-round conditioning by the installation of heating coils in the evaporator section.

The 41E Series are made in two capacities designated as the 41E28 and 41E34. Both the 41E28 and 41E34 models contain two separate refrigerating systems each protected by means of a fusible plug. Compressor motors used in the two systems in the 41E28 model are 10 HP and 15 HP with total refrigerant charge of 41 lbs. of F-22. Compressor motors used in the two systems in the 41E34 models are 15 HP each with total refrigerant charge of 48 lbs. of F-22. Cooling capacity of the 41E28 models is a nominal 25 tons and of the 41E34 models a nominal 30 tons.

INSPECTION AND TEST: All details were examined by Ass't. Engr. G. F. Sklenarik.

RECOMMENDATION: The Committee on Test recommends the approval of the Carrier 41E Weathermakers for use in New York City under the provisions of C-26-191.0 and Article 18, Chapter 19, Administrative Code and when installed in accordance with the requirements of the Dep't. of W.S.G. & E. provided that each unit shall bear a label, permanently affixed, reading "Approved by the Board of Standards and Appeals for use in New York City under Calendar Number 386-59-SA."

THE RESOLUTION—

WHEREAS, the report of a Committee on Test reads:

451-59-SA—Sun-Rey Engineering Co., Grand Rapids, Michigan, filed July 7, 1959 for approval of Sun-Rey, gas-fired, infra-red, overhead radiant heater, Models 2-600, 2-600S; 3-600, and 3-600S for use in New York City under the provisions of Article 12, Administrative Building Code.

USE: Overhead heating appliance for industrial and commercial application.

DESCRIPTION: The heater is a space heater so designed to be hung overhead in a horizontal plane; when installed the heater must be set at least 66" above any combustible material due to the downward reflection of the heat. The heater consists of a porcelain coated reflection heavy gauge steel hood and a cast iron burner housing head with drilled ceramic ports. This head is the basic part of the heater and there are eight heads to the basic unit. This ceramic is designed for #56 OMS, approximately 180 holes per in. for natural, mixed and propane gases and for #66 or 67 OMS, approximately 264 holes per in. for manufactured gas, and each hole acts as a gas burner.

The appliance is equipped with Sun-Rey controls positive action and 100% safety shut-off. In the event of fuel interruption, or power failure, or for any reason should the automatic pilot be extinguished, these controls provide positive safety.

INSPECTION AND TEST: All details of construction were examined by Ass't. Architect T. W. Farricker. The appliances have been approved by the American Gas Association under Certificate Numbers 2-(1647.0 & .1).001, 2-(1647-1.0 & -1.1).001. The report is on file with and is part of the record.

RECOMMENDATION: The Committee on Test recommends the approval of the appliances known as Sun-Rey, gas-fired, infra-red, overhead radiant heater, Models 2-600, 2-600S; 3-600 and 3-600S for use in New York City under the provisions of Article 12 of the Administrative Building Code and that the Sun-Rey radiant heaters may be installed with the approved minimum reduced clearances in inches from combustible construction in accordance with the test of the American Gas Association as stated on the tags affixed to the units.

In all cases, however, adequate ventilation shall be pro-

vided for and clearances shall be sufficient to allow for proper servicing of the heaters. These heaters shall not be installed in garages or places of explosive atmosphere and each heater shall bear a label, permanently affixed, reading "Approved by the Board of Standards and Appeals for use in New York City under Calendar Number 451-59-SA."

RULES

Fire Drill Rules, Adopted by the Board of Standards and Appeals, October 5, 1923

(593-23-SR)

DEFINITION OF "FIRE DRILL"

The method and practice of the systematic and orderly vacating of a building by its occupants in case of emergency, panic or fire in the least possible time—by the nearest safe means of exit—and the use of fire appliances which shall be provided for the extinguishing or retarding of fire and the safeguarding of human life.

Rule 1.

In all buildings as defined in Article 1, Section 10 of the Labor Law in which fire drills are required pursuant to Section 279 thereof and in any other building in which such drills are required by the Fire Commissioner pursuant to the power conferred in section 491 of the New York City Charter, it shall be the duty of the owners, lessees or tenants to conduct fire drills monthly and at such other times as the Fire Commissioner may direct.

For the purpose of conducting such fire drills the owner or tenants shall appoint from among their employees such responsible and dependable persons, male or female, who shall efficiently perform the duties of the various positions of the fire drill organization, as specified on the accompanying chart.

It shall be the duty of the owner or tenant to enter in the blank spaces provided for that purpose in said chart the names of persons so selected and post said chart and copies of the rules in a conspicuous place.

Rule 2. Duties of Foreman.

The Foreman or Person in Charge shall direct, enforce and have full charge of the "Fire Drill" in every factory on each floor. Each day before work is begun he shall see that extinguishers, fire hose, fire buckets, etc., are in readiness for use, exit doors are unlocked, aisles are free from obstruction, that stairways, halls, etc., are properly lighted, and shall remedy any dangerous condition found to exist. Immediately after work is commenced he shall check up the Fire Drill Organization list and note if the regularly assigned persons are present; if any are found to be absent, he shall assign other employees (if practicable) to perform their duties.

He shall immediately notify new employees of the existence of the Fire Drill Organization and give them the necessary instructions as to the duties they are to perform, etc.

He shall be familiar with the operation and location of the interior alarm signal box on his floor.

He shall listen for the test signal each morning at the appointed hour and in the event of the test signal not being heard he shall communicate with the superintendent or other person in charge of the building and advise him of the fact. The (Floor Captain's) Foreman's orders are final as to the carrying out of the fire drill on his particular floor.

Rule 3. Duties of Watchmen.

The WATCHMEN shall see that all doors and windows are closed so as to prevent the spread of fire. The WATCHMEN shall be the only persons permitted to remain on the floor during the progress of a fire drill and do so at their own risk. For ordinary purposes only one watchman and a substitute shall be designated. In special cases, however, extra watchmen may be assigned by consent in writing from Fire Commissioner.

RULES

Rule 4. Duties of Searchers.

The MALE AND FEMALE SEARCHERS shall search all toilets, dressing rooms and emergency rooms used and frequented by their sex and all other portions of the floor and order all persons, except those authorized to remain, to leave the premises. They are to take care of and assist all persons who may faint or be disabled.

SEARCHERS shall leave the floor immediately after the last squad leaves.

Rule 5. Duties of Street Alarm Box Runner.

The STREET-ALARM-BOX-RUNNER shall be familiar with the location of the nearest city fire alarm box and know how it is operated.

In ordinary practice fire drills the STREET-ALARM-BOX-RUNNER shall report to the Foreman for orders, and if his services are not required he shall promptly file out of the premises with the other occupants.

Only when a fire actually occurs on his floor, or when ordered to do so by the Foreman, shall the STREET-ALARM-BOX-RUNNER proceed to the street alarm box and send in the fire alarm.

Rule 6. Duties of Fire Brigade.

The fire brigade shall have full charge of the operation of all auxiliary fire fighting apparatus and shall endeavor to extinguish, or at least hold in check until the arrival of the Fire Department, any fire that may occur. When it is necessary for the fire brigade to respond to different floors in the building they shall not use the stairways or fire escapes while the occupants are escaping from the premises.

Rule 7. Duties of Exit Guards.

The EXIT GUARDS shall station themselves at all exit doors leading to fire escapes, stairways, and other means of escape immediately upon the sounding of the alarm. There shall be two guards for each exit, if practicable; one to stand in the hallway holding back the door and the other directly inside on the floor. They are to keep the exit doors open and direct the movements of the persons using these exits and prevent congestion.

EXIT GUARDS shall remain at their stations until all of the occupants of the building have passed their station. Then close their doors and pass out of the building. Upon signal for the occupants to return, EXIT GUARDS shall take their designated stations and remain there until all persons have returned to their respective floors.

Rule 8. Duties of Squad Monitors.

The SQUAD MONITORS, as soon as the alarm is sounded, shall see that the employees under their charge quickly form into line, two abreast, and numbering not more than thirty to each squad. They shall see that all aisles and passageways are cleared of obstructions.

Note: Chairs, stools, baskets, etc., should be pushed under or placed on top of work benches.

MONITORS shall proceed at the head of their respective squads to the exit assigned, and then march up or down the stairs or to other exits as directed by the EXIT GUARDS.

On reaching the sidewalk MONITORS shall keep their squads in order and lead them a reasonable distance from the building, so as not to cause congestion and interference with fire apparatus. When the proper signal is given they shall return to their respective floors at head of their squads.

MONITORS will at all times see that those under their charge conduct themselves in a respectable and orderly manner.

Rule 9. Holding of Drills.

FIRE DRILLS shall be held at least once each month at varied hours of the day, and all of the occupants shall participate therein simultaneously. Such drills shall conduct all occupants to a place of safety.

Where dual operation interior fire alarm systems are installed as permitted under Rule 10.1 of the interior fire alarm rules of the Board of Standards and Appeals, the fire drill conducted each month shall include all of the persons on the premises engaged at work for a factory, and drills shall be conducted at least twice, each year in which all of the persons on the premises shall participate simultaneously.

Rule 10. Duties of Owner.

It shall be the duty of the OWNER, LESSEE OR TENANT OF THE BUILDING or his authorized agent or their representatives to personally observe that the "Fire Drill" is held simultaneously on every floor of the building and the participation therein of every occupant of such building. Any FIRE DRILL in which all of the occupants do not participate shall not be considered as complying with the LAW, except as otherwise provided in these rules.

The person or persons representing the OWNERS, LESSEE OR TENANT, who supervises the FIRE DRILL at the building shall submit to an examination by the Division of Fire Prevention as to their experience and general fitness for such duties, and shall be so certified in writing by the FIRE COMMISSIONER.

It shall be the duty of the ENGINEER, SUPERINTENDENT or other PERSON IN CHARGE of a building having an interior fire alarm system to test such system daily immediately after the beginning of business, and to see that all apparatus operated by springs, requiring winding are rewound after each alarm and kept in normal condition for operation.

Rule 11. Duties of Engineer.

Whenever it is necessary to test the fire alarm system at any other time of the day, owing to repairs, etc., being made, the PERSON IN CHARGE OF BUILDING will first notify all Foremen of the several floors of the intended test and likewise notify them when the repairs, etc. are completed. This precaution is taken to prevent confusion and excitement, also misunderstanding of the alarm signals.

It shall also be the duty of the PERSON IN CHARGE OF BUILDING to sound the interior alarm system at irregular intervals, but not less than once each calendar month, for the purpose of holding practice fire drills. He shall keep on the premises a record of such drills, showing the date when held and the required time for all occupants to reach the street or a point of safety outside the building.

The PERSON IN CHARGE OF BUILDING must immediately acquaint new tenants of the existence of the "Fire Drill" Organization and its purport.

Rule 12. Registration.

The name and address of every person, corporation or co-partnership, that will, under professional service, carry on the trade, business or calling of establishing, maintaining or supervising the "Fire Drill" shall be registered in the Fire Department, which Department shall, upon evidence of fitness, grant a certificate to that effect.

NOTICE

APPEALS AS TO MULTIPLE DWELLINGS

The Legislature, under Chapter 333 of 1948, has clarified Section 60 of the Multiple Dwelling Law by describing the agency authorized to grant variances under this Section, so as clearly to mean in New York City—the Board of Standards and Appeals.

Chapter 508 of 1948 has also been adopted by the Legislature, amending the Multiple Dwelling Law to provide, under new Section 310, for a Board of Appeals. By description the Board of Appeals means in New York City—the Board of Standards and Appeals. Section 310 is further amended by Chapter 805 of 1959 and provides as follows as to appeals:

LAWS OF NEW YORK—By Authority

Chapter 508 of 1948

§ 310. Board of appeals. 1. As used in this section "board" shall mean the agency of a city constituted as a board and authorized by law both to grant variances of the zoning resolution and to make rules supplemental to laws regulating construction, maintenance, use and area of buildings.

2. Where the compliance with the strict letter of this chapter causes any practical difficulties or any unnecessary hardships the board shall have the power, on satisfactory proof at a public hearing, provided the spirit and intent of this chapter are maintained and public health, safety and welfare preserved, and substantial justice done, to vary or modify any provision or requirement of this chapter, or any rule, regulation, supplementary regulation, ruling or order of the department with respect to the provisions of this chapter, as follows:

a. For multiple dwellings and buildings existing on July first, nineteen hundred forty-eight, provisions relating to:

- (1) Height and bulk;
- (2) Required open spaces;
- (3) Minimum dimensions of yards or courts;
- (4) Means of egress; or
- (5) Basements and cellars in dwellings erected on or after April twelfth, nineteen hundred one.

b. For multiple dwellings and buildings erected or to be erected after July first, nineteen hundred forty-eight, and such dwellings thereafter altered or to be altered, provisions relating to:

- (1) Required open spaces; or
- (2) Minimum dimensions of yards or courts.

Variations or modifications may be granted pursuant to this paragraph b only on condition that open areas for light and air are provided which are at least equivalent in area to those required by the applicable provisions of this chapter.

3. An application for such a variance or modification may be made by any person aggrieved or by the head of any public agency, within such time and under such procedure, conditions and rules as may be prescribed by the board. The board shall fix a reasonable time for the hearing of an application and shall require that due notice be given of the time and place of such hearing to the applicant and to the department. Any person or a duly authorized representative of any public agency may appear at any such hearing and be heard on any such application.

4. In every case the board shall state the reason or reasons for its decision. All decisions of the board shall be subject to review in the same manner as is provided by law for review of decisions of such board respecting variances of the zoning resolution.

5. A record of all decisions of the board, indexed according to the section or sections of this chapter affected thereby, shall be kept in the office of the board. Such record shall be open to public inspection at all times during business hours.

COURT DECISION

Matter of Soldiers, Sailors & Airmen's Club, Inc. vs. Board:—On July 19, 1955 the Board granted a variance under Section 21 of the Zoning Resolution, to permit in a residence use, D area district the erection and maintenance of a medical office building for education, research, consultation, examination and therapy in connection with cancer and its allied diseases, using more than the area permitted; Cal. No. 293-52-BZ—Vol. II, Premises 277-279 Lexington Avenue, east side, 42 $\frac{3}{4}$ feet north of East 36th Street, Block 892, Lot 22, Borough of Manhattan.

Upon court review, Mr. Justice Markowitz upheld the decision of the Board as to additional area of the building, citing the new decisions of the Appellate Division, (Village of Bronxville v. Francis, 1 App. Div. 2d 236) and as cited in the Law Journal of November 26, 1958, page 11, in the Matter of Ryback v. Murdock. (N. Y. Law Journal, December 9, 1958, page 13).

Matter of Soldiers, Sailors & Airmen's Club, Inc., pet-ap (Board of Standards and Appeals of the City of New York, res; 139 East 36th St. Corp., intervenor-res):—The Appellate Division, First Department, unanimously affirmed the Supreme Court, without opinion, in the "Pack Medical Foundation" case. N. Y. Law Journal, December 2, 1959, page 13).

NOTICE

1—CALENDAR: Notices of public hearing on applications for zoning variances will be published twice: first publication, listing new cases set for hearing, in the Bulletin available to the public at least 14 days before the date of hearing; second publication, in the last Bulletin available to the public immediately prior to the hearing date. The second publication will be augmented with a listing of cases laid over from previous hearings. Attention is directed to the MINUTES of such previous hearings, where the reasons for laid over cases will have been published. Notices of public hearing on applications for approval of materials and appliances will be published once, at least 10 days prior to the hearing date.

2—MINUTES: The publication of the "digest" of the applicant's statement has been discontinued, except that the administrative orders, decisions, etc., which are the subject of each application or appeal will be published. The summary of information given in the Appeal Form (Form A) shall be published for Administrative Appeals. The Board will continue to publish such other matters as it may deem advisable.

MAX H. FOLEY, Chairman.

310-40-SM

APPLICANT—United States Gypsum Company, owner—amendment, improvement of plank and additional uses.

APPEARANCES—

For Applicant: William W. Bainbridge.

ACTION OF BOARD—Resolution amended in accordance with the report and recommendation of Committee on Test.

THE VOTE—

Affirmative: Chairman Foley, Vice Chairman Kleinert, Commissioner Fox and Commissioner Becker 4
Negative: 0
Absent: Commissioner Sleeper 1

THE RESOLUTION—

WHEREAS, the report of a Committee on Test reads: 310-40-SM—Amendment to resolution as to improvement of plank and additional uses.

United States Gypsum Company requested by letter February 28, 1957 that the resolution adopted July 2, 1940 and amended at various times through February 19, 1952 under Calendar Number 310-40-SM be reopened and amended to approve an improved plank and additional uses. The resolution was reopened by vote of the Board March 19, 1957.

USE: The 2” reinforced gypsum plank with tongue and grooved metal edges is used as an incombustible floor and roof structural slab.

DESCRIPTION: The improved 2” thick gypsum plank differs from that previously approved only in the edge formation, now designed to closer tolerances. There are no other changes in metal gauges or weight.

INSPECTION AND TEST: Load tests in accordance with C26-626 of the Administrative Code were conducted at Ohio State University. These confirmed the original approval for a live load of 40 lbs. per sq. ft., in addition to the dead load of weight of plank, roof insulation and built up roofing for a clear span of 6’4”. The complete report is on file with and is part of the record.

RECOMMENDATION: The Committee on Test recommends that the resolution adopted July 2, 1940 under Calendar Number 310-40-SM and amended at various times, be amended to approve the newly improved 2” reinforced gypsum plank with tongue and grooved metal edges for a total dead and live load of 61 lbs. per sq. ft. on 6’4” clear span, and under the provisions of C26-575, C26-619.0 and C26-621.0, that it be approved for use as a roof in Class 2 construction as provided under C26-620 O. C. I. (b) and that it also be approved for use in Class 1 multi-story building roof construction where a three hour rating is required, provided three hour protection of steel is provided in accordance with C26-575 and C26-619.0 Administrative Code and ¼” gypsum mortar is placed over the plank or approved incombustible roof insulation is used instead of mortar, provided that all other provisions of the resolution as adopted July 2, 1940 and amended December 11, 1945 and February 19, 1952 under Calendar Number 310-40-SM are complied with.

WHEREAS, the report of a Committee on Test reads:

222-53-SA—Amendment to resolution as to additional model of oil fired furnaces.

Cox Manufacturing Co., requested that the resolution adopted December 22, 1953 under Calendar Number 222-53-SA be reopened and amended so as to include additional models of oil fired furnaces.

DESCRIPTION: The requested Model SO-525 is the same as those previously approved except the BTU input and gallonage has been increased to 4.5 gph. The applicant also requests approval of the HO Series which are Hi-Boy Units; The CFO Series which are counterflow units and the R-Series which are reverse flow or Low-Boy. All the units have been approved by the Underwriters' Laboratory:

RECOMMENDATION: The Committee on Test recommends that the resolution adopted December 22, 1953 under Calendar Number 222-53-SA be reopened and amended so as to include the Model SO-525, on condition that the requirements of the resolution adopted December 22, 1953 under Calendar Number 222-53-SA be complied with. The Committee further recommends that the Models HO Series, CFO Series and R Series be also approved under the same conditions except that these Series HO, CFO and R shall not be installed in garages or places of explosive atmosphere.

954-57-SM

APPLICANT—Northern Lightweight Aggregate Inc., owner.

APPEARANCES—

For Applicant: Cyril F. Howe and George C. Collyer.

ACTION OF BOARD—Material approved in accordance with the report and recommendation of Committee on Test.

THE VOTE—

Affirmative: Chairman Foley, Vice Chairman Kleinert and Commissioner Fox 3

Negative: 0

Absent: Commissioner Sleeper and Commissioner Becker 2

THE RESOLUTION—

WHEREAS, the report of a Committee on Test reads:

954-57-SM—Northern Lightweight Aggregate Inc., New York, filed December 10, 1957 for approval of the material Norlite under the provisions of C26-178.0.b, C26-10, C26-38.0, a.b.c.d.f.g, C26-315, C26-361, C26-363, C26-364, C26-365, C26-468, through C26-509, C26-522, C26-575, C26-620 and C26-630.

USE: The material is to be used as an aggregate in concrete.

DESCRIPTION: Norlite is the trade name of a lightweight aggregate manufactured from expanded shale. The shale is stripped from the quarry and then crushed and graded. The raw shale is then fed into a rotary kiln where the temperature is maintained at 2100°F. At this temperature the shale is softened to the point of incipient fusion and a rapid and explosive expansion of the gases occur. This results in the forming of individual non-connecting air cells which are vitreous and chemically inert. After this clinker has cooled it is crushed and graded. The various sizes are stored separately. The sizing is defined as follows: Fine— $\frac{3}{16}$ "-0", Intermediate— $\frac{3}{8}$ "- $\frac{3}{16}$ ", Course— $\frac{3}{4}$ "- $\frac{3}{8}$ ".

INSPECTION ON TEST: A comprehensive range of tests were determined upon by the Committee on Test. These tests included the following: Compressive strength, unit weight, modulus of elasticity, flexure strength, bond strength and determination of the properties of Norlite when in flexure and subjected to fire. These tests were conducted on various water-cement ratios so as to give sufficient data to plot all curves necessary to evaluate the properties of Norlite as an aggregate for concrete as accepted in general engineering practice.

The complete report of the tests are on file with and are part of the record.

The showing of the "E" value which is used to arrive at the "N" value, are numbered Test 3.

RECOMMENDATION: Since it is the general intention of the applicant to apply for the approval of Norlite, a lightweight aggregate, as an all purpose aggregate for plain concrete average A & B concrete and controlled concrete. The Committee has taken into consideration only those sections of the Code pertaining to those classifications.

On this basis and the tests and the data supplied by the applicant, The Committee on Test, under the provisions of C26-3.0, C26-4.0, C26-189.0 and C26-191.0 Administrative Building Code draw the following conclusions and recommend as follows in so far as granting approval under the various sections of the Administrative Building Code.

1. Sect. C26-10.a.b—The Committee is of the opinion that Norlite may be classed under the heading of Aggregate.

2. C26-315.0 Aggregates for reinforced concrete—As this section of the code does not mention expanded burnt shale mentioning only burnt clay, The Committee is of the opinion, that, under C26-189.O.C Norlite be approved as an aggregate for reinforced concrete as it meets the Standard Specifications for Light Weight Aggregate for Concrete ASTM Designation C130-42 and accordingly recommends approval under C26-315.0.

3. C26-361.0—The Committee recommends the approval of Norlite as a plain concrete and if a mix as described in the discussion of C26-365.0 is used, The Committee further recommends that the allowable working stresses be increased to 25% of the ultimate compressive strength.

4. C26-363.—Working Stresses. The Committee is of the opinion that the allowable working stresses used in the design of reinforced concrete structures may be established under C26-364 and C26-365 when using Norlite as an aggregate and accordingly recommends approval under C26-363.

5. C26-364.0—Controlled Concrete Proportions and Allowable Working Stresses—The Committee is of the opinion that the material Norlite may be used as an aggregate for controlled concrete and recommends approval as such on condition that for concrete with an air entraining agent, the air entraining agent shall be 2 ozs. per sack of cement and provided further that the Modulus of Elasticity shall be as follows:

Design Mix	Modulus of Elasticity
2,000 p.s.i.	1,680,000
2,500 p.s.i.	2,060,000
3,000 p.s.i.	2,360,000
3,500 p.s.i.	2,600,000
4,000 p.s.i.	3,230,000

and that all other working stresses for controlled concrete conform to the table of Allowable Working Stresses as set forth in C26-364.2.

6. C26-365.—Average Concrete; Proportions and Allowable Working Stresses.

The Committee is of the opinion, that, on the basis of the tests and as C26-365.o.b does not prohibit the use of average concrete of different mix proportions provided the working stresses conform to the values as set forth in C26-365.3; Norlite be recommended as an aggregate for average concrete in the following proportions and whose working stresses shall conform to the Table of Allowable Working Stresses as set forth in C26-365.3.

One part of cement to 3 parts of fine Norlite aggregate to 1.75 parts of coarse Norlite aggregate with a maximum of 50 gallons of total water content per cu. yd., and if an air entraining agent is added to the above mix, it shall be not more than 2 oz. This mix will give working stresses as set forth in C26-365.3 column A except that the value of the Modulus of Elasticity of the concrete shall be as shown under paragraph 5.

7. C26-468 through C26-509.0 (Reinforced Concrete Construction).

The Committee is of the opinion that Norlite meets the requirements of C26-468 through C26-509 except that the mix, as required in C26-501.0 (Field Tests for Average Concrete) may be, as set forth in the discussion above, as meeting the requirements of C26-365.1 and 2 and recommends the approval of Norlite as an aggregate for reinforced concrete on that condition.

8. C26-522 (Painting of Structural Steel).

The Committee is of the opinion that Norlite meets the requirements of C26-522 as it may be considered as non-corrosive aggregate.

9. C26-575 (Thickness and Fire Resistive Rating for Protection of Steel). As Norlite meets the requirements of C26-38.0 b.c.d.f and g as noted in Paragraphs 5 and 6 above; the Committee is of the opinion that Norlite meets the requirements of C26-570.

MINUTES

10. C26-630.0 (Top Filling). The Committee recommends the approval of Norlite as a Top Filling as meeting the requirements of C26-530.

The Committee therefore recommends the approval of Norlite (a general purpose light weight aggregate) under the provisions of the Administrative Building Code as mentioned herein, on condition that each shipment of Norlite be accompanied by a bill of lading bearing the following statement "Approved by the Board of Standards and Appeals for use in New York City under Calendar Number 954-57-SM".

Absent: Commissioner Sleeper and Commissioner Becker 2

THE RESOLUTION—

WHEREAS, the report of a Committee on Test reads:

722-58-SA—Weldit Inc., Detroit, Michigan, filed December 9, 1958, for approval of the Weldit Salamanders, Model 1900 for use in New York City under the provisions of Section C19-91.0 Administrative Code and the requirements of the Fire Commissioner.

USE: A space heater for temporary use in drying concrete and plaster construction work during cold weather.

DESCRIPTION: The Weldit Salamanders, Model 1900, are cylindrical shaped salamanders designed to burn liquefied petroleum gases.

The salamanders consist of an outer steel shell mounted on four legs. A head plate is secured by brackets to the outer shell. A base plate secured to the four legs beneath the outer shell carries a jet-type burner with flame spreader.

The fuel, propane gas, is supplied to the burner from a standard ICC cylinder equipped with an approved non-adjustable type regulator, factory set for 11 inches water column maximum gas pressure and a heavy wall $\frac{3}{16}$ I.D. neoprene hose made with threaded connections. The salamanders are equipped with pilot light and automatic gas shut off valve, also a manual shut off valve.

The Model 1900 salamander has a lever control at the burner orifice that can be moved through a 120° arc and to vary the heat input from 25,000 Btu per hour to 50,000 Btu per hour.

INSPECTION AND TEST: A sample Model 1900 salamander was inspected by Ass't. Engr. G. F. Sklenarik, at premises 49-10 20th Avenue, Queens. Applicant's letter of Nov. 3, 1959 states that when this salamander is used with a $\frac{3}{16}$ I.D. hose and a regulator set at 11 inches w.c.: all tests indicated that the maximum input is 50,000 Btu per hr.

RECOMMENDATION: The Committee recommends the approval of the Weldit Salamander, Model 1900, for temporary use in drying concrete and plaster construction when used in accordance with this report and under the provisions of C19-91.0 Administrative Code, Rule 2.7 of the Board's Rules for the Erection, Alteration, Repair and

Demolition provided that each salamander shall bear a label, permanently affixed, reading "Approved by the Board of Standards and Appeals for use in New York City under Calendar Number 722-58-SA".

THE RESOLUTION—

WHEREAS, the report of a Committee on Test reads:

131-59-SA—Byron Jackson Pumps Inc., New York, filed March 4, 1959 an application with the Board of Standards and Appeals for approval of their Bilton Pumps, Models 1025 and 1125 under the provisions of Article 8, Chapter 19, Administrative Code.

USE: Centrifugal pumps for liquid petroleum products.

DESCRIPTION: The Model 1025 pump is a horizontal single stage end suction pump furnished with a rigid ball bearing frame. The pump is mounted on a channel steel base plate and provided with a flexible coupling for direct connection of the driver such as an electric motor. The pumps range in size from 1 $\frac{1}{4}$ inches to 4 inches with capacities from 10 to 600 gpm with a head range of 20' to 340'. Up to the 3 inch size the pumps may be operated up to 3600 rpm. For the 4 inch size the maximum speed is 1800 rpm. The impeller is of the single suction enclosed type, machined on the outside surface and statically balanced. It is made of bronze. Pump case is cast iron, the shaft is steel.

The Model 1125 pump is a horizontal, single stage end suction pump made with a rigid ball bearing frame. It is mounted on a channel or fabricated steel baseplate, depending on size of pump, and is provided with a flexible coupling for direct connection of the driver. The pumps range in size from 2 inches to 5 inches with capacities from 200 to 2000 gpm with a head range of 80' to 350'. The pumps designated as TH pumps (2 to 4 inches size, counter clockwise rotation) may be operated up to 3600 rpm. The pumps designated as MM and MH pumps (4 to 5 inch size clockwise rotation) are to be limited to a maximum of 1800 rpm. The impeller is of bronze and is secured to a steel shaft. Pump case is cast iron.

INSPECTION AND TEST: All details were examined by Ass't. Engr. G. F. Sklenarik.

RECOMMENDATION: The Committee recommends the approval of the Byron Jackson Bilton Pumps, Models 1025 and 1125 for use in New York City under the provisions of Article 8, Chapter 19, Administrative Code as a transfer pump for petroleum products provided that when electric drive is used the installation shall conform to the requirements of the Electrical Code of the City of New York and provided that each pump shall bear a label permanently affixed, reading "Approved by the Board of Standards and

USE: Commercial Washing Machines—16 lb. capacity.

DESCRIPTION: The washer is identical to the Model WEC approved by the Board under Calendar Number 74-55-SA on December 17, 1957, except in styling changes which have altered the trim and various hardware items. The hardware items being a new coin meter, pilot lights, and selector switch for soak, rinse and wash.

INSPECTION AND TEST: Details of construction were examined by Ass't. Engr. J. A. Darts and the water supply feature of the requested model and the approved models were compared and it was noted that an air gap of $1\frac{1}{8}$ " is maintained.

RECOMMENDATION: The Committee on Test recommends the approval of the Philco-Bendix Automatic Commercial Washer, Models WC-9916M and WC-9916 for use

in New York City under the provisions of the Submerged Inlet Rules of the Board on condition that the air gap of $1\frac{1}{8}$ " is maintained, that all electrical work comply with the requirements of the Electrical Code of the City of New York and that each appliance bear a label, permanently affixed, reading "Approved by the Board of Standards and Appeals for use in New York City under Calendar Number 154-59-SA".

THE RESOLUTION—

WHEREAS, this application was granted by the Board on June 2, 1959 on certain conditions; and

WHEREAS, the applicant requested an amendment of the resolution.

Resolved, that the Board of Standards and Appeals does hereby *amend* the resolution adopted on June 2, 1959, by adding thereto:

"that the existing retail store use on the first floor may be continued, as shown on revised drawing marked, "Received November 20, 1959," 1 sheet, *on condition* that other than as herein *amended* the resolution above cited shall be complied with in all respects." (Alt.. 1944/58)

1125-23-BZ—Vol. II

APPLICANT—Henry Nordheim, for Chardan Garage, Inc., owner.

SUBJECT—Application for consideration—reopening for extension of term of variance which has expired November 23, 1959—re Application, decision of the Borough Superintendent; previously granted on condition, under sections 7d and 7i of the Zoning Resolution, permitting in a business use district, the addition of a motor vehicle repair shop to existing storage garage for more than five motor vehicles.

PREMISES AFFECTED—3150 Jerome Avenue and 1 East 205th Street, northeast corner, Block 3322, Lot 11, Borough of The Bronx.

APPEARANCES—

For Applicant: Henry Nordheim.

ACTION OF BOARD—Application reopened and set for hearing on January 5, 1960, at 10 a.m., to consider extension of the term of variance, requiring new decision of the Borough Superintendent, which has been filed and two publications in the Bulletin as notice.

THE RESOLUTION—

WHEREAS, the report of a Committee on Test reads:
171-59-SM—K.S.M. Products Inc., Merchantville, New Jer-
sey, filed March 17, 1959 for approval of the K.S.M. Shear
Connector Studs under the provisions of C26-191.0 Adminis-
trative Building Code.

USE: The stud is a shear connector for composite steel
and concrete floor and roof construction.

DESCRIPTION: The stud connector is essentially a round
steel bar welded at one end to the "I" beam and having an
upset end at the other. The stud resists horizontal shear
by bending. The upset head, shank diameter plus ½ inch,
prevents relative movement of the slab in a vertical direc-
tion.

The studs are fastened to the steel structure by a stud
welding gun which utilizes an electric arc welding process.

When installed the system consists of a structural steel
beam, a reinforced concrete slab and the *K.S.M. Shear Con-
nector* Stud welded to the beam and solidly embedded into
the concrete slab, thereby combining these three elements
into one structural unit.

A composite beam consisting of a concrete slab joined to
a steel section by shear connectors, is designed using the
conventional transformed section theory of reinforced con-
crete design. This involves an investigation of the maximum
flexural and shearing stresses in the beam. In a steel beam
which is a homogeneous section, the neutral axis passes
through the center of gravity of the beam. For the design
and analysis of a composite beam, the concrete slab is trans-
formed into an equivalent steel area. This equivalent steel
is proportioned according to the ratio of the modulus of
elasticity of the steel to concrete known as *N*. The com-
posite beam is therefore made similar to a homogeneous
steel beam.

INSPECTION AND TEST: The applicant has filed a
complete analysis with computations of the composite section
and has also submitted test reports of slippage and shear
tests and comparative tests of the stud as against the spiral.

The formula evolved from the test for the design load on
one stud connector and for the spacing of the stud con-
nectors is as follows:

$$\text{Design load} = \frac{Q_{uc}}{F.S.} = \frac{330d^2 \sqrt{f_c}}{2.24}$$

$$\text{where } Q = 330d^2 \sqrt{f_c}$$

$$F.S. = 2.24$$

$$d = \text{Stud diameter}$$

$$f_c = \text{Concrete Stress at 28 days}$$

spacing

$$p = \frac{I_e}{MV_c} \times \frac{Q_{uc}}{F.S.}$$

Where *p* = pitch or spacing

I_e = Moment of Inertia of composite sec-
tion with *n* = 10

V_c = Vertical shear acting on composite
beam

M = Statical moment of transformed con-
crete area about neutral axis of com-
posite section with *N* = 10

RECOMMENDATION: On the basis of the data supplied by the applicant, the Committee on Test recommends the approval of the K.S.M. Shear Connector Studs for composite steel and concrete floor and roof construction on the following conditions:

1. That all concrete and steel stress shall be as provided for under the pertinent sections of the Administrative Building Code but in no event shall the maximum allowable stresses exceed those values as provided under Table I of C26-364.0.

2. That all concrete work shall comply with the requirements of Sub Article 5, C26-468.0, Reinforced Concrete Construction.

3. During construction, the beams and girders, when necessary, shall be provided with supports to carry all loads until the concrete has set so as to prevent pre-and other straining beyond the maximum deflection of 1/360 of the span.

4. Where fire protection is required, the beam shall meet the requirements for Class I and Class II construction.

5. The depth of slab shall meet the requirements of C26-473.0 and the requirements of a T beam set forth under C26-475.0 but in no event shall the top of the connector be less than 1 inch below the top of the unfinished slab or finished slab when poured monolithically.

6. The use of the beam shall be limited to a simple span with a maximum span of twenty-four times the depth of the beam from the top of slab to the bottom of steel, but not over 100 feet in any case.

7. The maximum live load shall not exceed 500 lbs. per square foot loads in excess of 125 lbs. per square foot shall be based on use in Class I and Class II construction.

8. All work shall be performed under the supervision of a licensed professional engineer of the company *or his representative* and all materials and workmanship shall meet the requirements of the Administrative Building Code and the Rules of the Board.

9. All plans filed with the Department of Buildings showing the proposed use of this system shall be stamped "Approved by the Board of Standards and Appeals for use in New York City under Calendar Number 171-59-SM" and all containers in which the studs are marketed shall be similarly marked.

WHEREAS, the report of a Committee on Test Reads: 520-59-SA—The Barber Mfg. Co., Cleveland, Ohio, filed August 5, 1959 for approval of their Tele-Tube DS-225, Spread Heat UP-1A, 2A, 3A and Contractor FD-225, 275, 370 and 400 Conversion Gas Burners under the provisions of Article 12, Administrative Building Code.

USE: Conversion type gas burners for installation in furnaces or boilers.

DESCRIPTION: The Tele-Tube series burner is an atmospheric inshot type with flame spreader. It has a telescoping venturi tube which gives the burner a variable length from 6½" to 13½". Primary and secondary air are adjustable. Each burner is equipped with a combination gas valve and 100% safety pilot. The capacity of the burner is from 50,000 to 225,000 Btu per hour input. The Spread Heat burner is an atmospheric upshot burner with flame spreader. Primary air intake is adjustable and has a locking screw. Secondary air is supplied through an adjustable air door. Each burner is equipped with a pressure regulator and combination gas valve with 100% safety pilot. The capacity of the UP-1A is 50,000 to 120,000 Btu per hour, of the UP-2A, 50,000 to 240,000 Btu per hour and of the UP-3A, 200,000 to 400,000 Btu per hour.

The Contractor series is a power gas burner made with a 4" diameter blast tube fitted with an adjustable flange for positioning the burner in the combustion chamber. The blast tube is available in four different lengths. Each burner is equipped with an automatic gas valve and safety pilot. Primary and secondary combustion air are adjustable and the gas orifice may also be adjusted to vary the capacity of the burner.

The capacities of the various models are:

FD-225.....	75,000 to 225,000	Btu per hr. input
FD-275.....	75,000 to 275,000	" " " "
FD-370.....	150,000 to 370,000	" " " "
FD-400.....	150,000 to 400,000	" " " "

INSPECTION AND TEST: The details of design were examined by Ass't. Engr. G. F. Sklenarik. These burners were tested and approved by A.G.A.

RECOMMENDATION: The Committee on Test recommends the approval of the Barber Tele-Tube DS-225, Spread Heat UP-1A, 2A, 3A and Contractor FD-225, 275, 370, and 400 Conversion Gas Burners for use in New York City under the provisions of Article 12, Administrative Building Code provided each burner shall bear a label, permanently affixed, reading "Approved by the Board of Standards and Appeals for use in New York City under Calendar Number 520-59-SA".

COURT DECISION

Matter of Lacitra vs. Foley, et al:—Calendar Number 344-59-BZ; Premises 1814 Bronxdale Avenue, east side, 100.77 feet north of Morris Park Avenue, Block 4123, Lots 36 and 38, Borough of The Bronx.

At Supreme Court, Special Term, Part I, Mr. Justice Hofstadter denied the motion to restrain the Board of Standards and Appeals from Proceeding with the application for a zoning variance pending in the Board in the following opinion published in the New York Law Journal on November 19, 1959, page 13:

"Lacitra v. Foley—The petitioners have instituted this proceeding under article 78 of the Civil Practice Act to restrain the Board of Standards and Appeals from proceeding with an application by a property owner, now pending before it, for a variance of the Zoning Resolution pursuant to section 666, subdivision 5, of the New York City Charter. The petitioners assert that the board is acting without and in excess of jurisdiction and without due process of law. The basic contention of the petitioners is that the proceeding before the board is judicial or quasi-judicial and that they are entitled to trial in a court of law, rather than before the board which is not governed by the strict rules of evidence. This contention rests in part on their claim that the variance sought will violate a restrictive covenant of record. The Board of Standards and Appeals by cross-motion seeks dismissal on the ground that the petitions are insufficient in law and do not show that the petitioners have any status warranting the granting of relief to them. The court is constrained to grant the cross-motion. The petitioners pray for a prohibition order. Since, however, the petitioners, if aggrieved, may have the action of the Board of Standards and Appeals reviewed in a certiorari proceeding pursuant to section 668e-0 of the Administrative Code, they have available a ready remedy through ordinary legal process and are in no need of prohibition. In such situation, the court must withhold interference by prohibition with the regular procedure before the board (People ex rel. Childs v. Extraordinary Trial Term, 228 N. Y. 463; People ex rel. Ballin v. Smith, 184 N. Y. 96; Matter of Harris Motors, Inc., v. Klapp, 296 N. Y. 242). The informality of the procedure before the board does not make it objectionable or invalid under the law (People ex rel. Fordham M. R. Church v. Walsh, 244 N. Y. 280, 287). If the ultimate action of the board is adverse to the petitioners they will in the certiorari proceeding have full opportunity to show that the action complained of offends the law. The need for exercise of judgment by an administrative board in making its decision does not convert the issue before it into one cognizable solely by a judicial tribunal. The place of administrative procedure in our system is too secure to be vincible on this ground at this late date. If the rights of the petitioners under the restrictive covenant are in danger, of course, free to vindicate them by action (Matter of Isenbarth v. Bartnett, 206 App. Div. 546, 548, aff'd 237 N. Y. 617). Accordingly, the motion of the petitioners is denied and the cross-motion to dismiss is granted."

NOTICE

1—CALENDAR: Notices of public hearing on applications for zoning variances will be published twice: first publication, listing new cases set for hearing, in the Bulletin available to the public at least 14 days before the date of hearing; second publication, in the last Bulletin available to the public immediately prior to the hearing date. The second publication will be augmented with a listing of cases laid over from previous hearings. Attention is directed to the MINUTES of such previous hearings, where the reasons for laid over cases will have been published. Notices of public hearing on applications for approval of materials and appliances will be published once, at least 10 days prior to the hearing date.

2—MINUTES: The publication of the "digest" of the applicant's statement has been discontinued, except that the administrative orders, decisions, etc., which are the subject of each application or appeal will be published. The summary of information given in the Appeal Form (Form A) shall be published for Administrative Appeals. The Board will continue to publish such other matters as it may deem advisable.

APPEARANCES—

For Applicant: Joseph M. Finworth.

ACTION OF BOARD—Application reopened and resolution amended in accordance with the report and recommendation of Committee on Test.

THE VOTE—

Affirmative: Chairman Foley, Vice Chairman Kleinert,
Commissioner Sleeper, Commissioner Fox and
Commissioner Becker 5
Negative: 0

THE RESOLUTION—

WHEREAS, the report of a Committee on Test reads:

449-50-SA—Orr & Sembower Inc., New York, N. Y., requested by letter that the resolution adopted February 14, 1951 under Calendar Number 449-50-SA to be reopened and amended so as to include the Powermaster Boiler, Model 5, under the provisions of Article 12, Administrative Building Code and Oil Burner Rules of the Board.

USE: A steam or hot water boiler.

DESCRIPTION: The Model 5 Powermaster is similar to the Model 3, previously approved.

It is a complete self-contained integrated boiler and burner with all controls installed and completely wired, mounted on its own steel base.

The boiler is a three pass modified Scotch Marine type built to ASME specifications. The Pressure Vessel is equipped with the necessary relief valves, water column connections, feed connections, blowdown connections and gauge connections.

The front cover of the boiler is made in two sections for easy removal without disturbing the burner.

The combustion equipment may be an approved oil, gas or combustion oil/gas burner.

The oil burner is of the pressure atomizing type with direct electric ignition. The burner is designed for number two fuel oil. The unit is complete with a forced draft blower; motor driven rotary gear type oil pump with built in pressure regulator; piping system with suction strainer, solenoid valve, and pressure gauge.

The gas burner is of the partial pre-mixing type with gas pilot ignition. The unit is complete with a forced draft blower, electrically operated valve and manual stop cock, all components piped and wired as necessary and ready for installation and operation. A pressure regulator is furnished with the unit.

The combination oil/gas burner is a composite of the individual oil and gas burners, conveniently changeable from one fuel to the other. The combination oil/gas burner is equipped with a gas pilot ignitor.

The programming control programs the starting sequence, automatically purging the combustion chamber before ignition and after each shutdown. It also programs ignition, fuel supply and burner operation with flame failure protection. The burner operation is controlled through the use of an integrally mounted high limit control-pressure on steam units, temperature on hot water units—low water cut-off control, flame failure control and air-fuel interlock.

The Model 5 boiler is made in capacities ranging from 20 to 100 H.P. from 15 psi steam to 250 psi steam. The unit is U.L. approved.

RECOMMENDATION: The Committee recommends that the resolution adopted February 14, 1951 under Calendar Number 449-50-SA be amended so as to include the Powermaster Boiler, Model 5, on condition that the requirements of the resolution adopted Feb. 14, 1951 under Calendar Number 449-50-SA be complied with.

THE RESOLUTION—

WHEREAS, the report of a Committee on Test reads:

59-54-SA—Hastings Air Control Inc., Omaha, Nebraska, requested by letter dated November 4, 1959 that the resolution adopted December 18, 1956 under Calendar Number 59-54-SA be reopened and amended to include additional gas fired unit heaters, Models F-25, F-50, F-75, F-300, B-75, B-300, DU-75, SD-215, SD-255 and SD-300.

DESCRIPTION: These new model gas fired unit heaters are similar to the corresponding units previously approved under Calendar Number 59-54-SA except for cabinet styling and heat capacities. The F Models have a fan for air circulation; the B Models use a centrifugal blower and the DU and SD Models are duct furnaces. The numeral in the model designated indicates in thousands the Btu input per hour.

RECOMMENDATION: The Committee recommends that the resolution adopted December 18, 1956 under Calendar Number 59-54-SA be amended so as to include the Hastings Air Control Gas Unit Heater, Models F-25, F-50, F-75, F-300, B-75, B-300, DU-75, SD-215, SD-255 and SD-300, on condition that the requirements of the resolution adopted Dec. 18, 1956 under Calendar Number 59-54-SA be complied with.

THE RESOLUTION—

WHEREAS, the report of a Committee Test reads:

155-56-SM—Goodall Rubber Co., New York, N. Y., filed February 21, 1956 an application for approval of Dri-Rack Fire Hose, 1½ inch and 2½ inch sizes under the provisions of C26-1398.0 Administrative Building Code.

USE: Fire hose for use on yard hydrant systems.

DESCRIPTION: Dri-Rack Fire Hose is made up of a lining or tube of a natural rubber latex coated cotton sheeting and a woven jacket covering the inner tube and bonded

MINUTES

to it. In the case of multiple-jacketed hose, one or more additional woven jackets are provided.

The lining has an average total thickness of .016 inch and an internal diameter of $2\frac{1}{32}$ inches for the $2\frac{1}{2}$ inch size. The average thickness of the inner latex coating of the lining is .010 inch. A latex backing compound is used to bond the tube by vulcanization to the woven jacket. Single jackets or inner jackets of multiple jacketed hose are seamless and made of synthetic polyester filament filler threads woven around the hose and cotton warp threads interwoven with and covering the filler threads.

INSPECTION AND TEST: The details of the application were examined by Ass't. Engr. G. F. Sklenarik.

The Dri-Back Fire Hose, also sold under the name Ezflex, was tested and approved by the Factory Mutuals and Underwriters' Laboratories.

The Hose, available in 50 foot lengths, was successfully tested hydrostatically to 400 psi. In addition a variety of lengths were checked for tensile strengths of hose and lining.

Also, a repeated bending test, alternating high and low pressure test, fold resistance test, friction loss test and exposure to water, heat and handling tests were conducted with satisfactory results. The complete reports are on file and are part of the record.

RECOMMENDATION: The Committee recommends the approval of the Dri-Rack Fire Hose $1\frac{1}{2}$ inch and $2\frac{1}{2}$ inch sizes for use in New York City in shipyards, oil storage plants, lumber yards, exhibition parks and similar enclosures in accordance with the provisions of C26-1398.0.b Administrative Building Code, provided that each length of hose shall bear a label, permanently affixed, reading "Approved by the Board of Standards and Appeals for use in New York City under Calendar Number 155-56-SM."

320-56-SA—Industrial Division, American Radiator & Standard Sanitary Corp., filed April 2, 1956 an application for approval of the American Standard CAC Air Conditioners, Models 3C, 5C, 8C, 10C, 15C, 20C, 5CA8, 8CA8, 10CA8, 10DA8, 15DA8, and 20DA8 under the provisions of Section C26-191.0 and Article 18, Chapter 19, Administrative Code.

USE: Commercial type air conditioning units.

DESCRIPTION: The American Standard Air Conditioners are package units, assembled at the factory and consist of a single or double compression system employing F-22 as refrigerant and either a water cooled condenser installed within the unit or an air cooled condenser installed remotely in the field. The units also are provided with filters

and blower fans for air circulation. The refrigerating systems are provided with fusible plugs on the receiver.

The capacities of the various models are as follows:

Water Cooled Units

Model	H.P.	Tons Capacity	Refrigerant Charge
3C	3	3	7 lbs.
5C	5	5	12½ lbs.
8C	7½	7½	14½ lbs.
10C	1 - 10 or 2 - 5	10 total	17 lbs. single 12½ lbs. each double
15C	2 - 7½	15 total	14½ lbs. each
20C	2 - 10	20 total	18½ lbs. each

With remotely installed air cooled package condensers which include condenser coils, receivers and air fans with motors.

THE RESOLUTION—

WHEREAS, the report of a Committee on Test reads:
256-57-SM—Amendment to resolution as to additional size plank.

Porete Manufacturing Co., North Arlington, New Jersey, requested that the resolution adopted November 13, 1957 under Calendar Number 256-57-SM be reopened and amended so as to include additional size Porex planks.

USE: The slabs are used as an incombustible floor and/or roof slab.

MINUTES

DESCRIPTION: The slabs are made of wood fiber, which is impregnated by a solution containing silicate of soda and portland cement. The manufacture of the slabs is identical to the procedure described in the resolution adopted November 13, 1957 under Calendar Number 256-57-SM.

INSPECTION AND TEST: Samples of the material were tested in accordance with the requirements of C26-626.0 Administrative Building Code by the Pittsburgh Testing Laboratory. The results were as follows:

- 1) Plain Porex—Non reinforced— $3\frac{1}{2}$ " thick—4'-4" clear span—Safe carrying capacity = 91 lbs. per sq. ft.
- 2) Plain Porex—Non reinforced—3" thick—3'-10" clear span—Safe carrying capacity = 73 lbs. per sq. ft.
- 3) Plain Porex—Non reinforced— $2\frac{1}{2}$ " thick—3'-4" clear span—Safe carrying capacity = 86 lbs. per sq. ft.
- 4) Plain Porex—Non reinforced—2" thick—2'-10" clear span—Safe carrying capacity = 80 lbs. per sq. ft.
- 5) Composite Porex— $\frac{1}{2}$ " reinforcing bars top & bottom— $3\frac{1}{2}$ " thick—8'-8" clear span—Safe carrying capacity = 51 lbs. per sq. ft.
- 6) Composite Porex— $\frac{1}{2}$ " reinforcing bars top and bottom— $3\frac{1}{2}$ " thick—8'-2" clear span—Safe carrying capacity = 59 lbs. per sq. ft.
- 7) Composite Porex— $\frac{1}{2}$ " reinforcing bars top and bottom—3" thick—Clear Span 7'-8"—Safe carrying capacity = 53 lbs. per sq. ft.
- 8) Composite Porex— $\frac{3}{8}$ " reinforcing bars top and bottom— $2\frac{1}{2}$ " thick—Clear Span—5'-2"—Safe carrying capacity = 71 lbs. per sq. ft.

The complete report is on file with and is part of the record.

RECOMMENDATION: The Committee recommends that the resolution adopted November 13, 1957 under Calendar Number 256-57-SM be reopened and amended to include the additional slabs as herein described for spans and loads as herein specified for use in New York City under the provisions of C26-618.0, C26-619.0, C26-620.b, C26-344.0 and C26-347.0 Administrative Building Code, on condition that the requirements of the resolution adopted November 13, 1957 under Calendar Number 256-57-SM are complied with.

THE RESOLUTION—

WHEREAS, the report of a Committee on Test reads:
707-57-SA—American-Standard Air Conditioning Division, New York, N. Y., filed September 6, 1957 for approval of the American-Standard Air Cooled Evaporator and Condensing Units, Models RC-H, RC-V, RC-C, RC-B Evaporator Units and AC-A Condensing Units for use in New

York City under the provisions of section C26-191.0 and Article 18, Chapter 19, Administrative Code.

USE: Component parts of refrigeration systems used in air conditioning.

DESCRIPTION: The RC-H, RC-V and RC-C Evaporator Units consist of a finned evaporator coil and thermostatic expansion valve enclosed in a sheet steel jacket. The RC-B Evaporator Units consist of a finned evaporator coil, thermostatic expansion valve and blower assembly enclosed in a sheet steel jacket. These units are intended for use with remotely located air cooled condensing units. The coils are arranged in their respective jackets for various applications as indicated by the suffix letter in the model designation. Model RC-H coils are arranged for horizontal air flow, Model RC-V coils are arranged for vertical air flow, Model RC-C coils are arranged for counter flow.

The suffix letter "B" indicates the incorporation of a blower assembly.

The evaporator units are designed for F-22 refrigerant with changes ranging from 6 lbs. 11 oz. for the smallest size to 14 lbs. for the largest.

The AC-A Air Cooled Condensing Units consist of a motor driven compressor assembly, air cooled condensers, receiver and interconnecting tubing. Electrical components consist of a condenser fan motor, capacitors, starting relay and overload protector all factory mounted and wired. The entire assembly is mounted in a metal enclosure designed for outdoor installation.

The condensing units are sized as follows:

Model	H. P.	Refrigerant
AC-2A	2	F-22
AC-3A	3	F-22
AC-5A	5	F-22

INSPECTION AND TEST: All details of construction were examined by Ass't Engr. G. F. Sklenarik, Committee on Test.

RECOMMENDATION: On the basis of the examination and the data submitted by the applicant, the Committee on Test recommends the approval of the American-Standard Evaporators Models RC-H, RC-V, RC-C, RC-B and Air-Cooled Condensing Units Models AC-A for use in New York City under the provisions of Article 18, Chapter 19 Administrative Code provided that each unit shall bear a label, permanently affixed, reading "Approved by the Board of Standards and Appeals for use in New York City under Calendar Number 707-57-SA".

THE RESOLUTION—

WHEREAS, the report of a Committee on Test reads:

183-59-SA—Continental Cleaning Equipment Corp., for Macchine Impianti Lavaggio, Milano, Italy, filed March 23, 1959 an application for approval of the M.I.L. 12 Dry Cleaning Machine for use in New York City under the provisions of the Rules of the Board covering Dry Cleaning Establishments.

USE: Dry cleaning machines for use with non-combustible cleaning solvent—perchloroethylene.

DESCRIPTION: The M.I.L. 12 Dry Cleaning Machine is a package unit designed for automatically timed or manual operation. It consists of a stainless steel washer-dryer cage, a metal filter and filter pump, an electrically heated still, a water cooled solvent recovery unit, electrically heated warm air unit, air blower fan, button and lint traps, solvent and detergent storage tanks, all connected by piping. Drive is by electric motor. An exhaust stack is provided and is carried to atmosphere.

The M.I.L. 12 is made for a maximum 30 lb. dry load and has a washer cage 30 inches in diameter and 20 inches deep. The storage tanks have a capacity of 35 gallons each. The still capacity is approximately 35 gallons. The unit is so constructed that it cannot be started unless the door to the washer cage is properly closed.

INSPECTION AND TEST: A typical installation was inspected at premises 218-54 Hempstead Avenue, Queens, by Ass't. Engr. G. F. Sklenarik. Present were Mr. Finkelstein

and Mr. Laurino. The appliance operated properly as designed. The electrical equipment was inspected by the New York Board of Fire Underwriters, App. A01290.

The dimensions of the washer cage were checked to determine load capacity of 2.8 lbs. of dry wash per cubic foot of cage volume in accordance with the Board's Rules.

RECOMMENDATION: The Committee recommends the approval of the M.I.L. 12 Dry Cleaning Machine for use in New York City in accordance with this report, the Board's Rules Covering Cleaning Establishments and when installed in accordance with the Electrical Code of the City of New York and provided that each shall bear a label, permanently affixed, reading "Approved by the Board of Standards and Appeals, for use in New York City under Calendar Number 183-59-SA."

THE RESOLUTION—

195-59-SM—Bridgeport Chemical Corp., Mineola, New York, filed March 11, 1959, an application with the Board of Standards and Appeals for approval of Glass Armor Jet Bond as a method of repair for 275 gallon fuel oil storage tanks under the Oil Burner Rules of the Board.

PURPOSE: A method of tank repair for 275 gallon fuel oil tanks.

DESCRIPTION: The Glass Armor Jet Bond method of tank repair consists of applying a lamination of fibre glass fabric with epoxy resin to the bottom of a 275 gallon fuel oil storage tank, and curing the resin so that a hard, corrosion resistant patch is obtained.

The tank is first emptied of any oil, disconnected from the piping and inverted. The bottom is then scraped to clean metal, degreased with trichloroethane and, when dry, a coat of Jet Bond Glass Armor Epoxy Resin and Activator is applied over the whole bottom of the tank between the leg brackets and 4 inches up on the end heads. This is done by hand with the use of heavy rubber gloves. The application of resin is then covered with a single piece of fibreglas .013 ga., 10 oz. per sq. yd. which is cut to fit the coated surface. This is repeated with another application of resin over the fibreglas and then a second layer of fibreglas is put down which is coated over with a final application of resin. The resin is cured by means of electric heat lamps and the laminate sets to a hard, corrosion resistant patch.

INSPECTION AND TEST: Repairs made with these materials were inspected at the premises of the Bridgeport Chemical Corp., Mineola, Long Island.

A 275 gallon tank that had a 3 inch by 12 inch opening cut into its bottom and repaired as described above was subjected to an internal pressure of 10 p.s.i. without any evidence of leakage or deformation at the repair.

A five gallon container with $\frac{1}{4}$ inch holes drilled in the bottom was repaired with the fibreglas laminate as above, partially filled with water and set over a wood fire for 45

MINUTES

minutes. Outside of some carbonizing on the surface of the patch, there was no other effect.

Other flame tests indicated that this laminate does not support combustion.

A tensile test of the epoxy resin alone showed failure at 4000 p.s.i.

RECOMMENDATION: On the basis of the tests and the supporting data submitted by the applicant, the Committee on Test recommends the approval of Glass Armor Jet Bond as a method of repair for 275 gallon above ground, fuel oil storage tanks when applied in accordance with this report and the recommendations of the manufacturer by such persons, firms or corporation as are duly licensed by the Bridgeport Chemical Co., and provided that each container in which the Jetbond Glass Armor Epoxy Resin and the Activator and also the fibreglas laminate are packaged shall be labeled or tagged reading "Approved by the Board of Standards and Appeals for use in New York City under Calendar Number 195-59-SM."

THE RESOLUTION—

WHEREAS, the report of a Committee on Test reads:
225-59-SA—Edward J. Denecke, agent for Prizer-Painter Stove Works, Reading, Pa., owner, filed April 2, 1959 for approval of the Prizer Gas Range with kitchen heater, Models 130DM and 136SM for use in New York City under the provisions of Article 12, Administrative Building Code.

USE: Domestic type combination cooking and heating gas range.

DESCRIPTION: The Model 130DM is a 30" wide divided top cooking stove equipped with a kitchen heater having an input rating of 25,000 Btu with a deluxe backguard. The heater has an all steel circulating heat combustion chamber with porcelain enamel 18 gauge heat exchanger and a cast iron blue flame burner. The kitchen heater is controlled by a Robertshaw BJLRA-1-1-C Thermostat mounted on the manifold of the range and is equipped with a Robertshaw Grayson TS-12-E Safety Pilot Valve with a General Control PCA Safety Pilot and AGA approved universal Gas Valves and Fittings for use with Natural, Manufactured, Mixed and L.P. gases.

The Model 136SM is identical to Model 130DM except that it has a standard backguard 36" in width.

Suffixes shown with Model Numbers designate the following:

D—DeLuxe Backguard, G—Glass Oven Door & Oven Light, M—Automatic Oven Ignition, S—Standard Backguard.

RECOMMENDATION: The Committee on Test recommends the approval of the appliance known as The Prizer Gas Range with kitchen heater, Models 130DM and 136SM

for use in New York City under the provisions of Article 12 of the Administrative Building Code including a flue connection and that the Prizer Gas Range and Heater may be installed with the approved minimum clearances in inches from combustible construction in accordance with the requirements of the American Gas Association as stated on the tags affixed to the units.

In all cases however, adequate ventilation shall be provided for and clearance shall be sufficient to allow for proper servicing. These heaters shall not be installed in garages or places of explosive atmosphere and each range shall bear a label, permanently affixed reading, "Approved by the Board of Standards and Appeals for use in New York City under Calendar Number 225-59-SA."

THE RESOLUTION—

WHEREAS, the report of a Committee on Test reads:
468-59-SA—International Dryer Corp., filed July 15, 1959 for approval of International Dryer (gas-fired) Models 27A and Mark V under the provisions of Article 12, Administrative Building Code.

USE: Appliances for drying water washed fabrics by the application of heat.

DESCRIPTION: These dryers are commercial type appliances sized for 20 lb. and 50 lb. dry weight capacity.

Model 27A consists of a gas burner installed in a burner compartment, a tumbler basket installed below the burner compartment, a drive motor, circulating fan, a lint screen on a counterbalanced door at the bottom. The components are assembled within a fibre glass insulated 18 gauge steel casing and is one piece welded construction finished with baked enamel. The machine is fully enclosed, top, sides, back and front. A circular window door opening to the tumbler compartment is provided in the front panel of the casing.

The tumbler basket is 28½ inch by 25 inches deep that revolves at approximately 41 RPM when in operation and the circulating fan draws 750 CMF of heated air through the material being dried.

Gas burners are provided with safety pilot ignition with 100% gas shut-off in case of flame failure and have a 60,000 Btu per/hr. input. Pilot assembly by Baso also has a Baso valve.

Other controls are a micro-switch mounted on the front panel which shuts off the motor and gas anytime the door is opened while the machine is in operation. The door is held closed by a catch called "Safety Lock" that allows the door to be opened from inside the machine as well as outside. There is a safety thermostat to shut-off the gas if airflow is interrupted and a control thermostat for the operating temperature (150° to 200°F).

Each dryer has a 6 inch exhaust opening in the back

MINUTES

panel of the casing, which is to be connected to a flue leading outdoors.

The Model Mark V is the same as the Model 27A with the following exception; the Btu input is 140,000 per/hr. The tumbler is 34 inch by 31 inch deep, sized for 50 lb. dry weight capacity.

INSPECTION AND TEST: A typical model 27A was inspected and tested at 306 East 180th Street, Bronx, N.Y. Present at the test were Ass't Architect T. W. Farricker, Edward I. Stern, representing the applicant. The unit functioned as designed.

RECOMMENDATION: The Committee on Test recommends that the gas fired International Dryer Model 27A and the Mark V be approved for voluntary use in New York City when installed in accordance with this report and the requirements of Article 12, Administrative Building Code, that all ports and orifices be maintained for the type of gas used and that each appliance shall bear a label, permanently affixed, reading "Approved by the Board of Standards and Appeals for use in New York City under Calendar Number 468-59-SA".
